FOREWORD

James W. Firnberg
Chancellor
Louisiana State University at Alexandria
Alexandria, Louisiana

Higher Education Financing in the Fifty States was originally published in 1979, providing comparative higher education financial data by means of one-page state reports. This, the fifth edition, builds on the pioneer work of Kent Halstead of the Office of Educational Research and Improvement and Marilyn McCoy of Northwestern University and continues the many expansions and improvements made over the years.

There is no study source available more complete than this work. The book has become more timely and comprehensive over the years, and has the advantage of a careful review by the NCHEMS staff prior to publication. Possible errors are carefully checked with the universities so that potential problems can be resolved early. Legislators, state budget officials, state higher education officers, and college and university system and campus officials will find this document useful, permitting meaningful analyses of how their financial performance relates to another state, a selected group of states, or the composite U.S.

More than ever before, we face a need for interinstitutional and interstate comparisons of financing higher education. "How are we doing compared to other states in funding our higher education system?" "Are we aggressive and successful in attracting private gifts and grants?" "How has inflation affected our funding over the past several years?" "What is the relative mix of public and private enrollment?" "Are we adequately and appropriately using our tax structure to finance higher education?" "Are we making the proper commitment to higher education?" These and a myriad of other pertinent questions can be answered by the data in this report.

Additional data sources may be found in *Comparable Data About Higher Education--A Resource Directory*, issued in March 1986 by the State Higher Education Executive Officers. Still further data sources can be located in an upcoming edition of *New Directions for Institutional Research*, edited by Paul Brinkman, which will feature chapters on data sources, methodologies for comparisons, and uses for comparative data.

Experienced analysts need not be cautioned about the use of such data. Scores of professional papers and articles have discussed problems with comparing data, and users are cautioned about making definitive decisions using these data alone. Important data cautions on page xvii in the front matter of the book and in appendix B should also be consulted.

Used properly, however, in the macro rather than the micro sense, this edition of *Higher Education Financing in the Fifty States* provides an integrated set of data essential to better understanding the higher education enterprise on a state-by-state basis.

The work begun by Halstead and McCoy, and refined by them and the NCHEMS staff through four editions, provides data with which to make sound budget decisions. I am confident it will stand as one of the more definitive works of its type for years to come.

PREFACE

This report was jointly sponsored by the National Center for Higher Education Management Systems (NCHEMS) and the Office of Educational Research and Development (OERI). We acknowledge with thanks their financial support and professional encouragement. The data were provided primarily by the Center for Statistics (CS), formerly the National Center for Education Statistics (NCES). The improved quality and timeliness of the data tapes were essential building blocks for the study. In addition, staff at many state higher education coordinating/governing boards were extremely helpful in reporting information on the type and extent of unusual funding or operating arrangements in their states.

Clara Roberts and Lynn Phillips have again provided essential leadership in the printing and production of the book. The authors also wish to acknowledge the excellent editing provided by Mary Hey.

To Paula Dressler, we extend a very special thank you for her exceptional skill and many hours of effort in once again typing and compiling this study. Her capacity to carefully transform drafts to copy is unmatched. Her cheer and good will were always appreciated. Her help in coordinating all stages of document development were key in finalizing this work.

This is the fifth edition of *Higher Education Financing in the Fifty States* (earlier editions were for FY82, FY81, FY79, and FY76). This report was designed by Marilyn McCoy and Kent Halstead and evolved from earlier work by both authors. Kent Halstead, in *Statewide Planning in Higher Education* (1974), identified the indexes related to higher education financing and the socioeconomic status of states that are used in this study. His work on measures of tax capacity, tax effort, and tax revenues is now updated regularly by the Advisory Council on Intergovernmental Relations. Also, the adjustments for inflation found in this book are based on his annual Higher Education Price Index (HEPI). Marilyn McCoy, in her work with the Statewide Analysis Task Force (which included Halstead) at NCHEMS and a subsequent panel of experts, developed the basic data system and framework used in this report. The members of those groups provided invaluable suggestions and comments in the evolution of the predecessor of this study, *State and Local Financial Support of Higher Education 1973-74*; and an even earlier version for 1972-73.

It is intended that this study be updated regularly. Recommendations for improvement in format or analysis are therefore encouraged.

SPECIAL NOTE

In the development of this report, NCHEMS has constructed a specialized data base drawing upon tapes and other published material from the National Center for Education Statistics and the U.S. Census Bureau, among others. In this report, summary data for ten categories of public and independent institutions are displayed for each of the fifty states and the District of Columbia. Similar reports *by institution* can be developed from this data base. In addition, other reports, including custom-designed reports, can be generated by NCHEMS Information Services on a cost-recovery basis. The five major categories of information available include revenues and expenditures, enrollment, faculty, programs, and research and development. For further information, contact NCHEMS Information Services at P.O. Drawer P, Boulder, Colorado 80302, or telephone 303-497-0319.

IMPORTANT CAUTIONS TO THE READER

The following precautions and explanations are provided to give readers a perspective for their reading and to prevent any misuse of the data presented in this edition.

The data presented here are for fiscal year (FY) 1984, with trend data back to FY 1980. This information is over two years old. It is mainly useful as background for understanding the mix of factors that are important in a specific state (the relative reliance on public education, the tax structure, the mix of institutions in the state). The data should either be updated or the continuation of relative relationships verified if the data are to be used in current decisionmaking regarding appropriation levels, formula funding, or the establishment of financial profiles.

In developing this study, and through review of earlier work in the field, a number of data comparability problems were identified. These problems mandate that care be taken in making interstate comparisons of certain measurements. These comparability problems are discussed in general in section 2 of appendix B and should be studied prior to reading any individual state's profile. In an effort to identify data comparability problems or other necessary clarifications, the higher education finance officers in each state are consulted, and their comments are included in the "Data Notes" section with each state's profile.

Similarly, caution is advised for those who would compare the data in this study to the data in previous editions. In particular, while totals for the public and private sectors are compatible across editions, the data by institutional type may not be, because individual institutions may be classified differently from one edition to the next.

Variations in the way states report data in postsecondary education underlie our concern regarding comparability. For example, in some states, the vocational education system is included within higher education; in others, it is a component of elementary/secondary education. Similarly, medical schools are organized and reported as separate campuses in some states; in others, they are integrated with a university. To address this particular difference, research universities and other universities are separately categorized as medical and nonmedical to indicate the existence of programs in medicine, veterinary medicine, osteopathic medicine, and dentistry within these sectors. Different state practices for capital expenditures, retirement-system payments, student aid, and for counting enrollment also contribute to comparability problems. Such problems are noted in the Data Note section for each state. Finally, the significance of the counts of faculty vary by sector. For instance, the reliance on full-time faculty (reported here) is relatively low in the two-year sector. The reader should take this into account when interpreting data using this factor.

Proper interpretation and assessment of financing higher education requires study of each state's *entire* data presentation. Isolation of a single measure or attention to a limited segment is likely to be misleading. For example, it is currently popular to focus on state appropriations per capita, a measure that ignores the different needs for funding represented by enrollment levels, the varying taxing ability of states, different strategies for utilizing tuition versus appropriations, and numerous other factors that determine and usually justify variations in per capita support.

There is no "ideal" funding pattern recommended or implied in this study, nor should good or bad connotations be attached to state rankings. States differ so greatly that many funding strategies can be considered sound.

Financing higher education is a difficult and complex process. Readers are urged to become thoroughly familiar with their state's entire financial picture before attempting evaluation of any specific operating level. The study, (like the second, third, and fourth editions) is more comprehensive than previous work of this type, as it introduces such factors as state and local government tax capacity and effort, the structure of the public higher education system, and institutional revenue and expenditure details. Yet there are voids that can be filled only with locally supplied data. Thus, information should be introduced into the analysis by knowledgeable state and local officials regarding geographical price differences, costly versus less costly academic programs, economies of scale, competition for state monies and traditional funding priorities, history of taxation, specialized accounting practices, and the role of the private sector.

The breadth of information required for sound funding decisions suggests that many different points of view about higher education should be taken into consideration. It is therefore recommended that in the analysis and interpretation of this study, the reader should consult and take into account the perspectives of postsecondary institutions, state commissions, the legislative and executive branches, the general public, and student clientele.

Recognizing that important budget decisions and resource allocations may be influenced by this study, and that valid comparative procedures are critically needed, the authors request your constructive commentary on the study design and statistical detail. Please send your comments to NCHEMS, P. O. Drawer P, Boulder, Colorado 80302.

CHAPTER 1: INTRODUCTION AND GENERAL TRENDS

Summary Findings

The fifth edition of this report updates the profile of higher education funding in the states to fiscal year 1984. Although much of the information in the ensuing pages describes fiscal and related conditions in the states for FY84, major funding and enrollment trends for the fiscal period 1980 to 1984 are also presented. Individual year data for FY84, FY83, and FY82 are also displayed to provide a context for conditions in FY84.

For two-fifths of the states, FY84 represented another year of retrenchment. Overall state and local appropriations for public higher education were increased by 7.5 percent. After adjustments for inflation (estimated at 5.4 percent, using the Higher Education Price Index) and for a .7 percent increase in enrollments, there was a net 1.7 percent increase per student in constant dollars. Twenty-three states had losses in net funding, ranging from a loss of 15.1 percent in Oklahoma to losses of less than 1 percent in seven states (Pennsylvania, Tennessee, Maryland, Idaho, Rhode Island, Massachusetts, and Nevada). Twenty-eight states showed improvements in state funding per student in constant dollars ranging from 16.7 percent in Washington to .2 percent in Wisconsin. (Refer to ranking table 44a.)

The 1.7 percent gain in the value of state funding in FY84 followed two years in which some erosion in funding support occurred, after adjustments for inflation and enrollment. In FY83, there was a small loss (2.5 percent in constant-dollar appropriations per public student), which followed an FY82 loss of 3.4 percent. Between 1980 and 1984, the average decrease in constant-dollar appropriations per student was 8.2 percent, but again losses of magnitude were widespread. Forty-one states were unable to cover the inflation rate of 36.6 percent and enrollment gains that averaged 7.3 percent. All categories of public institutions suffered losses in state funding between 1980 and 1984 except the health-professional and other professional and specialized schools. The health-professional sector showed a 7.6 percent gain in the value of state monies per student. The other professional and specialized schools fared slightly better, realizing a net gain in appropriations of 8.2 percent. In general, losses were most pronounced in the two-year academic/comprehensive institutions with declines of 12.1 percent in state appropriations per student in constant dollars. The two-year occupational colleges encountered losses of 8.2 percent. Losses for the universities were generally around 5 percent; losses at comprehensive institutions were 10.6 percent, and those at baccalaureates were 10.1 percent.

Tuition revenues kept pace with inflation and enrollments in FY84, netting a 5.6 percent increase per student in constant dollars. This was sufficient to offset the decline in state support, and overall, the net operating budgets of public institutions (excluding government grants and contracts) increased 2.6 percent in FY84. As these figures demonstrate, 1984 was a year of general improvement in the financial capacities of public higher education which followed two years of retrenchment. Losses in net state funding in FY83 and FY82 were reflected in decreases in total operating revenues of .3 and 1.8 percent respectively. The four-year loss (FY80 to FY84) in total operating funds (excluding government grants and contracts) amounted to 2.9 percent and all categories of public institutions were affected except the universities and professional schools.

The fiscal capacities of the private sector improved in FY84, FY83, and FY82 as well as for the four-year period (FY80 to FY84). On average there was a 11.3 percent real gain in the budgets of the independent sector, prompted in large measure by a 13.4 percent improvement in tuition funds. All types of institutions showed improvements in total E&G revenues except the two-year occupational schools.

Faculty salaries lost ground to inflation during the FY79 to FY83 period; although salaries increased by 36 percent in the public sector and by 39 percent in the private sectors, CPI increases amounted to 43.3 percent.

Appropriations Per Capita

Alaska led the nation in its support of higher education in 1984 by providing $341 per capita, a level three times the U.S. average of $113 per capita. Minnesota was next in its level of support at $207, followed by Hawaii at $189, Utah at $171, and North Dakota at $169. New Hampshire spent only $45 per capita on higher education, the least of any state. Note that data for this measure were not available for ten states. Other measures of need such as expensiveness of the higher education system and contributions from other sources--must be considered in order to accurately determine the adequacy of state funding. Thus, the state rankings contained in tables 1 through 3 should be used only as indications of the amounts that states appropriated to higher education, and of how the money was allocated between student aid and institutional appropriations.

State and Local Student Aid

In 1984, the majority of states supported higher education through student aid, averaging $7 per capita. Leading the nation was New York, providing $23 per capita in student aid, over three times the national average. Illinois was in 2nd place, with $16 per capita but still a level over two times greater than the national average. Minnesota was 3rd, with $13, followed by Wisconsin with $10. Thirty-three states provided support to students attending public institutions, and 25 states provided aid to students attending independent institutions. Traditionally, student aid has been the province of the federal government, and the figures in this study indicate that while state student aid is growing, the states still have a relatively minor role. Note that data for this measure were not available for ten states.

Appropriations to Institutions

Over 93 percent of state funds allocated to higher education went directly to institutions. On average, the states spent $105 per capita in 1984 for institutional support, and almost all of those funds went directly to public institutions. On average, states provided only $1. 40 per capita to independent institutions led by New York at $6. 50 per capita and Pennsylvania at $4. 30 per capita (see table 3c). When this support and the large student-aid program for the independent sector are combined, New York led the nation in state support of the private sector.

State Tax Base and Budgets

There are major disparities between the states in the extent of taxable wealth. The typical rate of taxation in 1983 yielded $1,176 per capita, but Alaska, the state with the greatest capacity to tax ($3,198 per capita), had almost three times the resources of Mississippi, the poorest state (with a capacity of only $802 per capita). When a representative-tax-system measure was applied, the five wealthiest states in tax capacity were Alaska with $3,198, Wyoming with $2,145, Nevada with $1,731, Connecticut with $1,456, and Texas with $1,454 (see table 4). In recent years, the states have become acutely aware of the value of energy-related resources in determining their economic circumstances. Since this measure of tax capacity did not include mineral reserves, only extractions, the wealth of such states as Texas, Alaska, Louisiana, North Dakota, Wyoming, and Colorado was probably understated.

Table 4 shows the relative positions of the states in tax capacity, table 5 shows their utilization of this capacity (tax effort), and table 6 shows the resulting revenues they raise. As these rankings make clear, the states vary in both their inherent wealth and their willingness to tax. Alaska, with the largest capacity (based on such things as combined economic strength in sales, property, income, and severance-related taxes), also had an extremely high tax effort (66 percent above average) and collected tax revenues that were four and one-half times the U.S. average. Mississippi, with the lowest tax capacity, taxed at a rate just 5 percent below the national average; yet it still ranks near the bottom in revenues because of its inherent lack of wealth. States highly taxed during this period included Alaska (66 percent above average), New York (63 percent above average), the District of Columbia (46 percent above average), Wisconsin (37 percent above), Michigan (28 percent above), Rhode Island (26 percent above), and Minnesota (24 percent above). Table 5 provides these tax rates.

States also varied substantially in how they utilized state revenues. The typical state budget in 1984 provided 26 percent for elementary/secondary education, 13 percent for welfare, 11 percent for public services, 10 percent for higher education, 9 percent for health and hospitals, 8 percent for highways, and the remaining 23 percent for a variety of other state functions. Higher education and public welfare increased their share of state budgets in FY84 compared to 1980, while elementary/secondary education and highways received less. Individual states have markedly different priorities. Table 10 shows the total level of state expenditures in 1984, based on a Census Bureau report on governmental finances. These amounts include expenditures from state tax revenues, other state funds, and federal revenue-sharing monies. Alaska spent more than any other state on public functions, $8,729 per capita, while Arkansas spent the least, $1,478 per capita. North Carolina and Utah spent the largest share of their state budget on higher education, allocating 14. 3 percent of their funds to this use. Arizona, Delaware, and Iowa also placed a major emphasis on higher education, providing 13. 6 percent. The District of Columbia spent the lowest share on higher education, only 3. 2 percent of its budget. Massachusetts also ranked low in this category, spending only 5. 0 percent of its budget on higher education (see table 11). There were also important differences between the states in the budget shares allocated to elementary/secondary education. Texas, Arkansas, and Montana all allocated 30 percent of their funds to elementary/secondary education (see table 12). At the other end of the spectrum, the

District of Columbia, Hawaii, Nevada, and Alaska assigned relatively small shares (from 15 to 20 percent).

Population and Enrollments

In the United States in 1984, the hypothetical average-size state would have had 4.5 million people, approximately 172,000 of them enrolled as full-time students. In reality, neither population nor enrollments were that evenly distributed. For instance, seven states had over 10 million people: California had 24.9 million, New York had 17.6 million, Texas had 15.6 million, Pennsylvania had 11.9 million, Illinois had 11.4 million, Ohio had 10.7 million, and Florida had 10.6 million (see table 13). Thirteen states had fewer than 1 million people each, with Alaska having fewer than 500,000 people.

California had the largest number of students in higher education, over 1 million FTE enrollments. New York was second largest, with 739,739 students. Texas, Illinois, Pennsylvania, Ohio, Michigan, and Massachusetts also had very large student populations, between 310,000 and 575,000 each. By contrast, 14 states had enrollments below 50,000, a very small number given the average size of institutions (see table 14).

Selection of Public or Private Institutions

On average, 78 percent of students attended public institutions. In 12 states--Wyoming, Utah, Nevada, Alaska, New Mexico, North Dakota, Idaho, Arizona, Delaware, Montana, Mississippi, and Hawaii--90 percent or more of the students were in public institutions. This high concentration of students in public institutions created a concomitant need for additional public support for higher education. In comparison, those states with greater reliance on independent institutions for the education of their populace needed less public support. (Tables 17 and 18 provide rankings of the states in public and independent enrollments.) The District of Columbia was almost entirely private in enrollment, with 87 percent of students in such institutions. Massachusetts followed closely behind, with 58 percent of the students enrolled in independent institutions.

Graduate Enrollments

States vary greatly in the size and structure of their higher education systems. One component that affects the need for funding is the amount of graduate education required in the state. On average, 8 percent of public enrollments in the United States are at the graduate level. Leading the nation, Iowa, and Kansas had 12 percent of their students studying at the graduate level; next were Connecticut, Georgia, Indiana, Nebraska, New Mexico, and West Virginia, which had 11 percent of their enrollments at this level. By contrast, New Hampshire's public systems were almost entirely undergraduate, with only 4 percent of the students at the graduate level. Similarly, Nevada, Massachusetts, the District of Columbia, California, and Alaska were relatively low in graduate emphasis, with only 5 percent of public students at this level. Given the relative expensiveness of graduate-level study, these ratios translate into greater or lesser needs for state and other forms of financial support. Tables 20-25 chart these differences between the states, in total and by selected types of institutions.

Public Institutional Finances

At public colleges and universities, state and local appropriations are the most important source of funds, representing 58 percent of the E&G revenues received by those institutions. Tuition and fees are next in importance, accounting for 19 percent of funds, followed by government grants and contracts with 13 percent. Because of the centrality of funding from these sources, rankings of the states are provided by source and class of institution, in tables 26a-k, 27a-k, 28a-k, and 29a-e. Tables 53a-e show rankings of the states by percentage share contributed by major revenue sources.

State and Local Appropriations per Student

In 1984, the average state provided $3,695 per student for public higher education institutional support. The amount of appropriations per student is a critical measure of state effort because it measures the state's contribution relative to the number of students being educated within its public system. As is evident in tables 26a-k, the states varied considerably in their support of public students, both in total and by category of institution. Alaska led the nation, providing $11,516 per student, and was followed by the District of Columbia, $7,900; Wyoming, $6,606; Hawaii, $4,779; and Kentucky, $4,714. New Hampshire provided the least per student, $1,887, followed by Vermont, $2,142; South Dakota, $2,600; Massachusetts, $2,758; and Pennsylvania, $2,871. More relevant indications of public-student support are provided for each category of public institution. Table 26b, for example, shows the relative support provided by states to public research universities that include medical programs in their curricula. New York led the nation in this category, providing $13,037 for each FTE student, a level over twice the national average of $5,934 for students attending similar schools. Table 26f shows state distribution of support for comprehensive institutions. Alaska led the nation in this category, providing $14,496 per student. On average, however, states typically spent $3,309 to support students in these institutions. Rankings in state support per student for other categories of institutions are shown in tables 26a-k. In fiscal year 1984, the averages and ranges of state support levels per student by type of institution were as follows:

Categories of Institutions	U.S. Averages	High State	Low State	Ranking Table
Public, total	$ 3,695	AK-$11,516	NH-$ 1,887	26a
Research univ., medical	$ 5,934	NY-$13,037	CO-$ 3,130	26b
Research univ., nonmedical	$ 4,974	CA-$12,958	CO-$ 2,014	26c

Other professional & specialized	$ 4,100	TX-$10,222	GA-$ 1,992	26k

Tuition and Fees Revenues

Tuition and fees provided a far smaller share of revenues at public institutions than at independent institutions, 19 percent versus 53 percent. However, for public institutions with tuition-setting authority, tuition and fees represent the key source of revenues for budget balancing. Typically, there is a trade-off between state appropriations and tuition, with the latter providing the residual operating capacity not covered by state appropriations. Although in 1984 the states collected, on average, $1,192 per student in tuition and fees, there were substantial deviations from this norm among the states. Vermont collected the largest amount from tuition, $4,063 per student. Tuitions for New Hampshire at $2,530, Pennsylvania at $2,301, Delaware at $2,251, Ohio at $1,991, Michigan at $1,809, and Colorado at $1,787 likewise provided an important source of funds, at levels 50 percent or more above national rates. By contrast, Oklahoma relied less on tuition funds than any state, collecting only $579 per student in support. Other states collecting low tuition revenues per student included Texas at $628, Hawaii at $630, North Carolina at $707, Wyoming at $708, the District of Columbia at $739, California at $742. Table 27a provides these distributions for the public sector as a whole. Tables 27b-k provide rankings of the states for specific categories of institutions. Averages, highs, and lows in tuition and fees per student in FY1984 by institutional group were as follows:

Categories of Institutions	U.S. Averages	High State	Low State	Ranking Table
Public, total	$1,192	VT-$4,063	OK-$579	27a
Research univ., medical	$1,926	PA-$3,911	OK-$729	27b
Research univ., nonmedical	$1,756	PA-$3,092	TX-$503	27c

Total Education and General Revenues

The foregoing rankings of state appropriations and tuitions indicate the extent to which the states and particular types of institutions within the states rely on these sources for funding. The combined effect of this funding, along with support from endowments, gifts, and other sources, is reflected in total E&G revenues. These amounts, which exclude revenues from government grants and contracts, represent institutional resources available for support of general and primary operations, including functions such as instruction, academic support, student services, and administration. On average, U.S. public institutions have $5,625 per student for such operations. Alaska leads with $14,098 per student in the public sector, followed by Wyoming with $9,442, the District of Columbia with $9,148, and Vermont with $8,206. However, these all-inclusive summary measures for the public sector are less useful than specific values for each type of institution. By category of institution, the averages and range values for total E&G revenues per student in FY1984 were as follows:

Categories of Institutions	U.S. Averages	High State	Low State	Ranking Table
Public, total	$ 5,625	AK-$14,098	OK-$ 4,152	28a
Research univ., medical	$10,218	NY-$20,958	OK-$ 5,745	28b
Research univ., nonmedical	$ 8,227	CA-$17,036	CO-$ 5,770	28c
University, medical	$ 7,609	KY-$10,610	SD-$ 5,125	28d
University, nonmedical	$ 6,108	WY-$12,313	TN-$ 4,147	28e

Health professional	$50,054	CT-$89,638	WV-$14,044	28j
Other professional & specialized	$ 6,223	NC-$13,255	GA-$ 2,601	28k

Government Grants and Contracts

Government, principally the federal government, is the major sponsor of research and other contracted activities at colleges and universities. Overall, these government revenues provided 13 percent of public institutional revenues. However at some types of public institutions, the share contributed by this source of funds was much higher. The level of funds provided through government grants and contracts for research and other universities is shown in tables 29a-e, in dollars per faculty member. These schools conduct the bulk of research and hence receive the majority of government grants and contracts. The figures use the headcount of 9- and 10-month faculty. If large numbers of faculty are on 11- and 12-month contracts, the numbers shown will be overstated, since these faculty members are not counted and hence do not appear in the denominator. The averages and ranges for government grants and contracts per faculty member in FY1984 were as follows:

Categories of Institutions	U.S. Averages	High State	Low State	Ranking Table
Public, total	$21,724	AK-$ 63,414	MO-$10,238	29a
Research univ., medical	$65,025	NY-$362,230	LA-$16,032	29b
Research univ., nonmedical	$44,746	GA-$129,607	SC-$12,086	29c
University, medical	$28,627	NV-$ 52,719	MO-$ 7,943	29d
University, nonmedical	$16,499	OR-$ 36,812	NC-$ 2,918	29e

Instruction Expenditures

The primary function at most public institutions is teaching and educating students. Hence, relative expenditures for instruction are an important measure of pedagogical emphasis among the states. National averages indicate that in 1984, public institutions spent an average of $2,706 per student for direct instruction. The range of expenditures by type of institution was substantial, with health-professional institutions spending the most, $23,775 per student, and two-year academic/comprehensive institutions spending the least, $1,655 per student. Tables 30a-k show these variations, by state, for each category of institution.

Research Expenditures

On average, public institutions spent $18,304 per faculty member for research. However, public research universities (with medical programs) spent an average of $77,466 per faculty member, with one state, New York, showing $679,001 per faculty member (this number is probably an error caused by an undercounting of faculty). Nonmedical research universities spent $57,284 per faculty member, while nonresearch universities spent on average $20,003 and $14,465 per faculty member, depending on whether their institutions did or did not have medical and related programs. Tables 31a-e provide these rankings.

Independent Institutional Finance

Tuition and fees are the primary source of funds for independent institutions, contributing 53 percent of revenues. Income from government grants and contracts was next in importance and provided 17 percent of funds, followed by gifts, providing 13 percent; endowments, providing 8 percent; state and local appropriations, providing 2 percent; and other diverse sources, providing 11 percent. (See rankings 44a-e for state variations in these patterns.) For independent institutions, tuition, gifts, and endowments are the key sources of funds that support general operations.

State and Local Appropriations

State and local appropriations are a very minor source of financial support for private institutions and usually are provided to assist specific numbers of state residents enrolled in particular programs such as medicine, veterinary medicine, and nursing. Texas led the nation at $642 per student (see table 32).

Tuition Revenues

The average U.S. private institution collected $5,450 per student in tuition and fees, but the range spanned from a high of $6,778 in Massachusetts to a low of $2,419 in Arizona. Table 33 shows the variations by state.

Total E&G Revenues

The key concern of all institutions is the total amount of operating funds. As indicated in the preceding tables, the average public institution functioned with $5,625 per student. The average private institution had $8,709 per student for operating support, an amount 55 percent greater than that of public institutions. However, these averages obscure differences in the numbers and types of institutions that exist in the public and independent sectors. For instance, in the public sector, two-year institutions and comprehensive institutions greatly outnumber other types of schools, and concomitant numbers of students are enrolled in them. For the independents, baccalaureate schools are more numerous and represent a substantial share of private sector enrollments. Universities are a key component of each sector. Importantly, independent institutions are substantially more graduate in their orientation (19 percent versus 8 percent at public institutions) as well as being smaller on average (1,583 students versus 4,677 students at public institutions). Both of these conditions imply higher expenses for the private sector. Tables 34a-k provide rankings of the states for different categories of independent institutions in terms of total E&G revenues per student, excluding funds from government grants and contracts. Independent institutions showed the following averages and distributions in total E&G revenues per student in FY1984:

Categories of Institutions	U.S. Averages	High State	Low State	Ranking Table
Independent, total	$ 8,709	MD-$15,451	AZ-$ 2,891	34a
Research univ., medical	$17,346	MD-$33,205	FL-$10,343	34b
Research univ., nonmedical	$21,900	CA-$30,284	PA-$17,743	34c
University, medical	$12,281	NH-$21,667	WI-$ 6,727	34d
University, nonmedical	$ 8,548	TX-$11,791	OH-$ 4,554	34e
Comprehensive	$ 6,790	WI-$95,031	NH-$ 3,627	34f
General baccalaureate	$ 6,722	ME-$11,351	MT-$ 4,008	34g
2-year academic & comprehensive	$ 4,638	VT-$ 9,704	ND-$ 374	34h
2-year occupational	$ 3,524	SD-$ 6,285	AZ-$ 956	34i
Health professional	$38,162	TX-$95,380	IA-$14,943	34j
Other professional & specialized	$ 6,379	VA-$17,821	ME-$ 1,648	34k

Government Grants and Contracts

The typical private institution received $37,918 per faculty member in government grants and contracts. The range of this support, however, varied tremendously by state, with private institutions in Maryland receiving $107,172 per faculty member and those in Idaho receiving $4,393 per faculty member. There was also substantial variation among types of institutions. Research universities with medical programs received on average $155,657 per faculty member; those without medical, $134,110 per faculty member. Universities with medical programs received $50,040 per faculty member; those without medical, $20,047 per faculty member (see tables 35a-e).

Instruction Expenditures

Independent institutions, like public institutions, showed parallel variations in instructional expenditures by type of institution. On average, private institutions spent $3,758 per student on instruction. These expenditures varied from an average high of $9,020 for research universities with medical programs to an average low of $1,356 per student for two-year occupational institutions. Tables 36a-k show these distributions by type of institution.

Research Expenditures

On average, independent institutions spent $24,294 per faculty member in research, ranging from $67,851 in Maryland to $15 in Montana. In most states, the independent institutions spent less than $20,000 per faculty for research. (See tables 37a-e for state differences.)

Recent Trends

State and Local Appropriations

Percentage Change between 1983 and 1984. In absolute dollars, unadjusted for shifts in inflation and enrollment, states increased their support for public higher education in FY84 by an average of 7.5 percent. Actual circumstances, however, varied substantially from state to state. At one end of the spectrum is Washington, with a funding increase of 22.3 percent. At the other extreme, Oklahoma experienced a 7.2 percent decline in public funding for higher education. North Dakota, Virginia, Hawaii, and California also experienced funding declines but not of that severity (tables 38a-l).

Percentage Change between 1982 and 1983. State funding increases in FY83 were less than in FY84. On average, states boosted their support of public higher education by 5.0 percent, with six states showing a decrease of funding support. Typically, oil-producing states showed the greatest improvements, led by Wyoming with a 79.5 percent surge in appropriations for public higher education. Following were Alaska, with a 21.4 percent increase, Oklahoma (16.7 percent), and Maryland (14.7 percent) (tables 39a-l).

Percentage Change between 1980 and 1984. Between FY80 and FY84, average state and local appropriations increased 34.6 percent for public institutions and 32.4 percent for independent institutions. During this period, appropriations for public institutions increased in all states, ranging from an 96.6 percent increase in Wyoming to a 12.1 percent gain in South Dakota. Increases in state and local appropriations by type of institution were as follows:

Categories of Institutions	Percent Change in State & Local Appropriations 1980-1984	Ranking Table
Public, total	34.6%	40a
Research univ., medical	33.0	40b
Research univ., nonmedical	40.2	40c
University, medical	27.0	40d
University, nonmedical	35.3	40e
Comprehensive	28.6	40f
General baccalaureate	36.0	40g
2-year academic & comprehensive	33.8	40h
2-year occupational	43.7	40i
Health professional	51.9	40j
Other professional & specialized	69.6	40k
Independent, total	32.4	40l

Enrollments

Percentage Change between 1983 and 1984. Across the U.S., enrollments at public institutions gained an average of .7 percent between FY83 and FY84. Alaska led the nation with a 6.7 percent increase in students, followed by Texas (with gains of 5.2 percent). Enrollments decreased in 16 states, with California showing the greatest loss (3.4 percent). Increases were strongest in the general baccalaureate institutions. Enrollments decreased in the medical and nonmedical research universities, the medical university, and the two-year occupational colleges.

In the independent sector, the gains in enrollment were slightly larger, enrollment growing by 1.2 percent. Hawaii ranked 1st with an increase of 29.4 percent. Twelve states saw enrollments shrink in the independent sector (tables 41a-l).

Percentage Change between 1982 and 1983. Enrollment in the public sector between FY82 and FY83 increased by 1.0 percent. Alaska had an increase of 11.7 percent, but in most states the gains were between 2 and 5 percent. Fifteen states had enrollment losses; in Washington enrollment fell by 7.2 percent. In the private sector, enrollment declined by 1.3 percent (tables 42a-l).

Percentage Change between 1980 and 1984. Public enrollments from FY80 to FY84 increased by 7.3 percent on average. The largest rates of growth were in Alaska, at 56.3 percent; Wyoming, at 23.6 percent; Nevada, at 22.8 percent; Iowa, at 19.3 percent; and Louisiana, at 17.2 percent. Four states experienced declines in public FTE enrollment: Washington (11.5 percent), Oregon (3.0 percent), the District of Columbia (1.9 percent), and Connecticut (.9 percent). Enrollment gains in the public sector were greatest in the other professional institutions (14.8 percent) and the two-year occupational schools (14.6 percent). The medical universities were the only category of public institutions with losses, enrollments dropping by .8 percent. Enrollments at independent institutions also increased during this period by 4.5 percent. Only eight states didn't share in these gains. Enrollment decreased in the private sector in New Mexico by 22.7 percent, in Idaho by 15.8 percent, and in New Jersey by 11.6 percent. Again, changes in enrollment varied by type of institution:

Categories of Institutions	Percent Change in Enrollments 1980-1984	Ranking Table
Public, total	7.3%	43a
Research univ., medical	3.2	43b
Research univ., nonmedical	2.8	43c
University, medical	-.8	43d
University, nonmedical	4.7	43e
Comprehensive	5.3	43f
General baccalaureate	10.7	43g
2-year academic & comprehensive	11.4	43h
2-year occupational	14.6	43i
Health professional	3.5	43j
Other professional & specialized	14.8	43k
Independent, total	4.5	43l

Constant-Dollar Revenues per Student: Appropriations

Percentage Change between 1983 and 1984. State appropriations increased by 1.7 percent between 1983 and 1984, when inflation and a .7 percent increase in enrollments are taken into account. However, almost one-half of the states experienced some loss in this regard: 16 with losses of 5 percent or less, 5 with losses between 5 and 10 percent, and 2 with losses greater than 10 percent. Oklahoma had the greatest decline, as the purchasing power of state funding fell by 15 percent. These state-by-state rankings are shown in tables 44a and b.

Percentage Change between 1982 and 1983. State appropriations diminished by 2.5 percent in FY83 in comparison to the prior year. More states were impacted than in FY84, though, as 36 states faced some degree of funding loss. Thirteen states had losses greater than 5 percent (tables 47a and b).

Percentage Change between 1980 and 1984. Overall, between 1980 and 1984, public institutions experienced an 8.2 percent loss in the real-dollar value of their appropriations, after adjustment for inflation and enrollment gains. For four-fifths of the states this was a belt-tightening period, and purchasing power declines ranged from 24.6 percent in South Dakota to less than 1 percent in Arizona. Six states had losses greater than 20 percent: South Dakota (24.6), Alaska (23.2), Nevada (23.0), Missouri (21.7), Illinois (21.7), and Idaho (21.0).

Among the states that did well in this period were Wyoming, with constant-dollar gains per student of 16.5 percent, Texas with 10.9 percent and Montana with 10.3 percent.

State funding to the independent sector declined by 7.3 percent during this period in constant dollars. Substantial decreases were evident in Minnesota, North Carolina, Iowa, and Indiana. Other states had significant though lesser losses (see tables 50a and b).

Constant Dollars per Student: Tuition and Fees

Percentage Change between 1983 and 1984. Tuition increases in FY84 were sufficient to cover both inflation and enrollment growth, netting a 5.6 percent improvement in tuition revenues per student. All sectors produced some real-dollar growth in revenues from tuition. Most states participated in these improvements, with public institutions in 40 states and independent institutions in 38 states showing some net gain. Eleven states, however, experienced net losses in the public sector in funds from tuition with Wyoming losing 24.1 percent of the purchasing power of tuition revenues. California had the greatest gains, totaling 37.0 percent. Hawaii was next with a gain of 34.6 percent (tables 45a and b).

Percentage Change between 1982 and 1983. Net gains in tuition funds occurred in the public sector in FY83, amounting to 6.1 percent. Forty-one states showed improvement in funding from tuition. The overall pattern for the independent sector was similar (a gain of 6.3 percent).

Percentage Change between 1980 and 1984. Between 1980 and 1984, the real value of tuition and fees per student increased by 14.4 percent in the public sector and by 13.4 percent in the independent sector. Given the heavy reliance of independent institutions on tuition, these gains were particularly important. As indicated in table 51b, the independent sector made real-dollar gains in tuition in 43 states and experienced declines in 5 states. For public institutions, real-dollar gains in tuition were also prevalent. Forty-four states obtained tuition improvements, led by California, which had real-dollar gains per student of 66.5 percent. By contrast, Wyoming had a loss of 16.0 percent. These figures are shown in full in tables 51a and b.

Constant Dollars per Student: E&G Revenues

Percentage Change between 1983 and 1984. FY84 was a year of improvement in funding support in the public sector (excluding government grants and contracts), once revenues were adjusted for inflation and enrollment shifts. On average, public higher education saw its revenue base increased by 2.6 percent. Only fourteen states experienced losses, with decreases ranging from 12.2 percent in Oklahoma to .2 percent in Hawaii. Washington showed the largest gain of 12.9 percent. In the independent sector the profile was similar. On average, there was a gain of 3.8 percent in total funding, after adjustment for inflation and enrollment. Thirty-seven, or three-quarters, of the states had some net gain. Still, in 11 states the independent sector had to operate with fewer funds (in constant-dollar terms) than the year before (tables 46a and b).

Percentage Change between 1982 and 1983. FY83 was a year of retrenchment in total funding support for the public sector. Net revenues decreased by .3 percent in FY83, and one-half of the states had a net loss. In the independent sector, there were gains (4.5 percent). Only 12 states in the independent sector was not able to keep pace with inflation and enrollment shifts (tables 49a and b).

Percentage Change between 1980 and 1984. Between 1980 and 1984, the net effect of revenue changes for higher education was an overall retrenchment in the funds available in the public sector (average of 2.9 percent decline) and an 11.3 percent improvement in the independent sector, even after adjustments for enrollment changes and inflation.

Gains in total funds in the public sector were evident in only 21 states, and in the independent sector they were evident in 37 states. South Dakota in particular suffered a serious loss in its public-sector purchasing power, which fell 20.2 percent per student.

Importance of Different Revenue Sources

In 1984, there were major differences between the states and between the public and private sectors in the means of financing higher education. For public institutions, state and local appropriations provided the lion's share of funds, representing 58 percent of all revenues. Tuition was next in importance, accounting for 19 percent of revenues, followed by government grants and contracts at 13 percent. These three sources furnished nearly 90 percent of the E&G funds allocated to public higher education. For the independent sector, tuition carried the major load, 53 percent; government grants and contracts contributed 17 percent; gifts, 13 percent; and endowment income, 8 percent.

There were major variations among the states in their reliance on these sources. For example, the public sector in the District of Columbia received 77. 3 percent of its funds from local sources (in its case, federal), followed by Oklahoma, 69. 7 percent; Hawaii, 67. 7 percent; Alaska, 67. 1 percent; California, 66. 7 percent; and Louisiana, 66. 1 percent. These states/localities assumed an unusually large role in the financing of public higher education. At the other end of the spectrum were states like Vermont, whose state and local sources provided only 22. 3 percent; New Hampshire, 32. 8 percent; Delaware, 41. 0 percent; Colorado, 41. 6 percent; Delaware, 41. 0 percent; and Pennsylvania, 44. 9 percent (table 53a). These states carried far smaller shares than the nearly 60 percent load that was typical of the other states. To compensate to some degree, each of these states collected large shares of their revenues from tuition (generally more than 20 percent) and ranked among the top 10 in the country in their reliance on tuition as a source of funds.

Independent institutions showed an even greater degree of variability in reliance on tuition, ranging from a high in Vermont of 76. 9 percent to a low in Alaska of 22. 0 percent (table 54b).

Tables 53a-e provide rankings of the states for public institutional reliance on various funding sources. Comparable data for private institutions appear in tables 54a-f.

Faculty Salaries

At every rank, faculty at public institutions in Alaska were the best paid, and Alaska had the highest overall average salary in 1983. However, the well-known high cost of living for Alaskans was not factored into these salary levels. Alaska was followed by California, New York, Arizona, and New Jersey. Faculty at public institutions in Oklahoma showed the greatest rates of increase in salaries between 1979 and 1983, gaining 53 percent. Faculty in public institutions in Wyoming were next, with salary gains of 47 percent for the period. At the other end of the spectrum, faculty in the District of Columbia's public sector gained only 23 percent; Oregon, 24 percent; and Mississippi, 28 percent. Tables 55a-e provide public-sector rankings by state for average salaries and percentage changes in salaries.

In the independent sector, California faculty led the nation in average salary for all ranks (19 percent above average). Between 1979 and 1983, private faculty salaries improved by 48 percent in Idaho, 47 percent in California, and by 45 percent in Texas. Tables 56a-e provide these figures for independent institutions by state.

The remainder of this chapter presents state rankings for the key measures used in this study (a listing of the tables begins on page vii).

CHAPTER 2: METHODOLOGY

State and local governments are by far the largest financial supporters of higher education in the United States. Efforts to evaluate state appropriations and to identify potential changes in the states are therefore critical to successful financing in the public sector, and are also of great interest to the private sector. This report, focusing on comparisons among the states, is intended to aid in this process. Two general guidelines have been followed:

- The broadest possible approach has been taken, in order to point up the substantial differences among states in the conditions that affect financing. Thus the study includes information about the different economic conditions in the states, the extent to which other public services compete with higher education, the relative importance of private higher education, and other fundamental conditions that affect higher education financing in the state. An understanding of these basic differences is essential to the informed development of policies for financing.
- Much detail has been provided on the specifics of institutional financing, to establish data comparability as well as important benchmarks and guides so that meaningful comparisons can be made.

Thus the study presents both a macro view of financing at the state-budget level and micro detail about institutional revenues and expenditures. Each state profile provides diverse data for the reader, ranging from the state tax base to a breakdown of expenditures by particular institutional function. Much of the data is interrelated to show the consequences of increases or decreases in one or more of the elements. Thus it is possible to determine, for example, that low state appropriations per student may result from a low tax base, a low tax effort, competing public services, a low allocation rate, heavy reliance on tuition, an education system that emphasizes more expensive forms of higher education, or any combination of these factors. To fully understand state support levels, information on all of these factors is necessary.

NEED AND RESPONSE

Two recent developments made it easier and increased the incentive to produce this study. First, the collection of financial data by the National Center for Education Statistics (NCES) has vastly improved since NCES first produced the *Higher Education General Information Survey* (HEGIS) in 1966. The HEGIS data base is consistent, detailed, comprehensive, and essentially responsive to national statistical requirements. NCES is continuing to work on the data-collection system and on definitions, in order to overcome long-standing problems in data comparability.

Second, since the data have improved, the higher education community would like to see the statistics effectively communicated. Legislators and college officials are well aware of the potential use for published data that can clearly document financial needs and provide sound justification for funding requests. Their need for such data is multiplied now that austerity in government spending and increased competition for funding among public services demand rigorous budget presentations.

This study has also been prompted by the need for an analysis of financing that goes beyond a few simple aggregate measures. Such measures, although commonly used, are entirely inadequate and often misleading. As one example of how state rankings for a single measure can be misinterpreted, consider appropriations per capita. Of the states that rank lowest in the United States for this measure, only one has a substantially underfinanced education system (compared to the norm). The others have nearly average total operating funding per student, either because state support is supplemented by high tuitions or income from other sources, or because there are fewer students to educate.

This study gathers and organizes a comprehensive set of state-level financial and supporting statistics on higher education. However, regardless of how detailed and thorough any study of financing is, all conditions affecting higher education cannot be accounted for, and many cannot be measured. Therefore, the data must be interpreted with the understanding that unique circumstances within the states can lead to a wide range of acceptable practices. For example, the level of appropriations is not so much a consequence of legislative action as it is of evolving conditions determined by many factors: educational-opportunity objectives, student financial-aid programs, the role of private institutions, government wealth, preparation of high school graduates to attend college, and geographical access. No financial study can possibly replicate this complexity or substitute for local knowledge, interpretation, and judgment.

Comparisons between states are inevitable. This study assumes that such comparisons, when made with some understanding of underlying factors, are of value in establishing perspective, identifying alternative financial policies and practices, and helping to set realistic support goals.

STUDY DESIGN AND ORGANIZATION

In conducting the study, the first step was to develop an approach to higher education financing that included as many as possible of the relevant components of the basic conditions in a state and in its higher education system. This resulted in the inclusion of data on enrollment, state and local government fiscal analyses, institutional structuring within the public and private sectors, conditions related to and affecting financing, and institutional revenues and expenditures.

The data for each state have been organized by topic, with each topic presented on a separate page. While these divisions serve to focus attention, the topics are interrelated and should be studied jointly.

A variety of measures have been used, each type serving a different purpose: (1) absolute amounts, which permit verification of the base data; (2) relative terms (based on user or load units), which establish comparability; (3) percent distribution, which identifies relative contribution; (4) constant dollars, which illustrate trends in purchasing power; and (5) indexes with respect to the U.S. average (printed in bold print) and state ranking, which establish relative positions.

The principal means of analysis is interstate comparisons. Every effort has been made to allow for fair and meaningful comparisons. However, limitations in the data collected, the variability of accepted practice, and the distinctive nature of each institution make state comparisons more general guides to relative behavior than exact measurements. In every instance, these statistics should be supplemented when possible with local information and judgment.

The study is designed for use in the following types of analyses:

- Review of higher education's share of the state and local budget, higher education being one of many competing public services
- Evaluation of the role of state tax capacity, tax effort, and allocation rates in establishing appropriations to support higher education
- Study of tax capacity and tax effort for each type of tax as a means of assessing tax policy
- Review of the distribution of state appropriations to institutions and to students
- Study of FTE enrollment in comparison with national averages
- Identification of a state's student-enrollment pattern by type of institution within the public and independent sectors
- Evaluation of state and local appropriations and other revenues on a per-student or other-user basis by type of institution
- Evaluation of various institutional expenditures on a per-student or other-user basis by type of institution
- Review of trends in state and local government appropriations by type of institution relative to requirements imposed by enrollment growth and inflation
- Study of trends in tuition revenues as a percentage of instructional expenditures by type of institution
- Study of the effects of inflation on state and local appropriations, tuition and fees, and total educational and general revenues, and the associated gain or loss in purchasing power
- Study of trends in the mix of support for higher education by revenue source
- Study of the level and trends in faculty salaries by rank and by type of institution

The focus of this report is the states. Chapter 1 provided a summary of national trends and state patterns and provided state rankings on state and local government finances, population and enrollment, institutional financing for public and private institutions, trend data, and faculty salaries. This chapter describes the methodology used in this study and in the state by state reports in chapter 3. Chapter 3, which is the focal point of this study, presents individual state reports for all 50 states and the District of Columbia, as well as the U.S. average.

Appendix A includes a listing of all institutions by state, grouped by institutional category, and explains the classification system used in this report. Appendix B presents documentation on the sources of data used in this report, and cautions on data use.

EXPLANATION OF THE STATE-REPORT ANALYSIS

Each state report presented in chapter 3 consists of eight pages and is divided into eight topics: Commentary; State Financing of Higher Education; Public Institutions: Status Report; Independent Institutions: Status Report; Trends; Inflation-Adjusted Trends; Faculty Salaries; and Institutional Descriptors and Data Notes.

Commentary

A commentary introduces each state report. Each commentary follows a basic format, but special attention is given to unique state conditions and accomplishments. Each state commentary describes recent trends, state financing of higher education, state tax base and budget, higher education enrollments, and institutional finance and characteristics. Some questions to which the commentary responds are:

- Have state and local government appropriations kept pace with enrollments and inflation, in order to preserve the purchasing power of institutions?
- What are the significant trends in appropriations and tuition for each type of institution?
- How wealthy or poor is the state in terms of its ability to support public programs through taxation, and to what extent has this tax potential been tapped?
- How important is higher education in the state budget when compared to other public services?
- Is the state's allocation of tax revenues to higher education consistent with enrollment levels and tuition policy?
- What is the structure of public and private higher education in the state? Which types of institutions enroll the most students, and how do enrollment patterns affect financial requirements?
- How do expenditures per student compare with national averages for each type of institution? In particular, how do the institutions with the largest enrollments fare in this measure of financial strength?
- How do appropriations and tuition contribute to the adequacy or inadequacy of institutional revenues?
- To what extent do sources other than state government and students contribute to institutional support? Do any types of institutions appear excessively dependent on a single source of income?
- How has the mix of revenues by source changed over time, and what are the implications for future financing if the trend continues?
- How does the emphasis on graduate education or the size of institutions affect the financial requirements of institutions?
- What is the overall position of faculty salaries in the state? Where are the strengths and weaknesses? Is the situation improving or worsening?

State Financing of Higher Education

The first data page of each state report includes background information on the state to provide a context for assessing state and local government support of higher education. Included on this page is a profile of the state's population and enrollment, its tax structure, the amount allocated to higher education, and finally, the distribution of state and local appropriations within the higher education system and among the various other functions of government.

State and Local Government Support of Higher Education. Although government funding decisions are developed in a context of historical precedents and current political and citizen pressures, they nevertheless ultimately depend on the state's wealth and how it is secured and used in terms of tax rates and allocation percentages. The figures in the arrow on this page give a picture of this reality. Beginning at the left, tax capacity (the amount of revenue the state and local government would raise if a national uniform set of tax rates were applied) is multiplied by tax effort (the extent to which a state taxes its available resources) to equal state and local government tax revenues collected. These tax revenues are then multiplied by the percentage of taxes allocated to higher education (for general institutional support, student aid, and "other" support) to equal the dollar amount appropriated to higher education by state and local governments. Tax capacity is fixed by the state's economy and is relatively stable; both tax effort and the allocation rate can be changed by legislative action.

The table above the arrow presents dollars per capita and percent distribution by function--student aid, general institutional support, and "other"--and by sector. The "other" category includes higher education appropriations that are neither for student aid nor for direct institutional support--payments for central state services for libraries and computing, central administrative expenses, state boards and commissions, fringe benefits and retirement payments to postsecondary personnel, support for postsecondary vocational education not encompassed in the HEGIS reporting universe, and payments to other states for education services. Dollar values in this table are likely to be less informative than the mix of support and the percent distribution. If the index values are used, a state's higher education budget profile can be compared with national averages, and any exceptional deviation can be reviewed for consistency with state policy.

State and Local Governments Direct General Expenditures by Function. The pie chart and the associated table indicate the percentage distribution of the state and local government budget [1] for seven categories of public services (higher education, elementary/secondary education, highways, public welfare, health and hospitals, public services, and "other"). The table also provides the same information for 1980, as well as the total dollars per capita. Index numbers (U.S. average=100) are in bold print.

The financial support given any public service depends on many factors: public demand, unit costs, government capacity to finance, and competing claims. Certain universal needs, such as elementary and secondary education and health care, typically are given a high priority by states and communities, and their per capita funding varies less than other public services such as welfare and higher education.

State support of colleges and universities depends a great deal on a state's philosophy about what constitutes adequate provision of "educational opportunity," who should pay (based on the interpretation of who benefits), and what the standards for geographical and program access should be. State history, citizen expectations and attitudes, urbanization, climate, and educational opportunities in nearby states are some factors that influence decisions in these areas. A few states have decided not to be in the higher education "business" as much as others. They intentionally plan to be "debtor" states and encourage residents through extensive student aid programs to attend out-of-state schools.

Tax Capacity and Effort. The chart at the lower right of the page presents data on tax capacity and tax effort for ten tax categories. Collected revenues and overutilized or underutilized potential are reported for each tax category, together with related rankings and national averages. The relative importance of the various tax bases as potential revenue sources is indicated by the percent distribution of capacity.

- *State and local tax capacity* measures the potential of state and local governments to obtain revenues for public purposes through various kinds of taxes. Earnings of local residents are only one source of tax revenues; therefore, this tax capacity measurement is *not* equivalent to per capita personal income. Tax capacity is measured here by the "representative tax system," [2] which defines the tax capacity of a state and its local governments as the amount of revenue they would raise if a national, uniform set of tax rates were applied. The sum of the capacities for all states equals the total tax revenues collected in the United States. The tax bases represent, for each of the various kinds of state and local taxes, the degree to which taxable activity exists within the jurisdiction. The tax rates applied are based on the average amount of taxes collected nationwide expressed as percentages of the total U.S. tax-base activities. For example, if 5 percent of total general sales is collected in taxes nationally, then 5 percent is the rate applied to the level of general sales in each state. Thus, the tax (or capacity) in a state is the level of economic activity being taxed, multiplied by a common tax rate.

  Ten tax categories are included in this report. They are: general sales, selective sales and gross receipts, licenses, individual income, corporate net income, three categories of property tax (residential, commercial and industrial, and farm), death and gift taxes, and severance.

- *Tax effort* measures, in percentage terms, the extent to which states tax their available resources. The total tax capacity nationwide is equal to the tax revenues collected by all states. Since the nationwide effort by definition is 100 percent, the index of tax effort for individual states indicates how each state compares with the national average.

Education financiers and elected officials charged with providing government services and establishing taxation policies have a responsibility to understand tax capacity and tax effort. When the adequacy of higher education or any government support service is challenged, questions will arise, such as, How does our state compare with its neighbors in its ability to raise money through taxes? Do we realize as much revenue from our tax sources as states with similar capacity and economic structure? These initial inquiries generally lead to consideration of changes in specific tax rates or to decisions to encourage growth in certain tax bases. The chart of tax capacity and effort presents data for answering these questions.

---

[1] The state and local government total budget per capita (pie diagram) is substantially larger than the amount of taxes collected per capita (lower-right table) because the budget includes nontax revenues and exceptional types of tax revenues not reported as part of the "representative tax system," and because the budget has a different reporting date (1984 versus 1983). The state budget for higher education per capita is larger than total appropriations for higher education (upper-left table) because the budget includes (and appropriations exclude) funding of auxiliary enterprises, capital investment, federal revenue-sharing funds, independent operations, and revenue for centrally funded offices, faculty fringe benefits, and student aid when they are not part of an institutional account.

[2] The "representative tax system" approach to capacity measurement was initially developed by the Advisory Commission on Intergovernmental Relations (Mushkin and Rivlin) and simplified for yearly computation by Robert Reischauer and later by Kent Halstead. See Halstead, *Tax Wealth in Fifty States*, U.S. Government Printing Office, Washington, D.C., 1978, 255 pp., stock no. #017-080-01871-3. The most recent update of this work is *1983 Tax Capacity of the States*, Advisory Commission on Intergovernmental Relations, Washington, D.C., April 1986.

Demographics. The brief summary in the lower left-hand corner of the page lists the population of the state and its ranking relative to other states, the number of high school graduates in the state and the rank, the FTE enrollment in higher education and its state rank, and the enrollment distribution between the public and private sectors.

Public Institutions: Status Report; Independent Institutions: Status Report

The format of the "Status Reports" for the public and independent sectors (which are found on the second and third data pages of each state report) are basically the same. Only the categories of revenues differ. (For the independent sector, private gifts and endowment income are shown separately; for the public sector these revenue categories are combined.) Each report contains four parts: the principal entries for "Institutional Revenues" and "Institutional Expenditures" and the supporting entries for "State and Local Finances Per Capita," and a profile of enrollments by institutional category.

In the broadest terms, proceeding from top to bottom, the status reports show how state and local government appropriations, allocated by type of institution, interact with related enrollments per capita and result in appropriations per student, which, together with other institutional revenues, support institutional expenditures.

State and Local Finances. The end result of the upper part of the arrow on these pages shows appropriations per capita for the public and independent sectors. This amount is derived using the following computation: state and local tax revenues are multiplied by the percentage of taxes allocated to higher education, to equal the dollar amount appropriated to higher education. (The computation to this point is the same as described in the arrow on the first data page.) This allocation in the "State and Local Government Support of Higher Education" table is then multiplied by the proportion of the revenues allocated to public/independent institutions, to equal the state and local appropriations per capita to the institutions.

To analyze the adequacy of this financial support, the reader must assess the data on institutional revenues and expenditures located in the tables at the bottom of these data pages. For example, deficiencies noted in per-student appropriations may be traced back to a below-average allocation of state and local government tax revenues.

Institutional Categories and Enrollment Profile. To the right of each arrow on data pages 2 and 3, FTE enrollments per 1,000 population are shown (with their index values) by institutional category. The percentage share of total enrollments for any one of the 10 institutional categories can be computed by dividing a category's FTE enrollment by the total FTE enrollment for the sector.

The institutional categories reported are, in the judgment of the authors, the minimum number required to establish reasonable comparability at the state level and are used throughout the document. They are: *research universities*, which grant doctorates and are among the top 75 institutions in the country ranked on budget research expenditures (there are two institutions that are exceptions but are included in the research university category because of their graduate and research emphasis: Rockefeller University and Georgia Institute of Technology; thus 77 institutions are used in this study); *universities*, which grant substantial numbers of doctorates but are not as significantly involved in research activities as the research universities (both types of universities are then subclassified as either with or without medical, indicating the presence of medical, dental, osteopathic, or veterinary medicine programs); *comprehensive* institutions, which grant graduate degrees, primarily at the master's level; *general baccalaureate* institutions, which award most degrees at the bachelor's level; *two-year academic and comprehensive* colleges, which emphasize associate and certificate degrees; *two-year occupational* colleges, which grant associate and certificate degrees primarily in occupational fields; *health professional* colleges, which grant degrees in a variety of medical areas including first-professional degrees; *other professional and specialized* institutions, which include professional health programs that do not confer first-professional medical degrees, engineering schools, teachers colleges, law schools, rabbinical schools, and seminaries. The categories are defined in detail in appendix A.

The characteristics that distinguish the various types of institutions have an important influence on financing. Each institutional category has a relatively distinct mission, instructional program, and student level. Each institutional category thus differs in faculty requirements, faculty salary rates and work loads, class size, necessary supporting equipment, student personnel services, administrative overhead, plant size, and other operating conditions that affect costs. In states where large proportions of students attend universities, with their inherently costly complex of programs and degree levels, support requirements are high. In states where enrollment emphasis is on two-year colleges, which are far less expensive to operate, support requirements for the total public system will be substantially less. Because differences in enrollment patterns among different institutional categories greatly affect total funding requirements, it is important that states understand how their structures differ from those of other states and how these structures affect funding. This knowledge will encourage development of an overall plan for financing based on an independent determination of support needs for each type of institution within the system.

Institutional Revenues and Expenditures. The tables at the bottom of data pages 2 and 3 are divided into two parts--institutional revenues and institutional expenditures. Since institutional revenues and expenditures per user unit (principally students) represent the financial bottom line, this analysis is presented by institutional type.

The indexes for revenues and expenditures are computed using U.S. averages for each of the institutional categories. Thus, the revenues and expenditures for a given type of institution in one state can be compared with values for the same type of institution in other states and with the national average. Since enrollment is the basic load for instructional and related supporting activities, most revenues and expenditures are reported on a per-student basis. Government contracts and grants (mostly sponsored research) are reported per faculty member; public-service expenditures are reported per 1,000 population. The lower part of the tables presents a percent distribution of revenues and expenditures, including indexes relative to the U.S. average.

Institutional Revenues. The revenues presented are for current operations relating to the institution's educational mission and immediate supporting activities. These educational and general (E&G) revenues exclude income from sales and service of auxiliary enterprises, hospitals, independent operations, and revenues for physical plant construction.

The following are brief definitions of each revenue category; more detailed information can be found in appendix B.

- *State and local government appropriations* include the amounts provided to institutions by state and local government legislative bodies for current operations, excluding grants and contracts.
- *Tuition Revenues* report the revenues obtained from tuition and fee charges assessed students for current operating purposes, including those amounts remitted to the state to offset its appropriation. When a large proportion of out-of-state students is enrolled, nonresident tuition payments increase the average tuition per student to an amount substantially above the resident rate.
- *Private gifts, grants, and endowment income* include revenues from donors for which no legal consideration is involved, and income received from endowment and similar funds (and expended for current operating purposes).
- *Other E&G (excluding government contracts)* includes: federal government appropriations (mostly to land-grant institutions); revenue from sales and services of educational activities, such as film rentals, scientific and literary publications, testing services, university presses, and dairy products; and revenues from sources not covered elsewhere.
- *Total E&G (excluding government contracts)* is an intermediate revenues total that provides a measure of general operating funds excluding government grants and contracts (that is, research and training funds). This is a key measure to compare in assessing the adequacy of operating funds for each institutional category. Consideration should be given, however, to the relative extent of graduate education provided and average institutional size, since these conditions affect funding needs and are not accounted for here.
- *Government grants and contracts* are revenues (both direct and indirect) from government agencies for specific research projects and training programs.
- *Total E&G revenues* are the total of all E&G revenues, including sponsored research. This total cannot be related to a single user unit and is therefore reported only in absolute dollar amounts.

For any given institutional category, the dollar amounts for each type of revenue should be checked against national averages and levels in other states. A large contribution from a single source may compensate for low funding from other sources and help to achieve a nearly average level of total revenues. Such an imbalance would be seen in the percent distribution figures, which would show a skewed deviation from national averages. The percent distribution chart at the bottom of the page can be used to gauge the importance of each individual revenue source. The type of institution strongly affects the role of each source and the pattern of support.

In the public sector, state and local government appropriations and student tuition are two income sources that, in particular, should be carefully scrutinized in terms of both adequacy of dollar amount and relative share of total revenues. In some states, appropriations and tuition levels are quite inconsistent with national averages and should be reviewed with state objectives for support and equity in mind.

Institutional Expenditures. These expenditures reflect E&G current funds expenditures and mandatory transfers for the operations of the institutions. Again, as with revenues, expenditures for auxiliary enterprises, hospitals, and independent operations are excluded. The E&G expenditure components, briefly stated (they are more fully defined in appendix B), are as follows:

- *Instruction* expenditures of the colleges, departments, and other teaching units for all types of instruction as well as expenditures not separately budgeted for departmental research and public service are included in this category.
- *Academic Support* expenditures are for libraries, academic administration and personnel development, computing service, and other services that are an integral part of the institution's primary mission of instruction, research, and public service.
- *Research* includes funds expended for activities specifically organized to produce research outcomes, commissioned by an external agency or separately budgeted by the institution. Research expenditures are reported per faculty member.
- *Public Service* includes funds budgeted specifically for public service and expended for activities established primarily to provide noninstructional services to groups external to the institution. Public-service expenditures are reported per 1,000 individuals in the state's population.
- *Other E&G Expenditures* are for student services (admissions, career guidance and counseling, health), institutional support (general administrative services, planning, legal, and fiscal operations), plant operation and maintenance, student scholarships and fellowships, and mandatory transfers for auxiliary enterprises.
- *Total E&G Expenditures* is an aggregate dollar amount that indicates the relative importance of total funding for each institutional category as part of the overall sector budget.

The national average dollar amounts per student for the various types of institutional expenditures can be viewed as typical "costs" of education. Deviations from the national norm result from a whole set of institutional conditions that differ from the hypothetical "average" circumstances. Although differences in the variables affecting expenditures within institutional categories have been partially restrained by features common to the group, many individual institutional differences remain. Also, certain external factors (for example, an unexpected depletion or windfall in financial support or a substantial difference between projected and actual enrollments) occasionally occur that cause expenditures to deviate significantly from category norms.

Significant differences in the mix of expenditures from national averages should be studied for consistency with goals and objectives. Often, expenditure patterns are based on historical precedent and unadjusted trends, resulting in a profile that is inconsistent with the institution's current situation and mission. The percent-distribution table and the degree of variance from national averages can assist in an initial examination of this possibility.

Trends

The primary focus of the fourth and fifth data pages is trend data on enrollments, state and local appropriations, tuition and fees, and total E&G revenues (excluding grants and contracts). Changes in yearly growth for enrollments and state and local appropriations in current dollars are presented, as well as inflation-adjusted changes for state and local appropriations, tuition and fees, and total E&G revenues. The trend analysis has three additional components: enrollment mix, tuition revenues and instruction expenditures, and the mix of support provided from the various sources.

State and Local Appropriations and Enrollments. The table at the top of this first trend page provides FY84 state and local appropriation data and Fall 1983 FTE enrollment data by institutional category. The four-year percentage change from 1980 to 1984 is presented for state and local appropriations and enrollments. Yearly percent changes for 1983 to 1984, 1982 to 1983, and 1981 to 1982 are also shown.

Constant-Dollar Revenues. The consequences of inflation on appropriations, tuition and fees, and total E&G revenues (excluding grants and contracts) are shown in the table on the second trend page. This table shows the four-year and yearly percentage changes in constant dollars per student for each of the three variables.

Since all absolute-dollar amounts have increased in recent years to meet the requirements of expanding enrollments and to offset inflation, the effects of these two factors must be excluded if a trend on the real adequacy of financing is to be established. Thus, dollar amounts are reported on a per-student basis, and constant dollars of equivalent purchasing power are obtained by dividing actual dollars by the Higher Education Price Index (HEPI). The HEPI measures average changes in the prices of goods and services purchased by colleges and universities through current-fund E&G expenditures (excluding expenditures for sponsored research and auxiliary enterprises). According to HEPI, the prices colleges and universities paid for goods and services show a 36.6 percent rate of inflation between 1980 and 1984.[3]

State and Local Appropriations. The diagram at the top of the first trend page depicts the data from the tables on the two trend pages. The solid line represents the percentage change in state and local appropriations (in actual dollars) to public institutions between 1980 and 1984. The dashed line plots the percentage change in public FTE enrollments between fall 1979 and 1983, the relevant academic period. The dotted line represents the measure of constant dollars per student, derived by dividing state and local appropriations adjusted for inflation (using HEPI) by FTE enrollments for 1980 through 1984. (1980 is the base year.)

Public Enrollment Mix and Independent Enrollment Mix. The distribution of FTE enrollments in 1984 by institutional type for the public and independent sectors is shown in the pie chart on the first trend page at the bottom of the left-hand side. The distribution of enrollments in 1980 is shown in parentheses.

A Comparison of Tuition Revenues and Instruction Expenditures. In the lower portion of the first trend page are two bar graphs comparing tuition revenues and instruction expenditures for FY80 and FY84 in constant dollars per student. The top graph portrays the public sector, and the bottom graph shows the independent sector. These graphs show data for tuition revenues and instruction expenditures from the second and third data pages and are presented for seven categories of institutions. (The research universities and universities combine data for medical and nonmedical institutions, and data for the health-professional schools are not displayed.) The solid white column shows the dollars per student for instructional expenditures and the crosshatched column shows the tuition-revenue dollars per student. The percentages at the bottom of each box show the proportion of instruction expenditures that tuition represents in FY80 and FY84.

Although no single indicator can explain and justify decisions regarding tuition levels, reference to instructional costs appears to be a most direct consideration.

Tuition primarily pays for instruction and related overhead costs of administration, library, and plant operation and maintenance. In the public sector, tuition revenues seldom equal these costs, with the share varying from state to state by institutional type. In the independent sector, tuition revenues almost always cover the majority of these costs. Decisions in setting the level of tuition are based on costs, family ability to pay, student demand as affected by price competition from other institutions, and state philosophy regarding the citizen's "right" to postsecondary educational opportunities. Public two-year colleges, viewed as a democratic open door to continued education, traditionally have charged the least tuition. Private universities with strict entrance requirements, a nationally drawn student body, and high dependence on student tuition as a source of income traditionally have charged the most.

Trends in the Mix of Support for Higher Education. The bar graphs at the bottom of the second trend page show individually for the public and independent sectors the mix of support for the following sources: state and local appropriations, tuition revenues, government grants and contracts, private gifts, grants, and endowment income, and "other" E&G revenues. (The bar graphs portray the percentage distribution of revenues from the second and third data pages for FY84.) The solid white column represents FY80 and the crosshatched column is for FY84.

There is a great deal of inertia in the funding pattern in both sectors. Gradual shifts over time should be thoroughly investigated, particularly in times of financial stress when every source of funding requires maximum encouragement and any decline in relative contribution could threaten institutional solvency if allowed to continue.

Faculty Salaries

The major purpose of the sixth data page is to present average salaries for 9- to 10-month full-time faculty by academic rank and institutional category in the the three-year and two-year percentage changes in salaries (1980 to 1983 and 1981 to 1983, respectively). The faculty data for academic year 1983-84 normally would have been used, but they were not academic year 1982-83, and to report available. The bold print index values (U.S. average=100) report relative positions compared to the U.S. average for the average salaries and four-year change. In addition, the count of 9- to 10-month full-time faculty by academic rank and institutional category are provided.

---

[3] "Higher Education Prices and Price Indexes: 1984 Update," (Washington, D.C.: Research Associates of Washington, September 1984).

To remain alert to new requirements and allow time for adequate financial planning, colleges and universities must consistently monitor national trends in salary data. Faculty services are the single largest purchase of colleges and universities, accounting for nearly half of their current operating expenditures. They should check three specific areas: the institution's relative position within its peer or competing group, consistency in remuneration by rank within the institution, and maintenance of faculty purchasing power.

Institutional Descriptors and Data Notes

The seventh data page has two purposes: (1) to present descriptive data about the institutions in the state and (2) to provide information about special circumstances in the state that affect the interpretation of the HEGIS data, as well as to provide any other necessary clarifications.

Institutional Descriptors. The data presented here include the number of state institutions in each category, their mean size, their total FTE enrollment, and the percent distribution of enrollment by student level. The bold print index numbers (U.S. average=100) indicate the relationship to the national average.

Enrollment profiles of state institutions in each category should be checked against national averages to determine group compatibility. A large variance from the national average of a particular category suggests an inconsistency with the common characteristics of that category and should be noted in any analyses; it implies that the data are substantially less comparable. The mix of enrollment by student level, in particular, has a significant impact on institutional expenditures. Education programs are usually more expensive to operate at upper levels because of progressively smaller classes, more extensive employment of higher-ranking faculty, and in some instances, the need for more costly equipment. State institutions that have enrollment patterns skewed toward upper division and graduate levels relative to national averages are therefore likely to need proportionately greater revenues and expenditures.

Data Notes. The data notes consist of three elements: (1) a summary of funds that *do not flow through institutional accounts* for student aid, postsecondary vocational-technical education, state boards and commissions, fringe benefits, interstate contracts and reciprocity payments, centrally provided service functions (library service, computers, phones), and centrally administered capital/debt service; (2) a clarification of institutional financial reporting for debt service and current funds, and the policy on tuition and fees reappropriations; and (3) comments on special circumstances affecting data comparability or any other necessary clarifications for interpretation of the data. These notes are provided to assist the reader in making interpretative adjustments between and among states, given differences in state practices.

CHAPTER 3: STATE BY STATE REPORTS

Comparisons of funding patterns for all 50 states, the District of Columbia, and the U.S. average are described in this chapter. The state profiles, treated in alphabetical order, are the central focus of this study. The state profiles follow the summary of general patterns and trends for the nation.

U.S. AVERAGE

Recent Trends

Between 1980 and 1984, state and local funding for public higher education grew in absolute terms by 34.6 percent. But after adjustments for inflation and for a 7.3 percent increase in public enrollments, this growth in funding was reversed and meant instead a reduction of 8.2 percent in constant dollars per student. The pattern of revenue changes by sector was fairly uniform, with seven of the ten sectors experiencing real-dollar erosion in state appropriations per student. The specialized institutions, including the health-professional and other specialized schools, had respective gains in funding of 7.6 and 8.2 percent. All other sectors had losses ranging from .2 to 12.1 percent. The two-year academic schools experienced the most serious losses, of 12.1 percent. Large losses were also evident for the comprehensive and general baccalaureate institutions of 10.6 and 10.1 percent, respectively.

In a somewhat counterbalancing pattern, tuition revenues improved in value between 1980 and 1984, by 14.4 percent. However, improvements in tuition were outweighed by losses in state appropriations, netting an overall drop (2.9 percent) in the constant-dollar value of revenues per student in the public sector.

Financial conditions in the private sector were more positive and showed an increase in the constant-dollar values of revenues, amounting to 11.3 percent per student. This included a 3.8 percent gain in FY84. All categories of private institutions shared in these improvements except the two-year occupational sector. That sector found its funding reduced by 14.0 percent.

State Financing of Higher Education

In 1984, state and local government support for higher education averaged $113 per capita. Ninety-three percent of these funds were allocated to institutions in the form of general institutional support, and 6 percent went for state student aid. Ninety-five percent of state funds for higher education went to the public sector, and 3 percent went to the independent sector. The remaining 2 percent was not identified by sector.

State Tax Base and Budget

In 1983, the states and localities collectively raised $1,176 per capita in tax revenues. The largest single source of tax revenues in the states was general sales, which provided 23.5 percent of tax revenues. The next largest source was individual state income taxes, which accounted for 20.0 percent of tax funds. Residential property taxes yielded 19.5 percent of state tax revenues, followed by selective sales and gross receipts at 11.7 percent, and commercial and industrial property taxes at 8.5 percent. These five tax categories provided 83 percent of state and local tax revenues. U.S. Census Bureau data on the distribution of these funds indicate that in 1984 elementary/secondary education received the largest single share at 25.6 percent. This was followed by public welfare at 12.9 percent, public services at 11.4 percent, higher education at 9.5 percent, health and hospitals at 9.3 percent, and highways at 7.9 percent. The remaining funds (23.4 percent) were used for a variety of other state functions. A comparison of 1984 state spending patterns with those of 1980 indicates that higher education, public welfare, health and hospitals, and other miscellaneous services received increased shares of state budgets, whereas elementary/secondary education and highways received less. Shares allocated to both higher education and public services were unchanged during this period.

Higher Education Enrollments

Three-quarters (78 percent) of the 8.8 million FTE students in this country attended public institutions of higher education in fall 1983. Thirty-eight percent of all students attended two-year institutions, 30 percent attended universities, 26 percent attended comprehensive master's-granting institutions, and 4 percent attended baccalaureate colleges. The remaining students enrolled at specialized institutions. There were moderate gains in public higher education enrollments between 1980 and 1984, with enrollments growing by 7.3 percent.

Institutional Finances and Characteristics

Public and independent institutions finance their activities in very different ways. At public institutions in 1984, state and local appropriations constituted the major share of funds, providing 54 percent of all educational and general revenues. The importance of state and local funds at public institutions fell slightly between 1982 and 1984, from 59 percent to 54 percent of all E&G funds. By contrast, independent institutions received only 2 percent of their funds from state and local sources. Private institutions instead relied primarily on tuition for their funds, receiving 50 percent of their total revenues from this source. These institutions received 12 percent of their revenues from private gifts and grants and 8 percent from endowment income. Public institutions received only 23 percent of their funds from those sources (18 percent from tuition and 5 percent from private gifts and endowments). Government grants and contracts were roughly similar in importance at public and private institutions, representing 12 percent and 16 percent of respective E&G revenues. For public institutions, tuition is carrying an increasing share of costs in order to compensate for diminishing state appropriations and government grants and contract funding.

Public institutions spent a greater share of their funds on instruction and public service than did private institutions--45 percent and 5 percent versus 38 percent and 3 percent. Independent institutions spent larger shares on institutional support activities than the publics (42 percent versus 32 percent), while the shares going to research and academic support were similar for both types of institutions.

Between 1980 and 1984, public institutions showed real-dollar erosion of 2.9 percent in E&G revenues per student, while independent institutions experienced a real gain of 11.3 percent. For public institutions, this drop was due largely to reductions in state funding (amounting to 8.2 percent per student). For the independent sector, net gains in tuition of 13.4 percent were responsible for moving total revenues ahead, even in the face of a 4.5 percent gain in enrollment. Public sector enrollments grew more rapidly, at 7.3 percent.

On average, public institutions were nearly three times larger than private institutions and placed greater emphasis on lower division studies. Private institutions enrolled 1,583 students on average (compared to 4,677 for public institutions) and focused more on the graduate level (19 percent of private students studied at the graduate level versus 8 percent of public students).

Faculty generally were better paid at public institutions, although there were important variations by both sector and rank. From 1979 to 1983, faculty salaries grew 36 percent in the public sector and 39 percent in the private. The Consumer Price Index, however, increased by 43.3 percent in this same time period, causing the general purchasing power of faculty salaries to fall.

ALABAMA

Recent Trends

Alabama found its public support to higher education increasing more slowly than the national average between 1980 and 1984. Appropriations to the public sector increased by 30.5 percent, a rate 12 percent below average. During this same period, enrollments grew by 7.9 percent, leaving an 11.5 percent net constant-dollar decline in state and local appropriations for Alabama's public institutions. Alabama reflected the national pattern of loss in spending power from state sources, but the losses in Alabama were more severe. On average, U.S. public institutions saw the value of their state funding drop by 8.2 percent. All institutional sectors in Alabama except the nonmedical university and the general baccalaureate schools experienced a loss in overall funding in constant dollars, ranging from .4 to 14.4 percent.

Fueled by real-dollar gains in tuition revenues, the independent sector in Alabama gained 5.5 percent in its total E&G revenues, even after adjustment for inflation and enrollment growth. Although the loss for the two-year occupational sector was substantial, 54.4 percent, other private sectors gained as much as 15.4 percent.

State Financing of Higher Education

Alabama operated a large public higher education system in 1984, enrolling 31.3 FTE students per 1,000 population, compared to the national average of 29.1 percent per 1,000 population. State appropriations of $3,359 were 9 percent below the national average. Revenues from other sources failed to improve total funding relative to national averages.

State Tax Base and Budget

Alabama's economic capacity to collect tax revenues was among the lowest of the states, at $880 per capita, indexed at 75. Only Mississippi had a smaller base of financial activity to tap. All of the major types of tax categories (sales, income, and property) exhibit substantially below-average capacity. Compounding this problem, Alabama makes a very modest tax effort (13 percent below average), resulting in tax revenues of $762 per capita (a level 35 percent below the national average) and the third-smallest pool of public funds of any state. Alabama relied heavily on sales taxes for revenues and made very little use of property taxes. In 1983, Alabama could have collected an additional $622 million in property tax revenues, had property in the state been taxed at the rate of the national average. Census data (which include both tax revenues and federal revenue-sharing funds) indicated that 12.9 percent of the state's budget was spent on higher education in 1984, a level substantially above the U.S. level of 9.5 percent. (From 1980 to 1984, higher education in Alabama saw its share of the state's budget increase, from 12.0 percent to 12.9 percent.) Health and hospitals (15.1 percent) and highways (9.9 percent) were also comparatively well funded in Alabama--at the expense of public welfare, public services, and general state functions, each of which received 14 to 34 percent less than the national average. The share of state and local funds allocated to elementary/secondary education fell somewhat, from 26.7 percent of the budget in 1980 to 24.7 percent in 1984. In sum, higher education has to be considered a state priority because it receives such a relatively large share of the exceptionally low tax revenues generated.

Higher Education Enrollments

In general, Alabama's public students are more likely to attend universities and comprehensive institutions than two-year schools, which creates a relatively more expensive system to operate. By contrast, students enrolling in Alabama's independent sector were concentrated in general baccalaureate schools and comprehensive institutions in 1984.

Institutional Finances and Characteristics

Alabama supported 37 public institutions of higher education in 1984: 3 universities, 11 comprehensive, 2 baccalaureate, and 21 two-year institutions. Funding for the medical research universities and nonmedical universities (both from the state and in total) approximated the national average. By contrast, the comprehensive institutions showed below-average funding both from the state and in total. The baccalaureate and two-year schools also functioned with funds 14 to 29 percent below typical levels, largely because of below-average state support and lower tuition.

Faculty salaries in Alabama continued to lag behind national averages in 1983. For the public sector as a whole, they trailed by 15 percent, with some institutional sectors behind by as much as 20 percent. Only the general baccalaureates had above-average salaries at the upper ranks. Salary increases between 1979 and 1983 were also below average by 18 percent.

Additional State and Local Government Funding for Higher Education Current Operations

The amounts shown below are included in the "State and Local Government Support of Higher Education" section on the first data page for your state. (The dollar amounts shown on the first data page are shown in per capita terms.)

Student Aid	$
Postsecondary vocational-technical education	$
State boards and commissions	$
Centralized retirement or fringe benefits	$
Interstate contracts and reciprocity payments	$
Service functions provided centrally (e.g., computer service, library, telephone, etc.)	$
Other	$

Clarification of Institutional Financial Reporting

These funds are noted here to clarify differences in practices among the states that affect the comparability of these data.

Capital Outlays	$
Debt Service	$
Sources:	
- state appropriations centrally allocated	$
- state and local appropriations to institutions	$
- tuition and fees	$
- auxiliary enterprises	$
- other	$

ALASKA

Recent Trends

State and local appropriations to higher education rose 64.1 percent in Alaska between 1980 and 1984, which was 85 percent better than the U.S. average. Yet this increase in state funding was not sufficient to accommodate nearly 60 percent more students and inflation. Enrollment growth, over seven times the national average, ranked Alaska 1st in the nation in this regard. Thus Alaska's public institutions faced a 23.2 percent decline in real-dollar state support per student. Only South Dakota exceeded this loss. When other revenue sources are considered, the total operating base of public institutions in Alaska declined by nearly 20 percent on a per-student basis. Again, only South Dakota exceeded this loss. Fiscal year 1983 is the only year of this study in which Alaska made total funding gains. In FY82 the loss was 11.6 percent per student and in FY84 the loss was 6.0 percent per student.

State Financing of Higher Education

Still, in 1984 Alaska spent $341 per capita for higher education, a level more than three times the national average. Ninety-seven percent of this support is funneled directly to public institutions in the form of appropriations, and most of the remainder is provided for student aid.

State Tax Base and Budget

Alaska raised over four times more tax revenues than the typical state in 1983 because of inherent wealth and a strong tax effort. Alaska has a tax capacity almost three times greater than most states. This is evident in many tax categories, especially severance taxes (index 4,736), individual and corporate incomes (indexes 202 and 125 respectively), residential and industrial properties (indexes 132 and 205), and licenses (index 130). The state made the most use of its capacity in the area of severance taxes (ranked 3rd), obtaining an astounding 74 percent of its revenues from this source alone. According to the Census Bureau, Alaska spent a total of $8,729 per capita in state funds in 1984, four times the national level. Alaska's spending priorities were most evident for hgihways, public services, and other miscellaneous categories. By contrast, public welfare and health and hospitals received very small shares of the state budget, shares that were 59 to 64 percent below average. Elementary/secondary education also received a below-average share, smaller by 22 percent. Only 6.6 percent of state funds were allotted to higher education, a rate 31 percent below average. Still, because of the size of the state's tax base, higher education received funding (in dollars per capita) that was more than three times the national level.

Higher Education Enrollments

The state's public institutions enrolled 3 percent fewer students than was typical in 1984. The majority of students in the state enrolled in either the two comprehensive institutions or the nine two-year institutions. In absolute terms, the actual number of students in public institutions was very small: 13,317 FTE in total.

Institutional Finances and Characteristics

Although price differences cloud the interpretation of financial data in Alaska, public institutions in the state operated with revenues that were generally three to four times national levels. At the comprehensive and general baccalaureate institutions particularly, funding was close to four times national rates, averaging $18,096 and $16,566 per student, respectively. In addition, Alaska received an exceptional number of government research grants, a further contribution to the state's funding base.

Institutions in Alaska are exceptionally small, usually enrolling only 1,100 plus students, one-quarter the norm. Faculty salary levels in Alaska's public sector in 1983 were over 50 percent above the national average.

Data Notes

1983-84

Additional State and Local Government Funding for Higher Education
Current Operations

The amounts shown below are included in the "State and Local Government Support of Higher Education" section on the first data page for your state. (The dollar amounts shown on the first data page are shown in per capita terms.)

Student Aid	$ 1,861,397
Postsecondary vocational-technical education	$
State boards and commissions	$ 2,823,200
Centralized retirement or fringe benefits	$
Interstate contracts and reciprocity payments	$ 1,592,500
Service functions provided centrally (e.g., computer service, library, telephone, etc.)	$
Other	$

Clarification of Institutional Financial Reporting

These funds are noted here to clarify differences in practices among the states that affect the comparability of these data.

Capital Outlays	$
Debt Service	$

ARIZONA

Recent Trends

The 13.4 percent increase in state appropriations to Arizona's public institutions in 1984 was more than sufficient to cover both enrollment increases and inflation. Arizona's public institutions had real-dollar gains in total funding per student of 5.3 percent in 1984, based on a 6.0 percent gain in constant-dollar state funding and 4.6 percent gain in inflation-adjusted tuition revenues. When seen against a national backdrop, these improvements in funding in Arizona are especially impressive. Nationally, public institutions saw their purchasing power increase by 2.6 percent.

From 1980 to 1984, state and local appropriations held constant with both inflation and enrollment growth in Arizona. The 44.8 percent increase in state funding created a .1 percent real-dollar loss in finances, due to a 6.1 percent increase in enrollments and a 36.6 percent inflation rate. Constant-dollar tuition revenues increased, however, by 11.1 percent per student, and Arizona institutions experienced a 1.7 percent constant-dollar increase in their total E&G revenues per student. Almost every category of public institution in Arizona experienced gains, ranging from 8.1 to 26.2 percent. The exceptions were the medical research university with a .8 percent decrease in total funding and the two-year academic colleges with a decrease of 4.5 percent. In contrast, during the same four-year period, constant-dollar total E&G revenues declined 20.7 percent in the independent sector.

State Financing of Higher Education

Arizona spent $113 per capita for higher education in 1984, an average level of support. These funds were spent entirely in the public sector, primarily in the form of direct institutional appropriations. The state student-aid program is small in Arizona.

State Tax Base and Budget

Arizona ranked 25th nationally in tax capacity in 1983, but tax effort was 9 percent below average. As a result, Arizona collected taxes of $1,041 per capita in 1983, 11 percent below the national average. In 1981, Arizona's tax effort was 6 percent above the U.S. average, ranking 13th nationally.

In Arizona's budget, higher education, public services, and highways received above-average shares of the state pie. Higher education in particular is favored, receiving 13.6 percent of the state's budget, a level 43 percent above the national average. By contrast, public welfare and health and hospitals received shares of the state budget that were very low by national standards.

Higher Education Enrollments

Far more students enroll in research and doctoral institutions in Arizona than is typical. Forty-six percent of the state's public students enrolled in universities in fall 1983, in contrast to the national average of 30 percent. Similarly, Arizona places more emphasis on two-year institutions, and 46 percent of the state's students enrolled in this sector, in contrast to the U.S. average of 38 percent.

Institutional Finances and Characteristics

In 1984, despite recent improvements in funding, per-student revenues overall in Arizona were below the comparable levels received by similar public institutions, largely because of below-average state funding. There were, however, major variations in this general profile by type of institution. The research university, the University of Arizona, received almost average funding from the state (index 96) but, overall, operated with revenues 16 percent less than average because of lower tuition revenues. The large academic two-year institutions received state funding per student 13 percent below average, and overall, funding was 10 percent below average. The nonmedical university had a similar funding pattern. The two-year occupational institution in the state operated with funding that was 52 percent better than average. Northern Arizona University, a comprehensive institution, operated with 20 percent more funding per student than other similar institutions.

The University of Arizona (medical research university) spent less on instruction and more on academic support than is typical of such institutions. Arizona State also had a large academic support and public-service component.

Generally, institutions in this state were larger than average in 1984. The University of Arizona, with 25,797 students, is about 7 percent larger than other research universities with medical schools. Arizona State University, with 31,934 students, was more than twice as large as schools of its type. The University of Arizona is also more graduate in its focus with 22 percent of its students studying at the graduate level.

Faculty salaries in Arizona were 9 percent above national levels in 1983 and improved markedly between 1979 and 1983, particularly for the upper ranks.

Data Notes

1983-84

Additional State and Local Government Funding for Higher Education
Current Operations

The amounts shown below are included in the "State and Local Government Support of Higher Education" section on the first data page for your state. (The dollar amounts shown on the first data page are shown in per capita terms.)

Student Aid	$	775,000
Postsecondary vocational-technical education	$	5,074,300
State boards and commissions	$	
Centralized retirement or fringe benefits	$	
Interstate contracts and reciprocity payments	$	1,823,400
Service functions provided centrally (e.g., computer service, library, telephone, etc.)	$	
Centrally administered capital/debt service	$	
Other	$	

Clarification of Institutional Financial Reporting

These funds are noted here to clarify differences in practices among the states that affect the comparability of these data.

Capital Outlays	$	
Debt Service	$	
Sources:		
- state appropriations centrally allocated	$	
- state and local appropriations to institutions	$	5,000,000
- tuition and fees	$	9,453,800
- auxiliary enterprises	$	1,119,300
- other	$	

Tuition and Fees reappropriated by the state? No

ARKANSAS

Recent Trends

In fiscal year 1984, there were small improvements in the state funding base for public higher education in Arkansas. A 7.0 percent increase in appropriations translated into a 2.0 percent gain per student in constant dollars, after adjustment for enrollment shifts and inflation. Tuition revenues provided a further 7.2 percent increase. Overall, total E&G revenues (excluding government grants and contracts) per student in constant dollars showed a net gain of 3.3 percent. Funding varied from sector to sector, with four of the six public sectors showing some improvement in the purchasing power of their funds (of from .4 to 8.7 percent). The comprehensives and two-year occupational institutions experienced losses of 1.8 and 1.1 percent, respectively.

Between 1980 and 1984, higher education institutions in Arkansas experienced a net decrease in state support. The state increased appropriations for public higher education by 24.0 percent (31 percent below the national average), but because enrollment grew by 3.6 percent and inflation was 36.6 percent (HEPI), appropriations in constant dollars per student fell 12.4 percent (compared to 7.9 percent nationally). From 1980 to 1984, the state's public institutions increased tuition revenues 68 percent, resulting in an increase of 18.7 percent in constant dollars per student, 14th highest in the nation. These large increases in tuition, however, were not sufficient to offset the loss from appropriations, so that total educational and general expenditures per student in constant dollars decreased 4.1 percent.

Between 1980 and 1984, the 15 independent institutions in the state increased tuition revenues per student in constant dollars by 18.5 percent, above the national average of 13.4 percent. They were also able to increase revenues from other sources, and as a result, total educational and general expenditures per student in constant dollars increased 9.2 percent.

State Financing of Higher Education

Appropriations of $3,662 were average, ranking the state 24th. Revenues from private gifts were twice the national average. However, tuition revenues and government grants and contracts were below average. As a result, total E&G revenues were only 4 percent above average.

State Tax Base and Budget

Arkansas is a relatively tax-poor state and had a potential tax capacity of $913 per capita in 1983, 22 percent below the national average of $1,176, ranking the state 48th. (In 1981, the state ranked 43rd, with a capacity 18 percent below average.) This position was the result of low tax potential in individual income (63 percent of the national average), corporate income (77 percent), residential and commercial property (52 percent and 72 percent) and general sales (85 percent).

The tax effort of Arkansas was also low, 17 percent below the national average tax rates, with a state rank of 40th. (In 1981, the tax effort was 21 percent below average, a rank of 43rd.) Arkansas lost $257 million because of low property taxes and $78 million because of below-average general sales taxes. As a result, collected tax revenues of $755 were 36 percent below average, ranking the state last (51st) in the nation in tax funds available to support public services.

If the operating budget of the state is taken as a whole (including nontax and federal revenues), highways received the largest share of the budget relative to national averages, followed by elementary/secondary education, health and hospitals, and higher education. Public services (police, fire, sewerage, and parks) received a disproportionately low share compared to national averages.

Higher Education Enrollments

The colleges and universities of Arkansas enrolled 63,512 FTE students in fall 1983. The public sector was proportionately larger than the private sector (84 percent versus 16 percent), compared to the national average (78 percent versus 22 percent). University enrollment as a share of total public enrollment was proportionately smaller than the national average (24.6 versus 30.3 percent), four-year college enrollment much larger (57.5 versus 29.9 percent), and two-year college enrollment proportionately much smaller (15.4 versus 38.1 percent).

In 1983, Arkansas had an average number of high school graduates per 1,000 population compared to the nation.

Institutional Finances and Characteristics

The largest public enrollment (21,921) was at the state's four comprehensive colleges, which received the lowest appropriations per student compared to national averages. Thus, total educational and general revenues (excluding government contracts) at the comprehensive institutions were 20 percent below average. These institutions also had correspondingly low expenditures.

The University of Arkansas, which enrolled 13,135 students in fall 1983, received tuition revenues 22 percent below the national average for research universities without medical programs. High revenues from other sources increased total educational and general revenues to near the national average. The university emphasizes public service and research at the expense of student instruction, which was funded 35 percent below average. The university ranked last among all research universities in the nation in this respect.

The state's four baccalaureate colleges, enrolling 8,777 students, had nearly average total funding. Like the university, however, they underfunded instruction per student--by 17 percent. Research and public service were financed well above average for this type of institution.

The seven two-year academic colleges, with enrollments totaling 6,674, received above-average tuition revenues, yet funded instruction per student at 12 percent below the national average. Academic support, in contrast, was funded 10 percent above average.

The state's seven independent baccalaureate colleges, which enrolled 7,422 students, received tuition revenues that were 35 percent below average. Endowment funds made up some of the difference, nevertheless, total educational and general funding fell 23 percent below average. As a consequence, expenditures were substantially below average. For example, instruction per student was supported at 15 percent below the national average.

Reflective of these lower operating budgets, faculty salaries were below average in both the public and private sectors. Overall during the four-year period 1979-1983, however, faculty salaries in the public institutions increased slightly better than the national average.

Data Notes

1983-84

Additional State and Local Government Funding For Higher Education Current Operations

The amounts shown below are included in the "State and Local Government Support of Higher Education" section on the first data page for your state. (The dollar amounts shown on the first data page are shown in per capita terms.)

Student Aid	$
Postsecondary vocational-technical education	$
State boards and commissions	$
Centralized retirement or fringe benefits	$
Interstate contracts and reciprocity payments	$
Service functions provided centrally (e.g., computer service, library, telephone, etc.)	$
Centrally administered capital/debt service	$
Other	$

Clarification of Institutional Financial Reporting

These funds are noted here to clarify differences in practices among the states that affect the comparability of these data.

Capital Outlays	$
Debt Service	$
Sources:	
- state appropriations centrally allocated	$
- state and local appropriations to institutions	$
- tuition and fees	$
- auxiliary enterprises	$
- other	$

Tuition and Fees reappropriated by the state?

Other Comments

(Indexes shown in bold are based on U.S. average = 100)

CALIFORNIA

Recent Trends

For California's system of public higher education, fiscal year 1984 was marked by a significant drop in state funding in constant dollars per student, as state and local appropriations dropped 2.3 percent. The decline was offset by a substantial increase of 37.0 percent in tuition revenues per student, the largest increase in the nation. Thus, the purchasing power of total revenues (excluding government grants and contracts) in California's public sector increased 3.4 percent from 1983 to 1984. All categories of public institutions experienced gains except the two-year occupational colleges and the specialized institutions. From 1980 to 1984, there was a 6.6 percent loss in purchasing power per student, primarily due to a 16.7 percent per student decline in constant-dollar state appropriations. Although tuition revenues in constant dollars increased 66.5 percent per student (ranking California 1st in the nation in this regard), they were not sufficient to offset the loss in state funding.

In the independent sector, adjusted revenues per student rose by 11.4 percent between 1980 and 1984. All categories of institutions saw some improvement in the purchasing power of their funds, with increases ranging from 8.3 to 39.2 percent.

State Financing of Higher Education

California ranked in the top 10 states in the country in its funding of higher education in 1984, allocating total appropriations of $129 per capita. Ninety-seven percent of these funds were channeled directly to the public sector, and almost all were distributed through direct appropriations to public institutions. Three percent was channeled to students in the form of student aid. California provided $96.7 million for student aid in 1984.

State Tax Base and Budget

California is one of the wealthiest states in the nation and ranked 7th among the states in 1983. Its tax capacity, 19 percent above the norm, was the result of high tax potential for general sales, residential property, and individual income.

California's tax effort was 8 percent below average, with a state rank of 28th. (In 1981, California's effort was equal to the U.S. average with a state ranking of 19th.) The state lost $4.6 billion in potential revenues in property taxes, because of below-average property taxes. The state ranked 3rd in its capacity to tax property, but ranked 40th in its effort. As a result of high capacity and low effort, collected tax revenues of $1,290 per capita were 10 percent above average, ranking California 12th in the nation in tax funds available to support public services.

If the operating budget of the state is taken as a whole (including nontax and federal revenue sharing funds), public service, public welfare, and higher education received the largest share of the budget relative to national averages. Elementary/secondary education and highways received a proportionately smaller share. Higher education's share of the budget remained constant between 1980 and 1984.

Higher Education Enrollments

California educated students in its public institutions at a rate 35 percent higher than average in 1984. Although these 1984 rates of access are substantially above the national average, still they represent a major decline from 1975. At that time, FTE enrollments were 47.1 per 1,000 population in public higher education.

California is the most populous state in the nation and enrolls more students in higher education than any other state. California provides access to higher education through a tiered system of universities, state colleges, and community colleges. And, in marked contrast to national patterns, California provides its high rates of student access primarily through community colleges, which enrolled 58.1 percent of all public students in 1984. This share was much larger than the proportion (38.1 percent) typically educated in public community colleges in the United States. On the other hand, California enrolled only 14.3 percent of its students in universities, in contrast to the national average of 30.3 percent. California's 27.0 percent enrollment in comprehensive institutions was close to the national average. In summary, then, California has a very substantial commitment to higher education and, with its emphasis on a two-year college education, provides a relatively inexpensive way to achieve it.

Institutional Finances and Characteristics

California supported 132 public institutions in 1984. California's combination of heavy emphasis on two-year education and lesser emphasis on university-level education creates an educational system that on average is less expensive to operate than those in most states. The result is a system of public education that is very well supported by the state, at levels that ranged between 2 and 161 percent above average per student in 1984. The health-professional institution is the only exception: it received funds per student from the state that were 23 percent less than the national average.

Largely as a result of this substantial state funding (representing 63 percent of all E&G revenues, which are then supplemented by funding from other sources), each of California's public institutional sectors except the two-year institutions operated with total E&G revenues per student (excluding grants and contracts) that were substantially above average. California's three university sectors ranked in either first, second, or third place in terms of total E&G funding. The academic/comprehensive two-year sector was funded at levels 10 percent below average, while the occupational two-year sector functioned with 23 percent less per student than average. Tuition and fee revenues in the two-year categories (at $134 and $84 per student in the academic/comprehensive and occupational sectors) were 79 and 89 percent below average and are no doubt a significant factor in the high access rates in this segment. Tuition revenues per student were above average for all other types of institutions except at the health-professional. Above-average revenues translated into above-average expenditure patterns in most cases; public-service activities and other E&G expenditures were the exception.

Faculty salaries in the public sector were 17 percent above average in 1984. These pay rates reflect the above-average salary increases in California between 1979 and 1983. Notably, faculty pay rates in the community colleges are seemingly unaffected by the below-average operating budgets in that sector. In fact, the occupational schools, with a per-student operating budget of 23 percent below average, had salary rates that were 36 percent above average.

COLORADO

Recent Trends

State appropriations to public higher education in Colorado increased 6.0 percent in fiscal year 1984. The increase was sufficient to cover inflation and, along with a 1.0 percent decline in enrollments, made for a 1.8 percent net increase in state funding. This was the third year in a row for an increase. A small gain in constant-dollar tuition revenues per student also occurred. Overall there was a 2.3 percent improvement in the total funding base per student. There were major sector differences in funding, with five of the nine public sectors showing some improvement in the purchasing power of their funds and four others facing some retrenchment.

State and local support to public higher education in Colorado rose to $333 million in FY1984, a 54.7 percent increase from 1980. A concurrent enrollment increase of 5.9 percent was less than the national average. With inflation of 36.6 percent (HEPI), appropriations in constant dollars per student increased 7.0 percent. This compares to an 8.2 percent average loss nationally. Tuition revenues per student in constant dollars increased 10.2 percent during this period, more than offsetting inflation (nationally, tuition revenues increased 14.4 percent). As a result, total funding per student increased 5.2 percent between 1980 and 1984, eighth-highest gain in the nation.

Funding in Colorado's independent institutions was eroded by inflation and a 16.1 percent enrollment growth, eighth-largest increase in the nation. Between 1980 and 1984, total educational and general revenues per student dropped 4.9 percent, although the patterns among the different sectors varied. The general baccalaureate institutions experienced a gain of 10.6 percent. In contrast, losses ranged from 6.2 percent to 12.7 percent.

State Financing of Higher Education

The state appropriated above-average funding per capita for higher education ($115.40). Appropriations per student of $2,987 were 19 percent below the national average, ranking the state 45th. High tuition revenues (due in large part to high nonresident tuitions) substantially improved this situation, to bring total funding to a level 1 percent above the national average. However, there were substantial sector variations in funding support.

State Tax Base and Budget

Colorado is a tax-rich state and had a potential tax capacity in 1983 of $1,437 per capita, ranking it 6th in the nation and 22 percent above the national average of $1,176. (In 1981, the state ranked llth, with a capacity 13 percent above average.) This wealth is the result of relatively high tax potentials in general sales (8 percent above average), individual income (10 percent above average), and all categories of property (54 percent above average).

Tax effort in Colorado in 1983, however, was 21 percent below the national average, ranking the state 46th. (In 1981, tax effort was 16 percent below average, with a state rank of 40th.) Colorado lost $140 million by not taxing selective sales at national average rates, and lost $555 million by its low property taxes. However, the state's high level of potential tax wealth offset this lower effort, and the state collected revenues that were 3 percent below the national average. Collected tax revenues of $1,135 per capita ranked the state 20th in tax funds available to support public services.

Colorado allocated 10 percent of its tax revenues to higher education, resulting in appropriations for general institutional support, student aid, and other support of $115 per capita.

If the operating budget of the state is taken as a whole (including nontax and federal revenues), higher education and highways received the largest share (both 22 percent above average), and public welfare received the smallest share (28 percent below average). Higher education's share of the budget decreased between 1980 and 1984 from 12.8 percent to 11.6 percent.

Higher Education Enrollments

Colleges and universities in Colorado enrolled 125,607 FTE students in fall 1983. The public sector was proportionately larger than the private sector (89 percent versus 11 percent) compared to the national average (78 percent versus 22 percent). University enrollment as a share of total public enrollment was proportionately much higher (41.4 versus 30.3 percent), four-year college enrollment larger (33.2 versus 29.9 percent), and two-year college enrollment much smaller (21.7 versus 38.1 percent).

Colorado had a below-average number of high school graduates per 1,000 population in 1983 compared to the nation.

Institutional Finances and Characteristics

Appropriations per student to public higher education in Colorado were both low and unevenly distributed relative to national averages. The University of Colorado--Boulder received appropriations that were 60 percent lower than the national average for research universities without medical programs. This ranked the state last in state support for this type of institution. Appropriations for Colorado State University were 47 percent below average (ranking Colorado last among states in support of a research university with a medical program), the four baccalaureate colleges received appropriations that were 39 percent below average (ranked 35th out of 38 states), and the four comprehensive colleges received appropriations 36 percent below average (ranked 44th out of 45 states). Only the eight academic two-year colleges and health-professional institutions (University of Colorado Health Center) received above-average appropriations at 11 percent and 59 percent respectively.

All of the state's public institutions received tuition revenues well above the national average, due in large measure to high nonresident fees and enrollments. Total funding for public institutions was at the U.S. average although variations existed among the types of institutions. The two-year academic colleges and health and other-professional schools were the only types of institutions that achieved above-average total educational and general revenues per student ranging from 12 to 64 percent above average.

Instructional expenditures per student were uniformly below average, with the exception of the two-year academic colleges and professional schools. Colorado State University, for example, ranked 22nd out of 27 states in instructional expenditures per student at research universities with medical programs.

In contrast, the state's 14 independent institutions were well funded in most instances, with expenditures for instruction and academic support per student well above the national average. All sectors of the independent institutions operated with average or above-average total E&G revenues per student, with the exception of the two-year occupational colleges (28 percent below average). This was due primarily to low tuition revenues.

Faculty salaries in general at public and private institutions were close to the U.S. average. Salary increases between 1979 and 1983 for public institutions were average and at independent institutions exceeded the national rates by 8 percent.

Additional State and Local Government Funding for Higher Education
Current Operations

The amounts shown below are included in the "State and Local Government Support of Higher Education" section on the first data page for your state. (The dollar amounts shown on the first data page are shown in per capita terms.)

Student Aid	$ 20,755,879
Postsecondary vocational-technical education	$
State boards and commissions	$ 4,316,827
Centralized retirement or fringe benefits	$
Interstate contracts and reciprocity payments	$
Service functions provided centrally (e.g., computer service, library, telephone, etc.)	$
Centrally administered capital/debt service	$
Other	$

Clarification of Institutional Financial Reporting

These funds are noted here to clarify differences in practices among the states that affect the comparability of these data.

Capital Outlays	$
Debt Service	$
Sources:	
- state appropriations centrally allocated	$
- state and local appropriations to institutions	$
- tuition and fees	$
- auxiliary enterprises	$
- other	$

Tuition and Fees reappropriated by the state?

CONNECTICUT

Recent Trends

Fiscal year 1984 was one of improvement in revenues for Connecticut public higher education. After adjustment for inflation and enrollment growth, total revenues per student (excluding grants and contracts) gained 3.7 percent, fueled primarily by a 3.1 percent real-dollar gain per student in state and local appropriations. All types of institutions experienced the increase.

State and local appropriations to public higher education in Connecticut increased 30.1 percent between 1980 and 1984, substantially below the national average of 34.6 percent. With inflation at 36.6 percent (HEPI), state appropriations per student in constant dollars declined 4.0 percent, less than the national average loss of 8.2 percent. Tuition revenues increased substantially during the four years, resulting in a 40.8 percent improvement per student in constant dollars, 4th highest in the nation. As a result, total educational and general revenues per student in constant dollars increased 5.8 percent; there was a decrease nationally of 2.9 percent.

The 18 independent institutions in Connecticut increased tuition in constant dollars per student by 21.1 percent from 1980 to 1984, substantially above the national average of 13.4 percent. Revenues from other sources also increased sufficiently so that total educational and general revenues in constant dollars per student increased by 18.3 percent.

State Financing of Higher Education

Total per capita appropriations for higher education of $99 were low, 12 percent below the national average. As a result, appropriations per student of $3,342 were 10 percent below average, ranking the state 32nd. Revenues from other sources, including tuition, failed to improve total funding relative to national averages.

The state appropriated $13.3 million for student aid to both the public and independent sectors. State boards and commissions received $5.7 million. Independent institutions received some state funding for institutional support.

State Tax Base and Budget

Connecticut is a tax-rich state and had a potential tax capacity in 1983 of $1,456 per capita. This places the state 4th in the nation and 24 percent above the national average of $1,176. (In 1981, the state had a capacity 10 percent above average with a rank of 14th.) This wealth is the result of relatively high tax potentials in individual income (50 percent above average) residential and commercial property (54 percent and 24 percent above average), and general sales (17 percent above average).

Connecticut's tax effort in 1983 was 4 percent below the national average, with a state rank of 21st. (In 1981, Connecticut's tax effort was 3 percent above average, with a state rank of 17th.) Connecticut taxes general sales, selective sales, and property heavily but individual income very lightly. Collected tax revenues in 1983 of $1,402 were 19 percent above average, ranking the state 10th in tax funds available to support public services.

Connecticut allocated 7 percent of its tax revenues to higher education, substantially below the 10 percent national rate. As a result, state appropriations of $99 per capita for institutional support, student aid, and other support were 12 percent below the national average of $113.

If the total operating budget of the state (including nontax and federal revenues) is taken into account, elementary/secondary education, public welfare, and other received larger shares of the budget than the national average allocations, and higher education received 36 percent below the national average. Health and hospitals also received a proportionately smaller share.

Higher Education Enrollments

Colleges and universities in Connecticut enrolled 109,915 FTE students in fall 1983. The independent sector is proportionately much larger relative to the public sector than in most states. Enrollment in the universities as a share of total public enrollment was slightly smaller than the national average (28.3 versus 30.3 percent), comprehensive enrollment was above average (36.5 versus 25.9 percent), and two-year college enrollment was below average (34.4 versus 38.1 percent).

In 1983, Connecticut had a large number of high school graduates per 1,000 population compared to the nation.

Institutional Finances and Characteristics

Connecticut's comprehensive colleges have the state's largest public enrollment and enrolled 24,141 FTE students in fall 1983. Nevertheless, these institutions received low appropriations per student, 36 percent below the national average. This ranked Connecticut 43rd among the 45 states with public comprehensive colleges. Unable to make up this shortfall through other revenues, these institutions spent 31 percent less for instruction per student and 25 percent less for academic support, compared to national averages.

The state's two-year academic colleges, which enrolled 16,794 students in fall 1983, fared little better. Appropriations were 21 percent below the national average (ranked 37th out of 46 states), and expenditures for instruction per student were 39 percent below the national average (ranked last out of 46 states).

A considerably different situation existed at the University of Connecticut, which enrolled 18,655 students in fall 1983. Its appropriations were 26 percent above average for universities without medical programs (ranked 6th out of 26 states). Consequently, expenditures for instruction per student were 8 percent above the national average, and academic support was 70 percent above average.

Independent institutions in the state are well funded. Yale University, with average per student tuition revenues and with almost twice the typical endowment income, had 41 percent more funding than research universities with medical programs nationally. The eight comprehensive colleges in the state, enrolling 26,073 students, had above-average tuition and total funding.

Faculty salaries in both the public and independent institutions in Connecticut in 1983 were above the national average. Only salaries at the public two-year academic colleges were below average by 10 percent.

Data Notes

1983-84

Additional State and Local Government Funding for Higher Education
Current Operations

The amounts shown below are included in the "State and Local Government Support of Higher Education" section on the first data page for your state. (The dollar amounts shown on the first data page are shown in per capita terms.)

Student Aid	$ 13,273,000
Postsecondary vocational-technical education	$
State boards and commissions	$ 5,658,000
Centralized retirement or fringe benefits	$ 39,995,000
Interstate contracts and reciprocity payments	$
Service functions provided centrally (e.g., computer service, library, telephone, etc.)	$
Centrally administered capital/debt service	$
Other	$

Clarification of Institutional Financial Reporting

These funds are noted here to clarify differences in practices among the states that affect the comparability of these data.

Capital Outlays	$
Debt service	$ Not available
Sources:	
- state appropriations centrally allocated	$
- state and local appropriations to institutions	$
- tuition and fees	$
- auxiliary enterprises	$
- other	$

Tuition and Fees reappropriated by the state? *

Other Comments

* Tuition and fees are reappropriated at the Connecticut State Universities, the Regional Community Colleges, and the State Technical Colleges. Tuition and fees are not reappropriated at the University of Connecticut and the University of Connecticut Health Center which retain tuition revenues. Greater New Haven State Technical College was not included in this study.

(Indexes shown in bold are based on U.S. average = 100)

DELAWARE

Recent Trends

A 5.0 percent increase in appropriations in Delaware in fiscal year 1984 coupled with a 2.8 percent decline in enrollment provided a 2.8 percent real-dollar increase in state funding. Tuition revenues provided a further 10.1 percent improvement. Overall, the operating base of public institutions showed a net gain of 4.4 percent.

Delaware's appropriations to public higher education increased 41.1 percent between 1980 and 1984, greater than the national average. Enrollment growth of 2.6 percent was substantially below average. However, given enrollment growth and inflation of 36.6 percent (HEPI), appropriations per student in constant dollars increased .8 percent, ninth-highest gain in the nation; the national average declined 8.2 percent. Tuition increases at public institutions during the same period were also able to keep pace with inflation. This resulted in a 16.8 percent increase in purchasing power. Thus, total educational and general revenues per student in constant dollars improved by 3.3 percent during the four years.

The two independent institutions in the state improved the real value of tuition per student by 4.6 percent between 1980 and 1984. However, the increase in tuition revenues and revenues from other sources were not sufficient to offset inflation and enrollment growth. Thus, their total educational and general revenues per student in constant dollars declined 5.2 percent.

State Financing of Higher Education

Appropriations of $3,202 per student were 13 percent below average, ranking the state 36th. To make up the difference, public institutions in the state received exceptionally high tuition revenues, gifts, and other funds per student. This brought total funding to well above the national average.

State Tax Base and Budget

Delaware is a tax-rich state and had a potential tax capacity of $1,389 per capita in 1983. In this regard, the state ranked 8th in the nation, 18 percent above the national average potential of $1,176. This wealth was the result of high tax capacity in selective sales (20 percent above the national average), individual and corporate income (15 percent and 73 percent above average), and total property (37 percent above average).

Delaware's tax effort, however, was 18 percent below the national average, giving it a state rank of 42nd. As a result, collected tax revenues of $1,134 per capita provided tax funds slightly below the average amount available to support public services.

If the total operating budget of the state is considered (including nontax and federal revenues), higher education received the largest share relative to national averages (43 percent above average), and elementary/secondary education, public welfare, public services, and health and hospitals received a proportionately smaller share.

Higher Education Enrollments

The seven colleges and universities in Delaware enrolled 24,676 FTE students in fall 1983. The state's five public institutions enrolled 22,688 students, making the public sector proportionately large compared to the private sector (92 percent versus 8 percent). The proportion at the national level was 78 percent versus 22 percent. University enrollment, as a share of total public enrollment, was proportionately much larger than the national average (67.9 versus 30.3 percent) as was baccalaureate enrollment (7.9 versus 4.0 percent); two-year college enrollment was smaller (24.2 versus 38.1 percent).

In 1983, Delaware had a large number of high school graduates per 1,000 population compared to the nation.

Institutional Finances and Characteristics

Delaware has an inconsistent pattern of state support for its public institutions. In 1984, appropriations per student for the largest sector, the University of Delaware, were 21 percent below the national average for nonmedical universities (ranking 20th out of 26 states). In sharp contrast, appropriations to Delaware State College were 116 percent above average for baccalaureate colleges (ranking 3rd out of 38 states). Appropriations to the state's three two-year occupational colleges exceeded the national average by 7 percent.

In a remarkable financing effort, the University of Delaware made up its shortfall in appropriations by securing tuition revenues 92 percent above the national average. Private gifts, grants, and endowments were almost four and a half times the average, and revenues from other sources were almost two and a half times the average. The university was thus able to fund instruction per student at 46 percent above average (ranking 3rd out of 26 states) and to provide public services at 18 times the national average rate.

Delaware State College, with total educational and general revenues 83 percent above average, also funded instruction per student, research, and public service at above average levels.

Delaware's independent two-year academic college received above-average tuition revenues and endowment income per student. As a result, total educational and general revenues (including government grants and contracts) per student were 17 percent above the national average. The specialized professional college was substantially underfunded compared to national averages.

Faculty salaries lost ground generally in Delaware between 1979 and 1983, increasing at rates 15 percent slower than average in the public sector and 47 percent slower in the private sector. Despite these losses, faculty in the public sector are paid at the same level as the national average. Faculty in the independent sector are paid at the national average at the two-year academic and comprehensive colleges and 20 percent below the national average at the other-professional institution.

Data Notes

1983-84

Additional State and Local Government Funding for Higher Education
Current Operations

The amounts shown below are included in the "State and Local Government Support of Higher Education" section on the first data page for your state. (The dollar amounts shown on the first data page are shown in per capita terms.)

Student Aid	$
Postsecondary vocational-technical education	$
State boards and commissions	$
Centralized retirement or fringe benefits	$
Interstate contracts and reciprocity payments	$
Service functions provided centrally (e.g., computer service, library, telephone, etc.)	$
Centrally administered capital/debt service	$
Other (contracts with independent professional schools in other states)	$

Clarification of Institutional Financial Reporting

These funds are noted here to clarify differences in practices among the states that affect the comparability of these data.

Capital Outlays	$
Debt Service	$
Sources:	
- state appropriations centrally allocated	$
- state and local appropriations to institutions	$
- tuition and fees	$
- auxiliary enterprises	$
- other	$

Tuition and Fees reappropriated by the state?

DISTRICT OF COLUMBIA

Recent Trends

The District of Columbia's higher education system is almost entirely independent in character. In 1984, only 13 percent of the District's students enrolled in its single public institution. That same year the University of the District of Columbia (UDC), a comprehensive institution, received $60.8 million in local support. Appropriations to UDC increased 26.2 percent from 1980 to 1984, far below the national average of 34.6 percent. This low increase was due partly to the high level of existing funding and partly to an 1.9 percent decline in enrollments. When inflation is taken into account, appropriations per student in constant dollars declined 5.9 percent. This decline was offset by a substantial 77.0 percent increase in tuition during the four years, which increased tuition revenues per student by 32.1 percent in constant dollars. However, tuition revenues were not sufficient to offset low appropriations and inflation, and as a result, total educational and general revenues per student in constant dollars decreased 3.1 percent; the nation experienced an average 2.9 percent decrease.

The District's 10 independent institutions, which enrolled 50,913 students in fall 1983, increased tuition between 1980 and 1984 to more than match inflation. This represented an 25.2 percent improvement in constant dollars per student. As a result, total educational and general revenues per student increased 17.7 percent, above the national average of 11.3 percent.

State Financing of Higher Education

The District of Columbia operates the smallest public higher education system in the United States, enrolling 12.7 FTE students per 1,000 population compared to the national average of 29.1 per 1,000 population. However, total per capita appropriations for higher education of $100 were only 11 percent below average. Relative to enrollment, appropriations per student were $7,900, 2.14 times the national rate, ranking the District 2nd in the nation. Revenues from other sources were low. Nevertheless, total support per student remained 63 percent above average.

State Tax Base and Budget

The District of Columbia is tax rich and had a potential tax capacity of $1,372 per capita in 1983. In this regard it ranked 9th in the nation, 17 percent above the national average of $1,176. This was the result of high tax potential for selective sales (38 percent above average), individual income (40 percent above average), corporate income (37 percent above average), and general sales (19 percent above average).

The District's tax effort was also high, 46 percent above the national average, ranking it 3rd in the nation. It secured $147 million in additional revenues by taxing individual income at 72 percent above the national rate. As a result, the District collected tax revenues of $2,007 per capita. This amount was 71 percent above average, ranking the District 3rd in tax funds available to support public services.

The District allocated 5 percent of its tax revenues to higher education, substantially below the 10 percent national rate. But due to high revenues, appropriations of $100 per capita for institutional support, student aid, and other support were only 11 percent less than the national average.

If the operating budget of the District is taken as a whole (including nontax and federal revenues), public welfare, public services, and other received a larger share of the budget relative to national average allocations, and higher education, elementary/secondary education, and highways received proportionately smaller shares.

Higher Education Enrollments

The 11 colleges and universities in the District enrolled 58,615 FTE students in fall 1983, making it the smallest public system and the largest independent system in the nation relative to population. The independent sector is proportionately much larger relative to the public sector than in most states (87 percent versus 13 percent).

In 1983, the District of Columbia had a small number of high school graduates per 1,000 population compared to the nation.

Institutional Finances and Characteristics

The University of the District of Columbia received appropriations per student of $7,900, 2.4 times the national average for comprehensive colleges (ranking 2nd out of 45 states). At the same time, tuition revenues per student were substantially below average and revenues from other sources were high. As a result, total educational and general revenues per student (excluding government grants and contracts) totaled $9,148, 2nd highest in the nation for comprehensive colleges.

Because of this exceptional funding, instruction and academic-support expenditures were substantially above average, as was spending for public service. Research expenditures per faculty member, however, were only one-third the national average.

The District has ten independent institutions. The universities with medical programs had above-average funding and above-average expenditures for instruction and academic support. The nonmedical universities received total educational and general revenues (excluding government grants and contracts) 2 percent below the national average. These institutions had above-average expenditures for instruction and below-average expenditures for academic support. To conduct its specialized educational mission for the deaf, Gallaudet College, through federal support, was funded in 1984 at over 5 times the average for a comprehensive institution. The independent institutions had public-service expenditures per capita that averaged 19 times the national rate.

In 1983 faculty salaries were above average at both public and private institutions. However, salary increases for the public sector between 1979 and 1983 fell behind national rates, growing 37 percent more slowly than elsewhere.

FLORIDA

Recent Trends

State appropriations to public higher education in Florida increased 11.1 percent in fiscal year 1984. The increase was sufficient to cover both inflation and a .5 percent increase in enrollments, and made for a 5.3 percent real-dollar increase in state funding. Even though tuition revenues did not keep up with inflation (tuition revenues slipped 1.4 percent per student in constant dollars), total E&G revenues (excluding grants and contracts) per student increased 3.2 percent in FY84.

The cumulative gain in funding in Florida's public sector between 1980 and 1984 created a 1.3 percent improvement in its overall revenue base. Increases of 48.2 percent in state and local funds for higher education in Florida were able to accommodate both the 7.2 percent increase in enrollments and the 3.9 percent loss in the value of per-student tuition revenues. The net result was a 1.3 percent real-dollar gain in revenues per student. All types of institutions shared in these gains except the medical research university and the two-year academic colleges. These institutions experienced losses of 2.2 percent and 3.1 percent, respectively.

From 1980 to 1984, Florida's independent institutions increased tuition revenues per student sufficiently to offset inflation, netting a 5.5 percent gain in constant dollars. Revenues from other sources also increased, so total E&G revenues per student in constant dollars rose 6.6 percent. All categories of institutions shared in the increases except for the baccalaureate institutions.

State Financing of Higher Education

Florida appropriated $124 per capita for higher education, above the national average. As in most states, almost all state funding is directed to the public sector; in Florida, 98 percent of all support went to aid either students or institutions in the public sector. Florida also provided student aid to the independent sector, but at below-average rates. This is not surprising given that Florida's enrollments in the independent sector are less than average.

State Tax Base and Budget

Florida had average resources to support public functions, ranking 19th nationally in tax capacity. The state's tax capacity was due to high levels of general sales, licenses, residential property, and death and gift transfers, which together counterbalanced the low capacity in other areas. However, except for selective sales, Florida had below-average tax rates in each of those categories. This low tax effort resulted in tax revenues one-quarter below typical levels, and it largely explains why, despite average tax capacity, Florida's tax revenues are so low.

According to Census Bureau figures, Florida's budget strongly emphasized expenditures for health and hospitals and public services, though the share of the state budget allocated to them fell between 1980 and 1984. Shares for elementary/secondary education, highways, and other functions were close to average, while welfare received 45 percent less than the typical share of the budget. Higher education's share of the budget was 18 percent below the national average.

Higher Education Enrollments

Relative to its population, Florida operated a small public higher education system and in FY84 enrolled 22.5 FTE students per 1,000 population. There was an unusually large concentration of students in the public community colleges in Florida, representing 55.5 percent of enrollments; in contrast, two-year students made up 38.1 percent of the total in most other systems. Enrollments in the university sectors were similar to the national average (29.3 percent versus 30.3 percent) and were smaller in the comprehensive institutions (15.2 percent versus 25.9 percent).

Institutional Finances and Characteristics

State appropriations for public higher education in Florida were above average for each type of institution. With the major emphasis on two-year institutions, higher education is relatively less expensive to support. In addition, the system's focus on graduate studies is lower than average, and schools are generally larger than average. This further reduces the financial load on the state and creates a system of higher education that is comparatively less expensive to operate.

Overall, state appropriations per student were 7 percent above the national average. At the University of Florida, the public research university in the state (with a medical program), state funding was 22 percent above the average for similar institutions. While below-average tuition revenues reduced this margin, the University of Florida still operated with total revenues per student (excluding government grants and contracts) that were average. The medical university (University of South Florida) received state funding per student 20 percent above average. And despite lower revenues from other sources, it also operated with total revenues per student that were average. Florida State University, the nonmedical university, was well funded by the state, receiving 38 percent more funds than average. Despite other revenues that were below average, its total base was better than the national pattern of similar schools (index 104). The public comprehensive institutions received 47 percent more in state funding than average, and when other revenues are factored in, the sector functioned with 28 percent more funding than average.

The two-year academic institutions, the largest single sector in the state, also received state appropriations that were above average for such schools (by 5 percent). Tuition revenues per student were 26 percent above average, the only type of institution in the state not receiving below-average revenues in this category. The two-year academic institutions as a whole operated with per-student funds that were 8 percent above average. In contrast, the independent institutions were funded at levels 20 to 40 percent below average, except for the two-year academic schools.

Faculty salaries in 1983 in Florida overall were about 10 percent below average in both the public and independent sectors. However, this overall profile varied by institutional type. The public universities and comprehensive institutions paid salaries at rates close to the average. In the two-year academic schools, however, average salaries were 20 percent below average. Between 1979 and 1983, salaries in all categories of institutions markedly improved, at rates 4 to 28 percent better than average, except for at the two-year schools. In sharp contrast, salaries in the large academic two-year sector increased by 27 percent less than salaries at other community colleges in the nation.

Data Notes

1983-84

Additional State and Local Government Funding for Higher Education Current Operations

The amounts shown below are included in the "State and Local Government Support of Higher Education" section on the first data page for your state. (The dollar amounts shown on the first data page are shown in per capita terms.)

Student Aid	$ 56,962,185
Postsecondary vocational-technical education	$
State boards and commissions	$ 7,003,080
Centralized retirement or fringe benefits	$128,143,389
Interstate contracts and reciprocity payments	$ 462,200
Service functions provided centrally (e.g., computer service, library, telephone, etc.)	$
Centrally administered capital/debt service	$
Other	$

Clarification of Institutional Financial Reporting

These funds are noted here to clarify differences in practices among the states that affect the comparability of these data.

Capital Outlays	$136,049,854*
Debt Service	$ 27,936,511
Sources:	
- state appropriations centrally allocated	$
- state and local appropriations to institutions	$
- tuition and fees	$
- auxiliary enterprises	$
- other	$

Tuition and fees reappropriated by the state? **

Other Comments

* Sources in order of primary funding: gross utilities and receipts tax, student building and capital improvement fees, private gifts and grants, state and federal government grants, and auxiliary funds.

** Tuition and fees are reappropriated at the universities but not at the community colleges.

The Department of Education considers all of the community colleges to be academic colleges and that South Florida Community College should not be a two-year occupational college, as listed in this study.

Source: Florida Department of Education

GEORGIA

Recent Trends

Following two consecutive years of constant-dollar losses in state funding, fiscal year 1984 provided a marked improvement for public higher education in Georgia. A 17.9 percent increase in state appropriations outpaced both inflation and a .8 percent enrollment growth, and resulted in an 11.4 percent per-student improvement in state funding, ranking Georgia 4th in the nation in this regard. Tuition revenues also showed real gains. As a result, constant-dollar increases per student improved by 10.7 percent. The four-year profile for the state was also positive.

Between 1980 and 1984, state appropriations in Georgia increased 56.3 percent, a rate 63 percent above average. Enrollment gains were also higher than average, at 13.0 percent. The net effect, after adjustment for inflation, was a 1.3 percent improvement in state support of public higher education. Given that the national average was a 8.2 percent loss in constant-dollar state support per student, Georgia's gain was significant.

Tuition revenues also kept pace with inflation, increasing 16.3 percent per student in constant dollars. As a result, the operating base for the public sector improved by 5.3 percent in real dollars between 1980 and 1984. Only six other states fared better in this regard than Georgia. All institutional categories shared in these funding gains, except the health-professional institution and two-year colleges.

State Financing of Higher Education

Although Georgia channeled a relatively large share of state tax revenues to higher education, the small size of the total state budget caused funding of higher education to be average. Georgia provided $113 per capita in support of higher education, with the bulk of state funding going to the public sector. Georgia allocated $2.70 per capita for student financial aid, compared to the U.S. average of $7.00 per capita.

State Tax Base and Budget

Georgia is a state with low inherent tax capacity, and the problem of raising revenues was somewhat exacerbated in 1983 by a tax effort 7 percent below average. In fact, Georgia's capacity to tax was below average in all categories, except selective sales and licenses. Further, the state underutilized its tax capacity in almost every category except general sales and individual income. As a consequence, state tax revenues were approximately one-fifth lower than average. Only 14 other states operated with less revenue per capita.

Georgia provided above-average budget shares to health and hospitals, funding them at twice the national average. Higher education received an average share of the budget. Public services and public welfare were low priorities in Georgia. The higher education share of the budget increased between 1980 and 1984, from 8.2 percent to 9.5 percent.

Higher Education Enrollments

Enrollments in 1984 were heavily concentrated within the three universities in the state (including Georgia Tech), which accounted for over 38 percent of the total. This is an unusually large share, and this type of education is more expensive to support. Associated with this heavy university emphasis, the state's share of graduate enrollments was 38 percent larger than average. These two circumstances combine to create a further financial load on the state.

Institutional Finances and Characteristics

Because FTE enrollment per 1,000 population was below average in the public sector, Georgia's lower level of state funding overall was more than counterbalanced. Per-student total E&G revenues in the public sector were 12 percent above average, and state revenues per student were 22 percent above average. However, state and total funding per student varied considerably among the different sectors.

The University of Georgia was above average for medical research universities in state funding (by 31 percent) and close to the average in total E&G revenues, on a per-student basis. The public baccalaureates were funded by the state at above-average rates (index 157). Georgia Institute of Technology received an above-average level of state funding and, with revenues from other sources, functioned with 25 percent more funding than other research universities (without medical programs). However, every other public sector functioned with funds that were between 5 and 50 percent below average.

Faculty salaries in Georgia's public institutions were generally below average for all ranks, though there have been substantial gains. There were significant variations among the different types of institutions. For instance, salaries at the universities were at or above the average for upper-rank faculty. At other types of public institutions (except the baccalaureates), salaries were generally 7 to 17 percent below average for the same faculty rank. These conditions existed despite recent salary increases at these schools, which exceeded national average increases by 19 percent.

Data Notes

1983-84

Additional State and Local Government Funding for Higher Education Current Operations

The amounts shown below are included in the "State and Local Government Support of Higher Education" section on the first data page for your state. (The dollar amounts shown on the first data page are shown in per capita terms.)

Student Aid	$ 15,352,079
Postsecondary vocational-technical education	$ 56,600,000
State boards and commissions	$
Centralized retirement or fringe benefits	$
Interstate contracts and reciprocity payments	$
Service functions provided centrally (e.g., computer service, library, telephone, etc.)	$ 1,386,000
Centrally administered capital/debt service	$
Other	$

Clarification of Institutional Financial Reporting

These funds are noted here to clarify differences in practices among the states that affect the comparability of these data.

Capital Outlays	$
Debt Service	$
Sources:	
- state appropriations centrally allocated	$ 17,935,428
- state and local appropriations to institutions	$
- tuition and fees	$
- auxiliary enterprises	$ 9,037,364
- other	$

Tuition and Fees reappropriated by the state? No

Other Comments

The teaching hospital budget of approximately $25,000,000 provides in part for indigent care, but it is not possible to determine the portion utilized for that purpose.

(Indexes shown in bold are based on U.S. average = 100)

HAWAII

Recent Trends

Hawaii's public system of higher education lost ground slightly in FY1984. After adjustment for inflation and enrollment growth, total revenues per student (excluding grants and contracts) declined .2 percent, primarily due to the 4.4 percent real-dollar decline per student in state and local appropriations. Appropriations to public institutions in Hawaii in absolute terms increased by 45.2 percent between 1980 and 1984, exceeding national rates of growth by 31 percent. With a small 3.6 percent increase in enrollments, the value of these state monies moved upward by 2.7 percent per student, even after adjustment for inflation. Tuition revenues per student in real dollars also increased by 13.4 percent, and as a result, overall E&G funding per student increased 3.8 percent. Funding gains were achieved by all institutional categories.

The gains in funding for the independent sector were larger, increasing from 1980 to 1984 by 4.5 percent in real dollars per student. The baccalaureate schools increased their operating budgets by 20.0 percent while the budgets of the specialized schools increased 12.0 percent.

State Financing of Higher Education

In FY1984, Hawaiians supported higher education at a rate 68 percent above the national average. State and local government provided $189 per capita to public colleges and universities, placing Hawaii 3rd in the nation in its support of higher education (following Alaska and Minnesota). State-supported student-aid programs received 4 percent of the budget; independent institutions received no support in Hawaii.

State Tax Base and Budget

Hawaii has an above-average tax capacity, ranking 11th nationally in 1983. In addition, the rate of taxation in the state was 8 percent above average. As a result, Hawaii brought in 23 percent more tax revenues per capita than average, raising $1,444 per person in 1984.

The state's tax structure emphasized sales and individual income tax categories, and 78 percent of all tax revenues were collected in those particular areas. Property taxes were a fairly minor source of Hawaii's tax revenues. Hawaii ranked 1st in the nation in potential in this category, but only 47th in efforts to utilize this source.

Census data (which include both tax revenues and federal revenue-sharing funds) established a budget of $2,429 per capita for the state in FY1984, a level 14 percent above average. Although the largest single share of taxes, 16.9 percent, was budgeted for elementary/secondary education, this share was 34 percent below average. Public services was next in size, garnering 12.3 percent of state expenditures, followed by public welfare at 11.6 percent and higher education at 11.2 percent--all average or above-average shares. Highways and health and hospitals received a smaller than average slice of the state budget, 7.0 and 7.3 percent respectively--shares that were 11 percent and 21 percent smaller than is typical. Still, because there was a larger than average state pie for public programs, the actual dollars involved were more than might be expected. Therefore, higher education was doubly benefited in its receipt of an above-average portion of the budget. Between 1980 and 1984 higher education's portion of the budget remained stable.

Higher Education Enrollments

Hawaii's higher education system is almost entirely public, and 90 percent of its students enrolled in public institutions. Half of the public students enrolled at the Manoa campus of the University of Hawaii, a medical research university. The state's other large sector, made up of two-year institutions, enrolled 40 percent of the students. Only 10 percent of students enrolled in public baccalaureate institutions.

Institutional Finances and Characteristics

Hawaii was generous in its support of higher education, and per-student appropriations were 29 percent above average. However, because revenues from tuition (in particular) and other sources were substantially below average, the net result was that per-student support in the public sector was only slightly better than the national average. However, relative funding rates varied by sector. The two-year occupational schools were most severely impacted, functioning with revenues that were one-third below average. The Manoa campus also was strongly affected; overall E&G revenues were 19 percent below average. The public baccalaureate schools had per-student revenues that were 4 percent above average, and revenues of the academic/comprehensive two-year schools were just 3 percent below average.

Since state funding is substantial and residents are already highly taxed, the major source of additional revenue would appear to be tuition. Tuition revenues in Hawaii in 1983 were approximately half those collected elsewhere. And in the two-year sector, such revenues were 68 to 72 percent below average. Although low tuition rates encourage access, their continuation poses important policy decisions for the state and its institutions, given the probable impact of relatively low operating revenues.

The effect of below-average funding in Hawaii's public system was less apparent in faculty salaries, which were slightly above national averages. However, from 1979 to 1983, when faculty salaries nationally were increasing by 36 percent, the gain in Hawaii was 33 percent. Salaries at the independent institutions also grew at rates substantially below average (24 percent in Hawaii, compared to a national average of 39 percent).

Data Notes

1983-84

Additional State and Local Government Funding for Higher Education Current Operations

The amounts shown below are included in the "State and Local Government Support of Higher Education" section on the first data page for your state. (The dollar amounts shown on the first data page are shown in per capita terms.)

Student Aid	$ 7,066,701
Postsecondary vocational-technical education	$
State boards and commissions	$ 7,357,798
Centralized retirement or fringe benefits	$
Interstate contracts and reciprocity payments	$ 874,451
Service functions provided centrally (e.g., computer service, library, telephone, etc.)	$ 3,223,110
Centrally administered capital/debt service	$
Other	$

Clarification of Institutional Financial Reporting

These funds are noted here to clarify differences in practices among the states that affect the comparability of these data.

Capital Outlays	$ 10,011,076
Debt Service	$ 2,529,642
Sources:	
- state appropriations centrally allocated	$ 339,488
- state and local appropriations to institutions	$ 5,148,680
- tuition and fees	$ N/A
- auxiliary enterprises	$ 2,767,011
- other	$ 4,384,539

Tuition and Fees reappropriated by the state? Yes

IDAHO

Recent Trends

Idaho increased appropriations to public higher education by only 15.8 percent between 1980 and 1984. During this same period, enrollments grew 7.1 percent, almost equal to the national rate of 7.3 percent. With inflation during the four years equaling 36.6 percent (HEPI), appropriations per student in constant dollars declined 21.0 percent. The national average was an 8.2 percent reduction. Institutions attempted to make up the difference by more than doubling tuition revenues, resulting in a 32.0 percent increase per student in constant dollars, but were not successful. As a result, total educational and general revenues per student in constant dollars decreased 6.6 percent.

In contrast, funding improvements were substantial in the private sector during the same four-year period. The independent institution increased tuition revenues per student by an average of 17.8 percent in constant dollars. Total educational and general revenues per student in constant dollars increased 20.0 percent, almost twice the national average increase of 11.3 percent.

State Financing of Higher Education

Relative to its population, Idaho operates a slightly smaller than average public higher education system; in 1984, it enrolled 27.1 FTE students per 1,000 population, compared to the national average of 29.1 per 1,000 population. Total per capita appropriations for higher education of $104 were 8 percent less than the national average. Appropriations per student of $3,837 were 4 percent above the national average, ranking the state 17th. Except for tuition, revenues from other sources were high, bringing total funding to 9 percent above the national average. Idaho's funding profile is impressive, given inflation and the repeated retrenchments in recent years.

The state appropriated $4.2 million for student financial aid. Postsecondary vocational-technical institutes received $11.5 million. State boards and commissions received $1.1 million. State funds were not used to support independent institutions.

State Tax Base and Budget

With a tax capacity of $980 per capita in 1983, Idaho fell below the national average of $1,176 by 17 percent, ranking the state 44th nationally. This low capacity was due, in part, to low tax potential in individual income (51 percent below the national average) and corporate income (27 percent below average). Idaho's tax effort was 13 percent below the national average, with a state rank of 38th. Idaho lost a potential $90 million in property taxes by not taxing at national average rates, and $98 million because of below-average tax rates on general sales. As a result of low capacity and effort, collected tax revenues of $848 per capita were 28 percent below average, ranking Idaho 46th in tax funds available to support public services.

Idaho allocated 12 percent of its tax revenues to higher education, substantially above the 10 percent national rate. As a result, even with low collected tax revenues, appropriations of $104 per capita for institutional support, student aid, and other support were only 8 percent below the national average.

If the total operating and capital budget of Idaho (including nontax and federal revenues) is considered, higher education and highways received a larger share of the budget relative to national average allocations; public welfare received a relatively smaller share.

Higher Education Enrollments

The seven colleges and universities of Idaho enrolled 27,566 FTE students in fall 1983. The public system, consisting of six institutions enrolling 26,502, had 96 percent of the students. University enrollment, as a share of the public total, was similar to the national mix (29.3 versus 30.3 percent), comprehensive and general baccalaureate enrollments were larger (57.2 versus 29.9 percent), and two-year college enrollment was much smaller (13.5 versus 38.1 percent). The independent institution in Idaho enrolled 1,064 FTE students in fall 1983.

In 1983, Idaho had an average number of high school graduates per 1,000 population compared to the nation.

Institutional Finances and Characteristics

The University of Idaho, which enrolled 7,752 students, received appropriations per student that were 39 percent above average for universities without medical programs. The comprehensive institutions received appropriations at the national average. Tuition revenues per student at these institutions were low (23 percent below average for the nonmedical university, and 22 percent below average for the comprehensives). Total educational and general revenues per student were 57 percent above average for the nonmedical universities, and 1 percent below average for the comprehensives. Expenditure patterns were similar, with instructional expenditures per student at the university 17 percent above average and at the comprehensives only 1 percent above average. The two-year academic colleges were extremely well funded, receiving appropriations ranking 8th in the nation.

Idaho's independent general baccalaureate college received below-average tuition revenues and secured total educational and general revenues (excluding government contracts) per student of 20 percent below average. Consequently, expenditures for instruction and academic support were substantially below average.

Faculty salaries in Idaho were generally below average for all ranks, though substantial gains were made in the independent sector between 1979 and 1983.

Data Notes

1983-84

Additional State and Local Government Funding for Higher Education Current Operations

The amounts shown below are included in the "State and Local Government Support of Higher Education" section on the first data page for your state. (The dollar amounts shown on the first data page are shown in per capita terms.)

Student Aid	$ 4,229,028*
Postsecondary vocational-technical education	$ 11,494,000
State boards and commissions	$ 1,100,000
Centralized retirement or fringe benefits	$
Interstate contracts and reciprocity payments	$
Service functions provided centrally (e.g., computer service, library, telephone, etc.)	$
Centrally administered capital/debt service	$
Other	$

Clarification of Institutional Financial Reporting

These funds are noted here to clarify differences in practices among the states that affect the comparability of these data.

Capital Outlays	$ **
Debt service that is part of state and local	$ **
Sources:	
- state appropriations centrally allocated ǂ	$
- state and local appropriations to institutions	$
- tuition and fees	$
- auxiliary enterprises	$
- other	$

Tuition and Fees reappropriated by the state? No

Other Comments

* Four-year public institutions only.

** Data are not reported centrally.

Two independent colleges, Ricks College and College of Idaho, were not included in this study because they had incomplete data sets.

(Indexes shown in bold are based on U.S. average = 100)

ILLINOIS

Recent Trends

Illinois achieved constant-dollar improvements in state support for higher education in fiscal year 1984. A 5.9 percent increase in appropriations coupled with a small decline in enrollments (.6 percent) provided a small 1.4 percent net gain. Tuition revenues provided a further 4.4 percent improvement. Overall, the operating base of public institutions showed a net gain of 2.7 percent.

In Illinois, state and local appropriations to higher education increased at slower rates between 1980 and 1984 than was typical and at rates that were surpassed by inflation and enrollment growth. The $1.0 billion appropriation for public institutions in 1984 represented a 17.2 percent increase from 1980, but only one-half the increase that occurred nationally. Complicating the situation, during this same period enrollments in the Illinois public sector increased by 9.5 percent. In the face of inflation and enrollment gains, the value of state monies in constant dollars per student dropped 21.7 percent. Only four states fared worse.

Overall, total E&G funding per student declined 14.6 percent in real dollars between 1980 and 1984. All categories of Illinois public higher education except the two-year occupational institutions experienced losses over this four-year time span. The occupational institutions increased funding by 7.3 percent. Other types of institutions had losses ranging from 2.2 percent to 16.9 percent.

Fueled by real-dollar gains in tuition revenues, the independent sector in Illinois gained 12.0 percent in its total E&G revenues per student, even after adjustment for inflation. Only the two-year occupational sector suffered a loss in the total purchasing power of its funds. Although the loss for the two-year occupational sector was substantial (57.9 percent), other private sectors gained as much as 29.7 percent.

State Financing of Higher Education

In 1984, Illinois spent $132 per capita to finance higher education. This level of support was above average. The state was diverse in its methods of supporting higher education, funding public and private institutions directly and providing student aid in both sectors. The state was above average in the extent to which it supported independent students and institutions, as well as in the amount of student aid it provided students attending public institutions in the state.

Illinois spent 12 percent of its higher education budget for student aid, a share that is more than twice the national average (index 251). The state also funneled 6 percent of its funds to the independent sector, again a share that is above average (index 169). The $124 per capita that public institutions received represents 94 percent of all higher education dollars in the state.

State Tax Base and Budget

Illinois ranked 24th in the nation in its inherent tax wealth and had a tax capacity that was 2 percent below average. Above-average tax capacity and tax rates in Illinois placed the state 14th nationally in tax revenues collected per capita. Collecting $1,233 per person in 1983, the state functioned with 5 percent more per capita in tax revenues than average.

The state's use of these funds showed an above-average emphasis on public welfare and public services (indexed at 113 and 112 respectively) and for highways (index 112) in 1984. On the other hand, relative shares of funding were 7 percent below average for higher education, 30 percent below average for health and hospitals, and 3 percent below average for elementary/secondary education. From 1980 to 1984, higher education's share of the state's budget increased from 8.0 percent to 8.8 percent.

Higher Education Enrollments

Total enrollment in the state's public institutions was average. Approximately 28.7 FTE students per 1,000 capita enrolled in public institutions, compared with the U.S. average of 29.1 per 1,000.

The Illinois system of public higher education places a much greater emphasis on two-year education than most state systems. Half of the public students attended two-year schools, whereas the U.S. average was 38 percent.

Institutional Finances and Characteristics

Appropriations at $3,174 per student were 14 percent below the U.S. average. However, state funding varied considerably by sector. In 1984, the Urbana campus of the University of Illinois (research university with medical) received state funding that was 6 percent below average. The medical universities were funded at 43 percent above average, primarily because the University of Illinois Medical Center reports data with the University of Illinois Chicago Center. The 8 comprehensive institutions received 2 percent more than the average. The universities without medical programs received state funds per student that were 16 percent below average. The 45 academic/comprehensive two-year schools and the 5 occupational two-year schools also received low state funding, at rates 16 to 25 percent below average. Higher tuition revenues in the academic/comprehensive two-year sector helped to offset this lower level of state funding. Still, the largest sector in the state, the two-year academic sector, operated with a total level of E&G funds that was 16 percent below average.

In general, tuition revenues in Illinois were 15 percent below average. At the University of Illinois--Urbana, they were 22 percent lower than average. As a result, total E&G funding was 12 percent below the U.S. average. The comprehensive sector obtained total revenues that were 2 percent above average per student, and medical universities operated with total revenues that were 24 percent above average. The nonmedical university operated with funds 26 percent below average. In general, the public institutions in Illinois received a below-average share of funds from state and local appropriations and a similar share from tuition. This created a mixed funding profile by institutional sector.

In the independent sector, tuition revenues were 5 percent above average per student; total E&G revenues were also above average by 7 percent. Seven of the nine sectors functioned with average or above-average funding, while the other two operated with funds that were 32 to 36 percent below average.

Faculty salaries in Illinois were above average at independent institutions and close to the average at public institutions. However, increases in recent years show that public institutions in this state have lost ground generally. In the public sector, faculty salaries grew 15 percent more slowly than average between 1979 and 1983, while in the independent sector the rate of salary increase almost equaled the national average.

Data Notes

1983-84

Additional State and Local Government Funding for Higher Education
Current Operations

The amounts shown below are included in the "State and Local Government Support of Higher Education" section on the first data page for your state. (The dollar amounts shown on the first data page are shown in per capita terms.)

Student Aid	$184,206,000*
Postsecondary vocational-technical education	$
State boards and commissions	$ 10,023,200
Centralized retirement or fringe benefits	$
Interstate contracts and reciprocity payments	$
Service functions provided centrally (e.g., computer service, library, telephone, etc.)	$ 200,000
Centrally administered capital/debt service	$
Other	$

Clarification of Institutional Financial Reporting

These funds are noted here to clarify differences in practices among the states that affect the comparability of these data.

Capital Outlays	$
Debt Service	$ Not available
Sources:	
- state appropriations centrally allocated	$
- state and local appropriations to institutions	$
- tuition and fees	$
- auxiliary enterprises	$
- other	$

Tuition and Fees reappropriated by the state? Yes **

Other Comments

* Includes tuition waivers of $29.7 million.

** Community college tuition and fees are not reappropriated.

The state of Illinois appropriation includes approximately $12 million that is used to help defray the operating costs of the University of Illinois Hospital. This is not a restricted appropriation, however, and it is not possible to determine whether the funds are for patient care or for educationally-related hospital operating costs.

(Indexes shown in bold are based on U.S. average = 100)

INDIANA

Recent Trends

State appropriations to public higher education in Indiana increased 16.5 percent in FY84. The increase was sufficient to cover both inflation and a 1.3 percent increase in enrollments, which resulted in a 9.5 percent real-dollar increase in state funding. This gain followed two years of retrenchment in state appropriations. Tuition revenues also kept pace with inflation, resulting in a real-dollar gain of 1.5 percent per student. As a result, total E&G funding per student increased by 5.7 percent, following two years of decline.

Over the longer term, FY80 to FY84, total funding per student in real dollars declined by 3.6 percent. Inflation-lagging increases in state appropriations were primarily responsible. Tuition revenues increased 12.4 percent per student in constant dollars during this same period. The general baccalaureates had the greatest decrease in constant-dollar revenues between 1980 and 1984, losing 11.2 percent in purchasing power per student. The medical research university saw a gain at 4.0 percent during this period.

State Financing of Higher Education

Indiana spent $89 per capita on higher education in FY84, below the national average. However, the number of students in the public sector was also below average by 6 percent. Since higher education received an above-average share of tax funds, the below-average level of state funding was a consequence of the size of the state's budget.

The vast majority of the state's higher education funds were given to the public sector, as was the case in most other states. Indiana provided $7.10 per capita for student-aid programs, just slightly above the U.S. average. Public institutional support accounted for 92 percent of higher education's budget, which was average; however, actual funding was 20 percent below average.

State Tax Base and Budget

Indiana is inherently less wealthy than average and had a potential tax capacity in 1983 of $1,012 per capita, ranking it 42nd in the nation and 14 percent below the national average of $1,176. (In 1981, the state ranked 33rd, with a capacity 9 percent below average.) Tax effort in Indiana was 11 percent lower than average, ranking the state 33rd. As a consequence, the amount of tax funds collected in 1983 was 24 percent below average. Low income-tax rates and a below-average utilization of selective sales-tax capacity account in major part for the low level of taxes collected in Indiana.

According to Census Bureau figures, higher education received 12.3 percent of the total state budget in 1984, a similar share to that received in 1980, and 29 percent above average. Elementary/secondary education and health and hospitals also received above-average funding. Highways received a typical budget share, whereas public welfare, public services, and other functions garnered smaller budget shares than average.

Higher Education Enrollments

The structure of higher education in Indiana is unusual, characterized by a heavy emphasis on university education. In Indiana, 78 percent of all public students enrolled in universities or comprehensive institutions (compared to the national average of only 60 percent). Reflective of this emphasis is the fact that 11 percent of all public-sector students in Indiana studied at the graduate level (compared to 8 percent nationally). Only two states had a larger proportion of graduate enrollments, and only five other states enrolled as many students at this level.

Indiana's system of public education, given its emphasis on university and graduate-level study, is therefore one of the most expensive public systems to operate. The state's private sector, in contrast, placed much less emphasis on university-level study and greater focus on comprehensive and baccalaureate education.

Institutional Finances and Characteristics

In general, Indiana's support per student for public institutions was 8 percent below the national average, since both state funding and enrollments were below average. However, funding per student among different categories of public institutions varied considerably. For instance, Indiana's public research university received 31 percent less per student than average, and the two-year occupational schools received 49 percent less than average. State funding for remaining sectors varied. The comprehensive sector received 25 percent more than average, and the other sectors received below-average amounts to the following degrees: 25 percent less for the medical university (Indiana University--Bloomington), 6 percent less per student for the university without medical (Ball State), 29 percent less for the three public baccalaureate schools, and 6 percent less for the academic/comprehensive two-year schools.

Funding to public institutions from other sources was strikingly high in Indiana. Tuition revenues were 41 percent above average, gifts 11 percent above average, and other sources 30 percent above average. As a result, revenues were improved in every sector, with the exception of university without medical. Still, only two sectors (the comprehensive institutions and the academic/comprehensive two-year schools) operated with funds above average for comparable institutions. Two large sectors (research university with medical and university with medical) functioned with 18 and 11 percent less, respectively, per student than is typical for similar institutions.

Faculty salaries in Indiana were below average in 1983 in both the public and the independent sectors, by 7 and 5 percent respectively. Below-average rates of salary increase in the public sector from 1979 to 1983 contributed to these low levels. A review of salaries by sector, however, is somewhat surprising. The two large universities, despite operating with funds that were 11 to 18 percent below average, paid their faculty in all three major ranks at rates equal to or close to national averages. By contrast, faculty in the same ranks at the other universities and comprehensive institutions were paid salaries approximately 8 to 14 percent below average for comparable ranks.

1983-84

Additional State and Local Government Funding for Higher Education Current Operations

The amounts shown below are included in the "State and Local Government Support of Higher Education" section on the first data page for your state. (The dollar amounts shown on the first data page are shown in per capita terms.)

Student Aid	$ 38,660,677
Postsecondary vocational-technical education	$ 23,372,966
State boards and commissions	$ 2,269,726
Centralized retirement or fringe benefits	$ 1,850,000
Interstate contracts and reciprocity payments	$
Service functions provided centrally (e.g., computer service, library, telephone, etc.)	$
Centrally administered capital/debt service	$
Other	$

Clarification of Institutional Financial Reporting

These funds are noted here to clarify differences in practices among the states that affect the comparability of these data.

Capital Outlays	$ 14,091,922
Debt Service	$ 30,039,431
Sources:	
- state appropriations centrally allocated	$
- state and local appropriations to institutions	$ 44,131,353
- tuition and fees	$
- auxiliary enterprises	$
- other	$

Tuition and Fees reappropriated by the state? No

Other Comments

The state treats expenditures for the State Board for Vocational Technical Education and for the Postsecondary Proprietary Education Commission as "other education" and not as "higher education."

The state replaces student fees dedicated for academic building debt service with a separate line item appropriation. For state policy purposes, these are capital expenditures. For institutional purposes and for HEGIS reporting, these are treated as additional general operating appropriations.

IOWA

Recent Trends

Iowa's public system of higher education lost ground in fiscal year 1984, with neither state and local appropriations nor tuition keeping pace with inflation and enrollment shifts. The constant-dollar value of funding fell 4.0 percent per student in this state. Decreases in real-dollar funding in FY84 ranged from .3 percent at the baccalaureates to 5.3 at the research universities.

The value of state funding dropped substantially in Iowa between 1980 and 1984. Although state appropriations of approximately $397 million to public institutions in 1984 represented a 32.3 percent increase over 1980 levels, enrollments grew at more than two and a half times the national rate, expanding by 19.3 percent to include over 92,000 FTE students. The increase in enrollments was the fourth largest in the nation. As a result, state funding per student, adjusted for inflation, shrank by 18.9 percent from four years earlier. Tuition revenues, after adjustment for inflation, also declined in the public sector (by 4.3 percent). These losses meant that the real-dollar base of revenues was reduced by 15.8 percent per student at public institutions in Iowa. Only Alaska and South Dakota suffered greater losses in the per-student purchasing power of their public sector.

All sectors of public institutions were affected by these funding losses. The greatest losses in total funding per student were in the two-year colleges (of from 20.1 to 21.5 percent).

State Financing of Higher Education

Iowa spent $122 per capita to support higher education in 1984, a level 8 percent above average. This high rate of support is the result of a larger than average share of the state's budget going to higher education. In acknowledgment of the high percentage of enrollments in independent institutions, Iowa provided large amounts of state student aid to students in private colleges. The state provided an average budget share in public institutional support, but given the relatively large size of the state pie, public institutional support was above average. Iowa also provided funding for state boards.

State Tax Base and Budget

In tax capacity in 1983, Iowa was 9 percent below average, while its tax rates were 9 percent above average. As a consequence, the state revenues were average. Iowa's tax capacity resided largely in high levels of licenses, farm property, and death and gift transfers. Its tax structure, however, capitalized heavily on individual income taxes and property tax, which were the primary source of state revenues.

Iowa allocated unusually large shares of its state budget both to highways and to higher education, 70 and 43 percent larger than average, respectively. Elementary/secondary education received an average budget share. Public services and public welfare, by contrast, received less of the state budget than is generally the case (by 12 percent and 6 percent respectively), though public welfare received more of the state budget in 1984 than in 1980. Higher education's portion of state expenditures also improved from 1980, shifting from 12.3 to 13.6 percent of the budget.

Higher Education Enrollments

In 1984 Iowa operated a relatively expensive system of public higher education. Fifty-five percent of its students enrolled in research universities, compared to 17 percent of students nationally. Reflecting this structure, Iowa tied with Kansas as the top state in graduate enrollment, with 12 percent of its statewide enrollments at the graduate level. This contributed further to the expense of its system. Thirty-five percent of the students attended two-year institutions, and the remaining 10 percent were in the state's comprehensive institution (University of Northern Iowa).

The independent sector was largely baccalaureate in character, with 70 percent of all independent students in one of 24 such colleges in Iowa. The remaining private students were in comprehensive, two-year, or professional institutions.

Institutional Finances and Characteristics

With above-average state funding to higher education and an average number of students, the level of per-student state support was 17 percent above average in Iowa's public system. Revenues from other sources also were above average overall in the public sector, although there were variations by segment. The largest sector, the research universities, operated with 19 percent fewer funds than average, while all other segments received funding between 7 and 29 percent above average.

In the private sector, funding was mixed. The largest sector, the baccalaureate institutions, was funded at levels 7 percent below the average. The comprehensive sector was similarly funded (6 percent below average). The two-year institutions, on the other hand, varied in funding, operating at levels between 39 percent above average for the academic/comprehensives to 12 percent below average for the occupational two-year schools.

Faculty salaries at the public research universities and comprehensive institutions were below average by 7 and 8 percent respectively, though faculty at the associate and assistant ranks were paid at rates closer to the U.S. average. Faculty at the public two-year institutions were also paid at below-average rates but by larger margins--17 to 21 percent below average. Rates of salary increase for faculty in the public sector were average between 1979 and 1983.

Data Notes

1983-84

Additional State and Local Government Funding for Higher Education Current Operations

The amounts shown below are included in the "State and Local Government Support of Higher Education" section on the first data page for your state. (The dollar amounts shown on the first data page are shown in per capita terms.)

Student Aid	$ 20,410,000
Postsecondary vocational-technical education	$ 63,598,000*
State boards and commissions	$ 823,000
Centralized retirement or fringe benefits	$
Interstate contracts and reciprocity payments	$
Service functions provided centrally (e.g., computer service, library, telephone, etc.)	$
Centrally administered capital/debt service	$
Other	$

Clarification of Institutional Financial Reporting

These funds are noted here to clarify differences in practices among the states that affect the comparability of these data.

Capital Outlays	$111,866,000
Debt Service	$ 25,846,000
Sources:	
- state appropriations centrally allocated	$
- state and local appropriations to institutions	$ 13,546,000
- tuition and fees	$ 24,066,000
- auxiliary enterprises	$ 15,444,000
- other	$ 84,656,000

Tuition and Fees reappropriated by the state? No

Other Comments

* Includes area community colleges and area vocational schools by definition made to the University of Iowa for medically indigent patients.

Des Moines Area Community College, Kirkwood Community College, and Scott Community College are considered two-year occupational colleges in this study, but are classified as two-year academic colleges in Iowa.

(Indexes shown in bold are based on U.S. average = 100)

KANSAS

Recent Trends

State appropriations for public higher education in Kansas increased by only 2.8 percent in fiscal year 1984. Given inflation and a 1.1 percent increase in enrollments, this meant a 3.3 percent reduction in state support. Constant-dollar increases in tuition revenues outpaced inflation, which made for an 11.8 percent improvement, but were not sufficient to offset the decline in state funding. As a result, total revenues per student declined .7 percent in constant dollars. Funding varied though from a 9.0 percent increase at the medical research university (Kansas State University) to a 17.6 percent decline at the health-professional institution.

The Kansas funding picture for the four years 1980 to 1984 shows a loss in purchasing power per student (1.5 percent). State appropriations to public institutions in Kansas between 1980 and 1984 increased by 34.8 percent to $361 million, but were not enough to compensate for the 5.4 percent increase in enrollments and the 36.6 percent inflation. Thus, the value of state dollars decreased by 6.4 percent per student over the four-year time span. Decreases in state funding were not evenly distributed across all categories of schools, and three sectors (the two categories of two-year schools and the health-professional sector) showed gains in inflation-adjusted state funding. All other categories experienced erosion of 6.6 to 12.2 percent in real-dollar state funding per student.

Large increases in tuition revenues were not sufficient to offset the loss in state funding between 1980 and 1984, so total revenues per student in constant dollars decreased 1.5 percent. The research university with medical (Kansas State University) had the largest loss in overall funding in the state, of 3.1 percent in constant-dollar spending power. By contrast, the health-professional institutions improved funding by 15.3 percent.

For the independents in Kansas, the period 1980 to 1984 provided an average gain of .8 percent in their spending per student. In the most recent year, FY84, there was a 9.4 percent gain in inflation-adjusted revenues per student at independent institutions.

State Financing of Higher Education

Despite an average state budget, Kansas directs a proportionately greater share of its funds to higher education. At $130 per capita in 1984, higher education received 16 percent more funds than average. This high level of support ranked Kansas 9th in the nation in per capita funding of higher education, and of these funds, 99 percent went to the public sector. Kansas also provided student aid to students attending independent institutions in the state, despite the small size of that sector.

State Tax Base and Budget

In 1983 Kansas was 2 percent above average in tax capacity but 8 percent below average in tax effort. Tax revenues, at $1,112 per capita, were 5 percent below average. Kansas ranked among the top ten states in the nation in tax capacity in selective sales, commercial and industrial property, and severance. Kansas obtained above-average tax funds from property taxes, with other leading sources of state tax revenues being general and selective sales, and individual income.

Higher education and highways were the only two budget categories in the state that received above-average budget shares. Higher education received 12.8 percent of the budget, a share 34 percent greater than the norm. That share of funding increased from 10.9 percent in 1980. The share of funding for highways decreased during this period, though highways received a share that was 44 percent larger than usual. These above-average shares of the budget come at the expense of public welfare, public services, and other, which received shares between 6 and 28 percent below average.

Higher Education Enrollments

The Kansas system of public higher education is relatively more expensive in character than average due to the heavy emphasis on university-level education and graduate study. In Kansas, 41 percent of students enrolled in universities, compared to 30 percent nationally. In addition, the average size of a public institution in the state was approximately 30 percent smaller than average, creating additional expense.

Institutional Finances and Characteristics

Per capita state funding to the public sector was above average, as were enrollments. Although this combination created a level of per-student state support that was 8 percent greater than average, the structure of higher education in the state dilutes these funds. Kansas State University functioned with 31 percent less per student than other medical research universities, including 26 percent less per student in state support. The University of Kansas (nonmedical university) received per-student appropriations that were 7 percent below the national average; for the comprehensive institutions, state support per student was 12 percent below average. On the other hand, the two-year institutions appeared to be particularly well funded by the state, and the University of Kansas Medical Center also received above-average state support. These patterns were generally repeated in the total revenue profiles of these schools. In conclusion, then, large state contributions to higher education were somewhat diluted by a large student population that is concentrated in relatively expensive forms of education. Kansas State University appears to be impacted the most and functions with 31 percent less per student than similar institutions elsewhere.

Faculty salaries were below average at both public and private institutions. In the public sector, faculty at the upper ranks were most affected. Overall, between 1979 and 1983 faculty salaries increased at the national level, although the university increases were below average.

Data Notes

1983-84

Additional State and Local Government Funding for Higher Education Current Operations

The amounts shown below are included in the "State and Local Government Support of Higher Education" section on the first data page for your state. (The dollar amounts shown on the first data page are shown in per capita terms.)

Student Aid	$ 4,736,933
Postsecondary vocational-technical education	$
State boards and commissions	$ 1,280,565
Centralized retirement or fringe benefits	$
Interstate contracts and reciprocity payments	$
Service functions provided centrally (e.g., computer service, library, telephone, etc.)	$
Centrally administered capital/debt service	$
Other	$

Clarification of Institutional Financial Reporting

These funds are noted here to clarify differences in practices among the states that affect the comparability of these data.

Capital Outlays	$ 20,615,350*
Debt Service	$ 9,829,419*

Sources:

- state appropriations centrally allocated	$
- state and local appropriations to institutions	$
- tuition and fees	$
- auxiliary enterprises	$
- other	$

Tuition and Fees reappropriated by the state? Yes

Other Comments

* Includes only public institutions.

KENTUCKY

Recent Trends

Adjusted for inflation and enrollment shifts, total funding for the public sector in the state in 1984 evidenced a 5.3 percent improvement. The state increased its contribution in absolute funding by 11.9 percent, which when adjusted for price increases and enrollment shifts, left a 6.5 percent real-dollar improvement in support. Similarly, tuition revenues increased by 7.9 percent in constant dollars per student.

In the four-year period 1980 to 1984, state revenues allocated to public higher education increased by 33.8 percent to $419 million. However, with inflation and a 4.4 percent increase in the number of students to support, this funding increase translated into a 6.2 percent dip in the value of state monies for public higher education. Tuition revenues increased sufficiently to more than offset inflation, which created a 15.8 percent increase per student in constant dollars. Despite the gains in tuition revenues, total E&G funding declined by 2.1 percent overall. The impact varied by sector. The comprehensives and general baccalaureates experienced losses in funding, of 3.4 percent and 15.4 percent respectively. In contrast, the medical universtiy operated with total funding per student 11.7 percent above the national average.

For the independent sector, there was an inflation-adjusted increase of .1 percent per student in FY84 in total revenues; the four-year period was worse, however, with an decrease in total E&G funding of 1.6 percent per student in real dollars.

State Financing of Higher Education

Kentucky spent $107 per capita in 1984 for higher education, below the national average. This level of support is remarkable, given that the state's budget was 28 percent smaller than average. Almost all of these funds were funneled to public institutions. A small amount supported student aid in both the public and private sectors.

State Tax Base and Budget

Kentucky was below average in 1983 in both its capacity to raise taxes and its willingness to do so. As a result, tax revenues collected in 1983 were 28 percent less than the U.S. average. Only four other states had fewer funds to finance public programs: Arkansas, Mississippi, Alabama, and Tennessee. Kentucky had above-average capacity in farm property taxes and severance taxes. Its tax effort, however, was above average only in individual income, death and gift transfers, and severance taxes.

Higher education and highways received above-average budget shares in Kentucky. Health and hospitals received the smallest relative share of the budget, 23 percent below the U.S. average. Public services were also a relatively low priority, receiving 11 percent less than average. Elementary/secondary education's share of the budget was 4 percent below average. Higher education is clearly a preferred state activity, and its share of the state budget increased between 1980 and 1984 from 10.2 to 11.0 percent.

Higher Education Enrollments

Kentucky's public system in 1984, while smaller than average in size, was significantly more university/comprehensive oriented and therefore more graduate in character. Kentucky enrolled 74 percent of its students in the public sector in university or comprehensive institutions, compared to 56 percent nationally. Similarly, graduate enrollment in Kentucky represented 10 percent of students, as contrasted with 8 percent nationally. This structure contributes to the financial requirements of the state's public higher education system.

Institutional Finances and Characteristics

Because of the smaller pool of students in Kentucky in 1984, state support per student was high. Kentucky provided $4,714 per student in 1984, a level 28 percent above average. This funding level was sufficient even to accommodate the state's more expensive structure of education. Every category of public institution was funded by the state at rates that were 12 to 40 percent above the average for similar classes of schools. Only the two-year academic colleges differed from this general profile. Though the two-year sector was relatively small in this state, representing only 17 percent of the state's public students, it was funded at rates that were one-quarter below the average for such schools. When all sources of general operating funds are considered, a similar profile prevails. That is, all sectors except the two-year schools operated with funds close to or above the average for comparable schools. For the two-year sector, funding was 23 percent below average.

Despite substantially above-average funding levels, Kentucky's faculty were underpaid in comparison to other states, on average by 9 percent. Recent rates of increase in faculty salaries have ameliorated this to some degree, though salaries in 1983 at the state's institutions were still under the national mean.

Data Notes

1983-84

Additional State and Local Government Funding for Higher Education
Current Operations

The amounts shown below are included in the "State and Local Government Support of Higher Education" section on the first data page for your state. (The dollar amounts shown on the first data page are shown in per capita terms.)

Student Aid	$ 8,605,400*
Postsecondary vocational-technical education	$
State boards and commissions	$ 3,088,144*
Centralized retirement or fringe benefits	$
Interstate contracts and reciprocity payments	$
Service functions provided centrally (e.g., computer service, library, telephone, etc.)	$
Centrally administered capital/debt service	$
Other	$

Clarification of Institutional Financial Reporting

These funds are noted here to clarify differences in practices among the states that affect the comparability of these data.

Capital Outlays	$
Debt Service	$
Sources:	
- state appropriations centrally allocated	$ 31,700
- state and local appropriations to institutions	$ 13,301,000
- tuition and fees	$
- auxiliary enterprises	$
- other	$

Tuition and Fees reappropriated by the state? No

Other Comments

* Includes state appropriation expenditures for SREB contract program.

** Includes $1,130,300 for programs which are not administrative costs of the coordinating agency.

(Indexes shown in bold are based on U.S. average = 100)

LOUISIANA

Recent Trends

Although state and local appropriations in Louisiana increased 3.5 percent in FY1984, they were unable to keep up with inflation and the growth in enrollments in the state (4.4 percent). As a result, the constant-dollar value of state funds fell 5.8 percent in FY1984 in Louisiana. Tuition revenues increased by 7.6 percent in constant dollars per student and overall, the result was a 2.6 percent decline in the funding capacity of the state's public system of higher education. Two of the six categories in the state received gains of 5.0 percent at the health-professional institution and 1.4 percent at the medical research university. The other types of institutions experienced losses ranging from 2.5 to 14.0 percent.

Over the longer run, between 1980 and 1984, funding for public higher education in Louisiana improved slightly. State appropriations for public higher education in Louisiana gained 56.8 percent between 1980 and 1984, reaching $493 million. However, when adjusted for inflation and a 17.2 percent increase in enrollments (fifth greatest in the nation), state funding declined 2.1 percent per student in real dollars. The increase in per-student constant-dollar tuition revenues helped ameliorate the situation along with revenues from other sources, and as a result, total funding increased .4 percent per student in real dollars. Funding varied, however, by sector. Only the health-professional institutions experienced any significant increase (of 46.0 percent) in its overall spending power. The two-year occupational colleges were most severely affected, with total funding per student declining 18.0 percent in constant dollars.

State Financing of Higher Education

Louisiana spent $113 per capita on higher education in 1984, an average rate. The vast share of these higher education funds was channeled to the public sector to support the institutions and state boards and commissions. Louisiana also allocated a small amount for state student aid.

State Tax Base and Budget

Louisiana had above-average tax capacity in 1983 but was extremely reluctant to tap this inherent wealth. Although the state ranked 16th among the states in tax capacity, tax revenues in the state were far below expected levels, and Louisiana ranked 43rd in tax revenues collected. Louisiana's tax potential is based on corporate income, commercial and industrial property, severance taxes, and selective sales tax. Louisiana's tax structure emphasized severance and general sales taxes.

The state's budget priorities included health and hospitals and highways, which received above-average shares of state expenditures. Public welfare is the only function that received an unusually small share of the budget, though that has improved slightly since 1980. Higher education received an average share of the state's budget in 1984, an improvement from four years earlier.

Higher Education Enrollments

Louisiana's system of higher education emphasizes education at comprehensive institutions, and 56 percent of public students enrolled in one of the state's eight such institutions in 1984. By contrast, the two-year segment was unusually small in this state, enrolling only 8 percent of public students, compared to the U.S. average of 38 percent. The public sector was far more graduate than typical, and Louisiana ranked among the leading ten states in its relative emphasis on graduate studies.

The independent sector was also heavily graduate in focus, with 79 percent of its students in either a university or a comprehensive institution; 23 percent of independent students enrolled at the graduate level, 21 percent more than average. The independent sector in Louisiana is very small, however, about half the average size.

Institutional Finances and Characteristics

In 1984, state support per student was 4 percent above the U.S. average. In general, public institutions in Louisiana operated with 2 percent less funds per student than the U.S. average. Operating revenues, however, varied substantially by category in Louisiana and were strongly diluted given the requirements of university/comprehensive institutions and graduate studies in the state. Only two sectors, the very small sector of academic two-year schools and the health-professional institution, functioned with above-average funding. All other sectors operated with a funding base that was 13 to 28 percent below average. The largest institution in the state, Louisiana State University, had total funding that was 27 percent less per student than medical research universities in other states.

While state funding per student was above average overall, tuition revenues were one-fifth below typical levels, and private gifts and grants were one-half the size of the national average. Further, government grants and contracts were also below average. Combined, then, the profile by sector is generally one of below-average support.

Despite low funding, faculty salaries at Louisiana State University were above average for the upper ranks. At the comprehensive institutions, faculty salaries for full professors were 8 percent below average; however faculty in other ranks were better paid. Faculty at the two-year institutions were paid at below-average rates. Between 1979 and 1983, faculty salaries in the public sector grew nearly one-fifth faster than those in other states.

Data Notes

1983-84

Additional State and Local Government Funding for Higher Education Current Operations

The amounts shown below are included in the "State and Local Government Support of Higher Education" section on the first data page for your state. (The dollar amounts shown on the first data page are shown in per capita terms.)

Student Aid	$ 3,112,792*
Postsecondary vocational-technical education	$
State boards and commissions	$ 6,205,945
Centralized retirement or fringe benefits	$
Interstate contracts and reciprocity payments	$
Service functions provided centrally (e.g., computer service, library, telephone, etc.)	$
Centrally administered capital/debt service	$
Other (nursing stipend, aid to private institutions)	$

Clarification of Institutional Financial Reporting

These funds are noted here to clarify differences in practices among the states that affect the comparability of these data.

Capital Outlays	$ 75,932,701
Debt Service	$ 9,234,610
Sources:	
- state appropriations centrally allocated	$ 574,171
- state and local appropriations to institutions	$ 75,000,000
- tuition and fees	$
- auxiliary enterprises	$ 9,593,400
- other	$

Tuition and Fees reappropriated by the state?**

Other Comments

* This amount does not include student aid directly appropriated to institutions and therefore is understated.

** Tuition and fees are appropriated but not as an offset to state appropriations.

Louisiana provides funds for the treatment of medically indigent patients in the LSU Medical Center budget.

MAINE

Recent Trends

State appropriations for public higher education in Maine increased only 4.0 percent in fiscal year 1984. Given the 5.4 percent change in prices from 1983 to 1984 (using the Higher Education Price Index), this meant a 1.1 percent reduction in state support. Constant-dollar increases in tuition revenues outpaced inflation, which made for a 2.9 percent net improvement. As a result, total revenues per student improved by .3 percent. By contrast, independent institutions experienced a 19.2 percent decrease per student in total E&G revenues, tied largely to a 17.6 percent tuition decline after adjustment for inflation and a 22.5 percent increase in enrollments.

Between 1980 and 1984, a 43.1 percent increase in appropriations to public institutions (16th highest in the nation) was enough to compensate for the 4.6 percent increase in students and the 36.6 percent (HEPI) inflation for the period. As a result, appropriations per student in constant dollars increased .3 percent. Tuition revenues per student in constant dollars also increased by 10.7 percent, 25 percent below the national average resulting in a 1.9 increase in total educational and general revenues per student in constant dollars.

In the independent sector tuition revenues per student in constant dollars declined 12.8 percent between 1980 and 1984. Combined with a 34.6 percent increase in enrollment, the result was a 19.6 percent decrease in total educational and general revenues per student in constant dollars, third lowest in the nation

State Financing of Higher Education

Maine operates a very small public higher education system relative to its population. Total appropriations of $67 per capita for higher education were 40 percent below the national average. As a result, appropriations per student of $3,025 were 18 percent below average, ranking the state 41st. Institutions made up the difference with high tuition revenues and revenues from other sources, so that total funding per student was at the national average.

State Tax Base and Budget

Maine has slightly less tax wealth than average and had a potential tax capacity of $1,061 per capita in 1983. This was 10 percent below the national average of $1,176, ranking the state 32nd in the nation. (In 1981, the state ranked 47th, with a capacity 21 percent below average.) The reason for this was low tax potential in individual income (26 percent below the national average), corporate income (17 percent below the national average), selective sales (9 percent below average), and property (6 percent below average).

Maine's tax effort was at the national average, with a state rank of 19th. Collected revenues of $1,065 per capita were 9 percent below average, ranking Maine 28th in tax funds available to support public services.

Maine allocated 6 percent of its tax revenues to higher education, substantially below the 10 percent national rate. As a result, appropriations of $67 per capita for institutional support, student aid, and other were 40 percent below the national average.

If the total operating budget of Maine (including nontax and federal transfers) is considered, highways and public welfare received a larger share of the budget compared to national average allocations, and higher education and health and hospitals received a proportionately smaller share.

Higher Education Enrollments

The 23 colleges and universities in Maine enrolled 36,069 FTE students in fall 1983. The public system, consisting of 12 institutions enrolling 24,663, had 68 percent of the students, making it a very small public system relative to the state's population. University enrollment, as a share of the public total, was larger than the national average (40.7 versus 30.3 percent); four-year college enrollment was slightly larger (31.4 versus 29.9 percent); and two-year college enrollment was much smaller (12.2 versus 38.1 percent). The 11 independent institutions enrolled 11,406 FTE students in fall 1983.

In 1983, the number of high school graduates per 1,000 population in Maine was above the national average.

Institutional Finances and Characteristics

State appropriations to Maine's public institutions overall were 18 percent below national rates. The funding of individual types of institutions, however, was varied. The University of Maine at Orono, with an enrollment of 10,028 FTE students, received appropriations that were 36 percent below the national average for universities without medical programs (a state rank of 25th out of 26). The University of Southern Maine, enrolling 5,930 students, received appropriations 5 percent below average for comprehensive institutions. The state's four public two-year occupational colleges, enrolling 3,014 FTE students, received appropriations 45 percent above average (ranking the state 9th out of 45).

All sectors except the two-year occupational schools received above-average tuition revenues per student. As a result, overall total educational and general revenues per student equaled the national average. At the nonmedical university, E&G revenues per student were 5 percent lower than average, and those at the comprehensive institutions were 9 percent above average. Both institutional types emphasized research and public service, and instructional expenditures per student were about 20 to 30 percent below average. Instructional expenditures at the four two-year occupational colleges were 34 percent above average, reflecting the higher level of state appropriations.

The state's six independent baccalaureate institutions, which enroll a majority of the private students, received tuition revenues 74 percent above average. Together with above-average gifts and grants, endowment, and other revenues, total educational and general revenues for these schools were 69 percent above average. Consequently, expenditures for instruction, academic support, and research were well above average.

Faculty salaries in Maine were generally below average at public institutions for all ranks, though there were substantial gains. Between 1979 and 1983, faculty salaries increased 8 percent above the national average. The largest gain occurred in the comprehensive sector at 20 percent above the national average. In 1983 in the independent sector, salaries for all ranks except assistant professor were close to or at the national average.

Data Notes

1983-84

Additional State and Local Government Funding for Higher Education
Current Operations

The amounts shown below are included in the "State and Local Government Support of Higher Education" section on the first data page for your state. (The dollar amounts shown on the first data page are shown in per capita terms.)

Student Aid	$	1,615,427
Postsecondary vocational-technical education	$	
State boards and commissions	$	
Centralized retirement or fringe benefits	$	
Interstate contracts and reciprocity payments	$	
Service functions provided centrally (e.g., computer service, library, telephone, etc.)	$	
Centrally administered capital/debt service	$	
Other	$	

Clarification of Institutional Financial Reporting

These funds are noted here to clarify differences in practices among the states that affect the comparability of these data.

Capital Outlays	$	
Debt Service	$	
Sources:		
- state appropriations centrally allocated	$	
- state and local appropriations to institutions	$	
- tuition and fees	$	
- auxiliary enterprises	$	3,741,792
- other	$	

Tuition and Fees reappropriated by the state? Yes

MARYLAND

Recent Trends

State appropriations to public higher education in Maryland increased 6.5 percent in fiscal year 1984. The increase was not sufficient to cover both inflation of 5.4 percent and a 2.0 percent increase in enrollments, and the net result was a slight .7 percent decrease in state funding. Institutions made up this loss by increasing tuition revenues 6.2 percent per student in constant dollars. As a result, total E&G revenues per student increased 1.5 percent. The profile by sector was mixed, however. The large comprehensive institutions had a decrease in its purchasing power (6.3 percent), while the other types of institutions showed gains of .1 to 10.2 percent in total funding, even after adjustment for inflation and enrollment changes.

Between 1980 and 1984, state appropriations in Maryland increased an impressive 49.6 percent, 10th highest in the nation. After adjustments for inflation and enrollment increases of 5.9 percent, there was a real-dollar gain in state funding of 3.5 percent, ranking Maryland 5th in the nation. During this four-year period tuition revenues kept pace with inflation and enrollments and showed a 7.3 percent gain in real-dollar terms. As a result, total revenues adjusted for inflation and enrollments increased 3.6 percent. Funding varied by sector, ranging from a 21.3 percent increase at the nonmedical research university to a 7.7 percent decline at the comprehensive institutions.

The independent sector managed a major gain in support levels, with adjusted revenues per student rising by 26.7 percent. All categories among the independent institutions saw some improvement in the purchasing power of their funds.

State Financing of Higher Education

Higher education received a below-average share of the state's budget in 1984. The state's distribution of these funds within higher education, however, is atypical. Both the institutions themselves and students (through financial aid) received below-average shares, and the "other" category received an unusually large portion (four times larger than average). The state provided student aid and direct appropriations to both the public and independent sectors. The support given the independent sector is somewhat surprising given the small size of the sector.

State Tax Base and Budget

Maryland has an average tax base on which to draw, with particular strengths in individual income, general sales, and residential property. In 1983 the state made an above-average effort to tax this capacity, exerting the 13th-greatest tax effort in the country. Its tax structure placed major emphasis on individual income taxes, taxing at a rate 73 percent above average and ranking the state 6th nationally in its reliance on this tax source. Tax revenues in 1983 were $1,248 per capita, 6 percent higher than average.

Census figures for 1984 suggest that the state's budget exceeded the U.S. average by 8 percent. In Maryland, only public welfare and health and hospitals received significantly below-average shares of the state budget. Higher education received an average share, and all other functions received above-average shares, particularly public service (at 28 percent above). Higher education's share of the state budget improved between 1980 and 1984.

Higher Education Enrollments

Colleges and universities in Maryland enrolled 149,293 FTE students in fall 1983. The public sector was larger relative to the independent sector than in many states.

The mix of institutions in Maryland's public higher education system was fairly similar to the national mix, except that there was a greater emphasis on research universities and no enrollments in other universities (nonresearch).

Institutional Finances and Characteristics

State appropriations per student were 1 percent above national rates. The funding of individual types of public institutions, however, was more varied. For instance, the nonmedical research university (University of Maryland at College Park) received below-average funding from the state, 10 percent less than similar schools elsewhere. The comprehensive schools also received less per student than was typical for such schools (by 5 percent). For the health-professional school, the funding profile was even worse, with the state providing 53 percent less per student than average. By contrast, all other sectors were relatively well funded by the state, receiving support that ranged from 6 to 59 percent above average for similar schools.

Maryland's tuition revenues per student were 21 percent higher than average for public institutions. In total revenues (excluding grants and contracts), four segments operated with above-average or nearly average funding (the comprehensives, the baccalaureates, and both categories of two-year schools). The nonmedical research university (index 83) and the health-professional school (index 50) were substantially below average in funding levels.

Overall in 1983, faculty salaries in the public and private sectors were average. Salaries increased between 1979 and 1983 in Maryland's public sector at the national average. Increases at the health-professional institution was impressive, especially in light of diminished support during this period. At that institution (the University of Maryland--Baltimore Professional Schools), salary gains were 74 percent ahead of national rates for similar schools.

Data Notes

1983-84

Additional State and Local Government Funding for Higher Education
Current Operations

The amounts shown below are included in the "State and Local Government Support of Higher Education" section on the first data page for your state. (The dollar amounts shown on the first data page are shown in per capita terms.)

Student Aid	$ 5,931,093
Postsecondary vocational-technical education	$
State boards and commissions	$ 11,291,527
Centralized retirement or fringe benefits	$ 83,610,000
Interstate contracts and reciprocity payments	$ 2,272,646
Service functions provided centrally (e.g., computer service, library, telephone, etc.)	$ 0
Centrally administered capital/debt service	$ 0
Other (Operating expenditures for extension instruction, Center for Environmental Studies, and Agriculture Experiment Station)	$ 12,791,101

Clarification of Institutional Financial Reporting

These funds are noted here to clarify differences in practices among the states that affect the comparability of these data.

Capital Outlays	$ 42 818,500*
Debt Service	$ 25,000,000 (estimate)

Sources:

- state appropriations centrally allocated	$
- state and local appropriations to institutions	$
- tuition and fees	$
- auxiliary enterprises	$
- other	$

Tuition and Fees reappropriated by the state? No

Other Comments

* Appropriated in capital budget.

(Indexes shown in bold are based on U.S. average = 100)

MASSACHUSETTS

Recent Trends

Although state and local appropriations in Massachusetts increased 8.8 percent in FY84, they were unable to keep up with inflation of 5.4 percent and enrollment growth of 3.7 percent. As a result, the constant-dollar value of state funds fell .3 percent in FY1984 in Massachusetts. Tuition revenues were similarly handicapped and fell 1.6 percent in constant dollars per student. Overall, the result was a small .3 percent increase in the funding capacity of the state's public higher education system. Four of the seven sectors in the state were impacted with losses from 1.2 to 4.5 percent. By contrast, the two-year occupational sector had a gain of 11.1 percent.

The four-year time span 1980 to 1984 represented a time of overall improvement for the state's public higher education system, with the total funding improving 1.3 percent net of inflation and enrollment gains. This improvement in funding was attributable to significant increases in tuition revenues. Tuition collections between 1980 and 1984 grew in real-dollar terms by 22.9 percent and were sufficient to counteract the 7.2 percent erosion in overall state funding. All categories of institutions shared in improved overall funding except for the nonmedical university (University of Massachusetts--Amherst) where funding declined 12.3 percent per student in real dollars and the two-year academic colleges where funding declined 5.3 percent.

The independent sector in Massachusetts also registered gains in funding during the four-year period, despite a real-dollar loss of .7 percent in fiscal year 1982. Total revenues increased 18.4 percent in constant dollars per student.

State Financing of Higher Education

Despite these gains and a very large pool of tax revenues, Massachusetts directed a below-average share of funds to higher education. As a result, per capita funding of higher education at $92 was 28 percent below average.

The state apportions 90 percent of its higher education funds to the public and private institutions in the state, a smaller share than average. Another 9 percent of funds go to student aid, and the remaining 1 percent is allocated to public postsecondary education for other support (retirement benefits, the state board, and health-related support).

State Tax Base and Budget

Massachusetts has above-average tax capacity, and was more willing to tap that capacity than the average state in 1983. Due to this above-average rate, Massachusetts collected tax revenues in 1983 that were 20 percent above average. Massachusetts' tax potential is based on very high general sales, individual income, and residential property. Its tax structure emphasizes individual income, corporate net income, total property, and death and gift taxes. The state ranked 3rd in the United States in its corporate income taxes and 10th in personal income taxes.

Although the Massachusetts budget in 1984 was 5 percent larger than the national average, higher education received the lowest share of the budget of any public function in the state. For instance, only 5.0 percent of the state's expenditures went for higher education, approximately half of the national average. Highways, public services, and elementary/secondary education also received lower shares of the state's budget. On the other hand, public welfare in particular and other functions received greater than usual portions of the state's budget. Between 1980 and 1984, higher education increased its share of the state budget slightly, from 4.3 to 5.0 percent. By contrast, most other states allocated 9.5 percent of their state budget to this function.

Higher Education Enrollments

Total FTE enrollment in the public sector in 1984 was 26 percent below average (21.7 FTE students per 1,000). Fifty-eight percent of the state's students were at independent institutions. Only the District of Columbia enrolled a greater proportion of its residents in private colleges and universities. A below-average share of students enrolled in Massachusetts attended the university sectors, and an above-average share attended the comprehensive institutions. In the private sector, the opposite situation prevailed, with 40 percent of the students at universities.

Institutional Finances and Characteristics

State funding in 1984 of public higher education and student enrollment in the public sector were both below average. Appropriations per student of $2,758 were 25 percent below the U.S. average, although this varied by type of institution.

The nonmedical university (University of Massachusetts--Amherst) and the general baccalaureate colleges received nearly average funding from the state. The health-professional institution (Worcester Medical School) and the other-professional schools received 26 percent and 18 percent more than average. By contrast, all other sectors received below-average funding from the state in comparison to their counterparts elsewhere (16 to 36 percent less).

Revenues from other sources (tuition, gifts, other) in the public sector did not compensate sufficiently. As a result, three of the seven public institutional categories in Massachusetts functioned with funding that was 15 to 24 percent below average. Among the others, the University of Massachusetts Medical School--Worcester was the major exception and was funded at rates 78 percent better than average. The University of Massachusetts--Amherst and the baccalaureate institutions had average funding. The independent sector in Massachusetts, reflecting its dominant role in the state, was overall very well funded. Private institutions in the state generally operated with revenues per student that were 20 percent above average.

Faculty salaries overall in 1983 in the public sector were 2 percent above the national average, largely as a result of above-average gains between 1979 and 1983. Faculty salaries were strongest at the University of Massachusetts--Amherst, where they were above average by 15 percent. Salaries at the public comprehensive and baccalaureate institutions were also above average overall. In other categories of public institutions, salaries were below average. Faculty at the private institutions in the state were paid far better, receiving 11 percent more in salaries than their counterparts elsewhere.

Data Notes

1983-84

Additional State and Local Government Funding for Higher Education
Current Operations

The amounts shown below are included in the "State and Local Government Support of Higher Education" section on the first data page for your state. (The dollar amounts shown on the first data page are shown in per capita terms.)

Student Aid	$ 47,995,452
Postsecondary vocational-technical education	$
State boards and commissions	$ 5,636,331
Centralized retirement or fringe benefits	$ 65,691,539
Interstate contracts and reciprocity payments	$ 3,211,005*
Service functions provided centrally (e.g., computer service, library, telephone, etc.)	$ 5,960,983
Other	$ 502,205

Clarification of Institutional Financial Reporting

These funds are noted here to clarify differences in practices among the states that affect the comparability of these data.

Capital Outlays	$
Debt Service	$ Not available
Sources:	
- state appropriations centrally allocated	$ 10,000,000
- state and local appropriations to institutions	$
- tuition and fees	$
- auxiliary enterprises	$
- other	$

Tuition and Fees reappropriated by the state? Yes

Other Comments

* Not actual payments. This figure represents costs savings to students participating in the Regional Student Program.

MICHIGAN

Recent Trends

The 11.1 percent increase in state appropriations to Michigan's public institutions in 1984 was more than sufficient to cover both enrollment increases and inflation. Michigan's public institutions had real-dollar gains in total funding per student of 3.9 percent, based on a 4.8 percent gain in constant-dollar state funding and a 1.5 percent gain in inflation-adjusted tuition revenues.

The overall profile for the state between 1980 and 1984 was one of erosion, and constant-dollar revenues per student declined by 7.4 percent. Only the medical university and other-professional institutions were spared in this decline. In the remaining categories of institutions, the purchasing power of revenues in Michigan's public institutions fell at rates ranging between .6 and 20.3 percent.

Losses in state appropriations were primarily responsible for the loss in power. Between 1980 and 1984, the 17.1 percent increase in appropriations was completely offset by inflation and enrollment shifts, creating a 16.2 percent loss in the value of state monies for public higher education. Tuition revenues helped offset the loss of state funding, increasing by 14.5 percent per student in constant dollars. Still the total funding per student declined by 7.4 percent in constant dollar.

Losses in constant-dollar revenues per student also were evident in the independent sector. For those institutions, purchasing power decreased .6 percent in inflation-adjusted figures.

State Financing of Higher Education

Although Michigan's total budget was above average, higher education's slice of the tax revenues was smaller than average, resulting in per capita support that was 10 percent below average. Michigan provided a small amount of institutional support to independent institutions, while public institutions received the vast majority of higher education funds. Six percent of the state's higher education budget provided student aid in both the public and independent sectors.

State Tax Base and Budget

Michigan had a below-average tax base, but was more willing to tap that capacity than the average state. Due to this above-average effort, the state collected 16 percent more in tax revenues than the typical state. Michigan's tax structure heavily emphasizes both individual and corporate income and property taxes, which combined accounted for 75 percent of total tax revenues collected.

According to census figures, higher education is a favored state function in Michigan and received an above-average share of the state's budget in 1984. This contradicts the profile depicted by tax revenues alone, which suggests that higher education received a below-average share of the state's budget. Census figures indicate that public welfare, health and hospitals, and elementary/secondary education also received larger budget shares than average. Highways, public services, and other obtained smaller relative shares. Higher education's budget portion remained stable between 1980 and 1984.

Higher Education Enrollments

Michigan's public institutions enrolled 15 percent more students per 1,000 capita in 1984 than the average public system. By contrast, the independent sector in Michigan was only 64 percent as large as the U.S. average.

Michigan's students were somewhat more likely to be enrolled in a university, and 35 percent of Michigan's public students in 1984 studied at one of the four universities in the state. Generally in the U.S., only 30 percent of students received this type of education. Nine percent of all Michigan students were involved in graduate studies, a rate nearly 13 percent greater than the national average. Michigan's focus on university education and graduate study creates a relatively more expensive education system to support.

Institutional Finances and Characteristics

Because public enrollment levels in 1984 were greater than state appropriations, state support per student was 17 percent below average. However, income from tuition and private gifts was substantially greater than average, causing total E&G revenues per student (excluding government contracts) to approach the average (index 99).

However, total funding per student varied by category of institution. The university with medical school (Wayne State University) obtained 11 percent more revenues per student than its counterparts in other states. The comprehensives, general baccalaureates, and other-professional institutions also received above-average funding. In particular, three of the universities in the state were funded at levels 5 to 11 percent below those of similar institutions in other states. Given the significant graduate emphasis of these institutions, the level of underfunding is even more serious. The eight two-year occupational schools were 11 percent below average in total E&G funding per student, while the academic/comprehensive two-year schools were 2 percent below. Michigan's public institutions were above average in government grants and contracts.

Public-sector faculty salaries overall were 5 percent better than average, and most institutional categories generally followed this profile. However, salary increases between 1979 and 1983 lagged behind national rates, growing 7 percent more slowly than elsewhere.

Data Notes

1983-84

Additional State and Local Government Funding for Higher Education
Current Operations

The amounts shown below are included in the "State and Local Government Support of Higher Education" section on the first data page for your state. (The dollar amounts shown on the first data page are shown in per capita terms.)

Student Aid	$ 54,000,000 (estimate)
Postsecondary vocational-technical education	$
State boards and commissions	$
Centralized retirement or fringe benefits	$ 28,100,000*
Interstate contracts and reciprocity payments	$
Service functions provided centrally (e.g., computer service, library, telephone, etc.)	$
Centrally administered capital/debt service	$
Other	$

Clarification of Institutional Financial Reporting

These funds are noted here to clarify differences in practices among the states that affect the comparability of these data.

Capital Outlays	$ 8,158,600
Debt Service	$ 11,948,000**
Sources:	
- state appropriations centrally allocated	$
- state and local appropriations to institutions	$ 20,106,600
- tuition and fees	$
- auxiliary enterprises	$
- other	$

Tuition and fees reappropriated by the state? No

Other Comments

* Only partial amount of total costs.

** Contains annual lease payments to State Building Authority which are not technically debt service

(Indexes shown in bold are based on U.S. average = 100)

MINNESOTA

Recent Trends

State appropriations to public higher education in Minnesota increased 12.6 percent in fiscal year 1984. The increase was sufficient to cover both inflation and a .2 percent increase in enrollments, which meant a 6.9 percent real-dollar increase in state funding. Tuition revenues per student in constant dollars also kept up with inflation, increasing by 9.7 percent. As a result, total E&G revenues (excluding grants and contracts) per student increased 6.7 percent in FY84.

State appropriations to public institutions increased 35.8 percent from 1980 to 1984, far less than necessary to cover enrollment growth of 10.6 percent and inflation of 36.6 percent (HEPI). The result was a 10.2 percent decline in appropriations per student in constant dollars. The national average decline for the four-year period for all public institutions was 8.2 percent. However, public institutions were able to raise tuition adequately to offset inflation, creating a 19.6 percent increase per student in constant dollars, which resulted in a .6 percent increase in total educational and general revenues.

From 1980 to 1984, Minnesota's 29 independent institutions increased tuition revenues by 62 percent to offset inflation, netting a 13.5 percent gain in constant dollars, at the national average. Revenues from other sources also increased sufficiently, so total educational and general revenues per student in constant dollars rose 14.9 percent.

State Financing of Higher Education

State and local appropriations per capita of $191 were 82 percent above the national average. Appropriations of $3,480 per student were 6 percent below the national average, ranking Minnesota 29th. Above-average revenues from tuition, gifts and grants, and other sources improved the total funding of Minnesota's public institutions to 12 percent above average.

State appropriations for higher education of $207 per capita were 83 percent above average, ranking Minnesota 2nd in the nation. Of this amount, $156 million was used to support Minnesota's postsecondary vocational-technical education program. The state provided $13 per capita for student financial aid (ranked 3rd), which is 1.9 times the national average. Minnesota appropriated $12.3 million for state boards and commissions and $6.9 million for interstate contracts and reciprocity payments. Thirty cents per capita went to support independent institutions.

State Tax Base and Budget

Minnesota had a tax capacity of $1,141 per capita in 1983, almost equal to the national average, ranking the state 26th in the nation. The state has no specific taxes that have noteworthy high or low capacity.

The tax effort of Minnesota was 24 percent above national average rates, with a state rank of 7th. As a result of average capacity and above-average effort, collected tax revenues of $1,418 per capita were 21 percent above average, ranking Minnesota 7th in the nation in tax funds available to support public services.

Minnesota allocated 15 percent of its tax revenues to higher education, substantially above the national rate of 10 percent. As a result, appropriations of $207 per capita for institutional support, student aid, and other support were 83 percent above the national average.

If the total operating budget of Minnesota (including nontax and federal revenues) is considered, highways and public welfare received an above-average share of the budget, and higher education received an average share.

Higher Education Enrollments

The 57 colleges and universities in Minnesota enrolled 163,807 FTE students in fall 1983. In its 28 institutions, the public system enrolled 127,689 students (78 percent), making it an average-size system relative to the state's population. University enrollment, as a share of the public total, was larger than the national average (37.1 versus 30.3 percent), four-year college enrollment was substantially larger (38.3 versus 29.9 percent), and two-year college enrollment was much smaller (24.5 versus 38.1 percent). The 29 independent institutions in the state enrolled 36,118 FTE students in fall 1983, an average private enterprise relative to population.

Minnesota had a much larger number of high school graduates per 1,000 population than the U.S. average.

Institutional Finances and Characteristics

The University of Minnesota, with 37.1 percent of the state's public enrollment, received state appropriations per student 8 percent below average for research universities with medical programs. Tuition and fees at the University of Minnesota were 10 percent below average. However, the university collected 94 percent more revenue from private gifts and grants than average and, together with above-average revenues from other sources, secured total E&G revenues (excluding government contracts) per student that were above the national average by 5 percent. Expenditures for instruction and academic support at the university were average, while research and public service were above average.

The state's 6 comprehensive and 16 two-year academic colleges received state appropriations that were 26 and 24 percent below average, respectively. The two-year academic colleges received above-average tuition revenues and secured other funding to raise total E&G revenues per student to within 3 percent of the national average. The comprehensive colleges, on the other hand, received average tuition revenues; their total educational and general revenues per student were 21 percent below average (a state rank of 39th out of 45). Instructional expenditures per student were well below average for both the comprehensive and the two-year colleges. The two-year colleges, however, received a high level of academic support.

Minnesota's 13 independent general baccalaureate colleges accounted for 64 percent of the independent enrollments in the state in 1984. They received above-average tuition revenues and secured total educational and general revenues per student that were 7 percent above average. Expenditures for instruction and academic support were above average, and public-service expenditures per 1,000 population were 10 times the average.

Between 1979 and 1983 faculty salaries increased at the national average in both the public and private sectors. For the public institutions, average salaries in 1983 were 2 percent above average; the private institutions received salaries 9 percent below average.

Additional State and Local Government Funding for Higher Education
Current Operations

The amounts shown below are included in the "State and Local Government Support of Higher Education" section on the first data page for your state. (The dollar amounts shown on the first data page are shown in per capita terms.)

Student Aid	$ 54,333,000
Postsecondary vocational-technical education	$155,812,500
State boards and commissions	$ 12,378,100
Centralized retirement or fringe benefits	$
Interstate contracts and reciprocity payments	$ 6,867,900
Service functions provided centrally (e.g., computer service, library, telephone, etc.)	$ 2,596,900
Centrally administered capital/debt service	$
Other	$

Clarification of Institutional Financial Reporting

These funds are noted here to clarify differences in practices among the states that affect the comparability of these data.

Capital Outlays	$
Debt Service	$
Sources:	
- state appropriations centrally allocated	$ 51,900,000
- state and local appropriations to institutions	$ 7,012,300
- tuition and fees	$
- auxiliary enterprises	$
- other	$

Tuition and Fees reappropriated by the state? No

MISSISSIPPI

Recent Trends

State funding for public higher education institutions rose 12.3 percent in FY1984, sufficient to cover both inflation and a 2.3 percent growth in enrollments. Tuition revenues also surpassed inflation, resulting in a 3.8 percent gain in constant dollars. Overall, Mississippi public institutions received a 2.7 percent increase in total E&G revenues per student.

The value of state funding dropped substantially in Mississippi between 1980 and 1984. Although state appropriations of $308 million to public institutions in 1984 represented a 41.1 percent increase over 1980 levels (index 119), they were not sufficient to cover inflation or the 9.0 increase in enrollments. As a result, state funding per student shrank by 5.2 percent from four years earlier. During this same period, tuition revenues increased sufficiently to offset inflation, resulting in an increase of 2.6 percent per student in real dollars. Tuition revenues, however, were not sufficient to offset the decline in state funding, and as a result, total funding declined by 3.7 percent per student in constant dollars. During this same period, the independent sector in Mississippi saw its purchasing power per student increase by 1.7 percent.

State Financing of Higher Education

Mississippi spent over $300 million for higher education in fiscal year 1984. This amounted to $119 for each citizen, a level just slightly greater than the U.S. average.

Although Mississippi is the poorest state in the nation as measured by its capacity to raise taxes, the state places a high priority on higher education. In 1984 it allocated 16 percent of all tax revenues (and 11.8 percent of its total budget, including federal revenue-sharing funds) to this public function. The allocations far exceed the tax and budget shares of most states, and almost all of the funds--99 percent--are channeled into direct support of institutions. The remaining 2 percent provided student aid as well as support for the State Board of Trustees.

State Tax Base and Budget

Mississippi's capacity to raise taxes in 1984 was 32 percent below the national average. In fact, its capacity placed it among the lowest six states in the country in eight of the ten tax categories studied in this report. Further, the state did not fully utilize its capacity, taxing at rates 5 percent below average. Mississippi's tax system in 1984 emphasized general sales taxes, licenses, and severance taxes. As a result, Mississippi collected only $759 per capita for public purposes. The national average level was $1,176 per capita. Mississippi tax revenues were therefore 35 percent lower than the U.S. average, ranked 50th in the nation. This tax position improved somewhat with the infusion of federal revenue-sharing funds. In 1984, the state's total expenditure was $1,687 per capita, which was 31 percent below the average.

Mississippi devoted above-average shares of its state budget to highways (index 150), health and hospitals (index 181), and higher education (index 125). All other public functions received smaller than usual shares: elementary/secondary education (index 92), public welfare (index 88), public services (index 72), and other miscellaneous functions (index 71). From 1980 to 1984, the budget share for higher education remained stable.

Higher Education Enrollments

Mississippi's system of public education is more university oriented and in 1984 placed less emphasis on comprehensive-institution enrollments than was the case in most states. Also, the institutions in the system are, on average, smaller in size. These two characteristics indicate a system that is more expensive to operate than average. However, the lower emphasis on graduate enrollments in Mississippi's public system offsets this to some degree.

Institutional Finances and Characteristics

The profile for 1984 depicts a public higher education system funded at levels 15 percent above average and enrolling 9 percent more students than is typical. The equivalence of these numbers brought appropriations per student to the U.S. average (index 100).

In 1984, Mississippi allocated $3,702 per student to public institutions. However, the distribution of these funds varied by sector. Three sectors--the research university with veterinary medicine (Mississippi State University) (index 100), the comprehensive institutions (index 105), and the general baccalaureates (index 112)--were funded by the state at levels above those of similar schools elsewhere. The remaining categories were funded at rates below average. The universities without medical programs (University of Mississippi and University of Southern Mississippi) and the health-professional school (the University of Mississippi Medical Center) had the lowest relative levels of funding--14 and 20 percent, respectively, below levels for similar institutions across the United States.

Revenues from tuition were 11 percent below average in the public sector, revenues from private sources were 43 percent below average, and those from other sources were 14 percent above average. Government grants and contracts were below average. In net figures, total E&G revenues per student (excluding government grants and contracts) were just below the U.S. average, but with noticeable variations by sector. In total funding, only two categories operated with above-average funding, the general baccalaureates, and the comprehensives. One category had nearly average funding (the two-year academic colleges), and the remaining four functioned with funding that was 8 to 29 percent below average.

Faculty salary increases in the public sector between 1979 and 1983 were below average in all categories of institutions. Overall, faculty salaries for public institutions in 1983 were 23 percent below the U.S. average while those at independent institutions were 34 percent below.

Data Notes

1983-84

Additional State and Local Government Funding for Higher Education
Current Operations

The amounts shown below are included in the "State and Local Government Support of Higher Education" section on the first data page for your state. (The dollar amounts shown on the first data page are shown in per capita terms.)

Student Aid	$ 1,942,698
Postsecondary vocational-technical education	$
State boards and commissions	$ 2,460,236
Centralized retirement or fringe benefits	$
Interstate contracts and reciprocity payments	$
Service functions provided centrally (e.g., computer service, library, telephone, etc.)	$
Centrally administered capital/debt service	$
Other	$

Clarification of Institutional Financial Reporting

These funds are noted here to clarify differences in practices among the states that affect the comparability of these data.

Capital Outlays	$
Debt Service	$
Sources:	
- state appropriations centrally allocated	$
- state and local appropriations to institutions	$
- tuition and fees	$
- auxiliary enterprises	$
- other	$

Tuition and Fees reappropriated by the state? No

MISSOURI

Recent Trends

For public institutions in Missouri, fiscal year 1984 was one of erosion in their funding base. After adjustment for inflation and enrollment growth, these institutions had a 2.5 percent decline in total E&G funding per student over the previous year. The decline in revenues was almost entirely due to the 2.3 percent per student decrease in state appropriations in constant dollars. This was the third straight year in which state funding failed to keep pace with inflation.

The long-term picture (1980 to 1984) was worse, with constant-dollar state funding per student dropping 22.9 percent and total funding shrinking 11.4 percent. All categories of public institutions (except the small two-year occupational college) experienced real-dollar losses in state funding ranging from 3.3 percent at the medical research university to 14.2 percent at the other-professional institutions.

State Financing of Higher Education

Missouri spent $73 per capita in 1984 for higher education, 35 percent below average. Three percent of these funds were used for state student aid, and nearly all of the remaining funds were funneled to public institutions for general institutional support. A small amount of state aid is provided to independent institutions in this state.

State Tax Base and Budget

In 1983 Missouri ranked 35th in the nation in its level of taxable wealth. The state had notably better than average tax capacity in two categories: farm property and licenses. The state was close to average in the categories of general sales, selective sales, individual income, and corporate income. In the remaining five categories, the state was substantially below average in tax capacity.

The combined effect of these conditions was a tax capacity 11 percent below average. The state was restrained, however, in its use of this reduced tax capacity. Only 87 percent of it was tapped, resulting in tax revenues even further below average. The state collected 22 percent less than the U.S. average in tax revenues: $912 per capita, in contrast to the average state revenue of $1,176 per capita.

Health and hospitals, highways, public services, and elementary/secondary education were all priority state functions in 1984 and received above-average shares of the state and local government budgets. Higher education's share was average (index 97), while public welfare and other functions were given relatively smaller portions of the state's funds (indexed at 82 and 87 respectively). Higher education's share of the state's budget improved slightly between 1980 and 1984, from 9.0 to 9.2 percent.

Higher Education Enrollments

More of Missouri's public students enrolled in comprehensive institutions than in either universities or two-year institutions. Still, surprisingly, given the lower rates of enrollment at universities, there was an average number of graduate students enrolled in the public sector.

Enrollments in the private sector were more graduate in nature. Approximately one-quarter of the state's students enrolled at private institutions, a much larger percentage than was typical.

Institutional Finances and Characteristics

Enrollments were 11 percent below average in the public sector in 1984 while state funding was almost 30 percent below average. Because there were relatively fewer state dollars for the number of students to be supported, appropriations per student were 20 percent below average. However, individual sectors differed dramatically within that profile.

Among the largest public institutional sectors in the state (the research university with medical program, the comprehensive institutions, and academic/comprehensive two-year schools), state support ranged from 13 to 25 percent below average (13 percent less at the medical research university, 25 percent less at the comprehensive institutions, and 22 percent less at the academic/comprehensive two-year schools). If other sources of revenues are considered, these profiles improved some, such that the medical research university (the University of Missouri--Columbia) operated with 2 percent below-average funds, the comprehensive institutions at 21 percent less than their comparison group, and the two-year schools with 9 percent less. The net result is that all sectors except three in Missouri functioned with below-average support. The two-year occupational schools received three times the typical funding levels per student, and the medical university (the University of Missouri--Kansas City) obtained 15 percent more per student than its counterparts in other states.

Funding levels at the private institutions varied substantially. Only four sectors were well funded: the research university with a medical program (Washington University), the medical university (St. Louis University), and both categories of two-year schools. All other private institutions operated with 17 to 61 percent less funds per student than the U.S. average for similar institutions in other states.

Faculty salaries lost ground generally in Missouri between 1979 and 1983, increasing at rates 14 percent slower than average. With these losses, faculty in the public sector were paid at levels 10 percent below average; similarly, salaries in the private sector were also 10 percent below average. Full professors appear to be the most directly impacted, and almost none of the averages for this rank were close to the U.S. average.

1983-84

Additional State and Local Government Funding for Higher Education
Current Operations

The amounts shown below are included in the "State and Local Government Support of Higher Education" section on the first data page for your state. (The dollar amounts shown on the first data page are shown in per capita terms.)

Student Aid	$ 17,532,546
Postsecondary vocational-technical education	$
State boards and commissions	$ 605,164
Centralized retirement or fringe benefits	$ 16,139,599
Interstate contracts and reciprocity payments	$
Service functions provided centrally (e.g., computer service, library, telephone, etc.)	$
Centrally administered capital/debt service	$
Other	$

Clarification of Institutional Financial Reporting

These funds are noted here to clarify differences in practices among the states that affect the comparability of these data.

Capital Outlays	$
Debt Service	$
Sources:	
- state appropriations centrally allocated	$
- state and local appropriations to institutions	$ 11,390,000
- tuition and fees	$
- auxiliary enterprises	$
- other	$

Tuition and Fees reappropriated by the state? No

MONTANA

Recent Trends

The 8.9 percent increase in state appropriations to Montana's public institutions in 1984 outpaced both inflation and a 1.6 percent enrollment growth, creating a 2.0 percent per-student net improvement in state funding. Tuition revenues also showed real gains, increasing by 4.9 percent. As a result, constant-dollar revenues per student improved by 2.0 percent.

Montana's funding of public higher education increased dramatically between 1980 and 1984. Appropriations increased 71.3 percent, third highest in the nation. Even when enrollment growth of 13.7 percent is combined with an inflation rate of 36.6 percent (HEPI), appropriations per student in constant dollars increased 10.3 percent, again an increase third highest in the nation. Tuition increases also kept up with inflation, resulting in a 12.4 percent increase per student in constant dollars. As a result, total educational and general revenues per student in constant dollars increased a sizable 8.8 percent, the fourth largest increase in the country.

Enrollment at Montana's five independent colleges increased 20.6 percent between 1980 and 1984. Tuition revenues at the three independent general baccalaureate colleges matched inflation, with a 6.3 percent gain per student in constant dollars. As a result, total educational and general revenues per student in constant dollars increased .2 percent.

State Financing of Higher Education

Appropriations per student of $3,268 were 12 percent below average, ranking the state 34th. Revenues from other sources were even lower, failing to improve total funding for most types of institutions. Only the two-year academic institutions operated with total funding above average.

State Tax Base and Budget

Montana is a tax-rich state and had a potential tax capacity of $1,238 per capita in 1983, 5 percent above the national average of $1,176. This capacity, ranked 18th in the nation, was the result of high tax potential in general sales (15 percent above the national average), licenses (97 percent above average), and severance (190 percent above average).

Montana's tax effort was 6 percent below average, with a state rank of 26th. The state has no general sales tax and lost $260 million in potential revenues in 1983 as a result. This was partially offset by an additional $162 million in property taxes because of above-average property rates. As a result of high capacity and low effort, collected tax revenues of $1,159 per capita were only 1 percent below average, ranking Montana 19th in the nation in tax funds available to support public services.

If the total operating budget of Montana (including nontax and federal revenues) is considered, highways and elementary/secondary education received an above-average share of the budget, while higher education, public welfare, and health and hospitals received a proportionately smaller share. Between 1980 and 1984, higher education's share of the budget increased from 7.4 percent to 8.6 percent.

Higher Education Enrollments

The 14 colleges and universities in Montana enrolled 31,137 FTE students in fall 1983. The public system, consisting of 9 institutions, enrolled 28,192 (or 91 percent) of the students, making it a large system compared to the national average. Sixty-six percent of the students enrolled in comprehensive institutions, well above the national average (25.9). In contrast, the two-year academic schools enrolled only 6.4 percent of the students, well below the 38.1 percent national average. The 5 independent institutions in the state enrolled 2,945 FTE students in fall 1983.

In 1983, Montana had a larger number of high school graduates per 1,000 population than the national average.

Institutional Finances and Characteristics

The comprehensive institutions (Montana State University and the University of Montana) received appropriations per student 3 percent less than average, and tuition revenues per student 27 percent below average. However, private gifts, grants, and endowment were 69 percent above average, and as a result total educational and general revenues (excluding government contracts) per student were only 8 percent below average. Instructional and academic support expenditures per student were at the average, whereas research and public service were well above average. The state's single public baccalaureate college, Eastern Montana College, received state appropriations 5 percent above average and tuition revenues 13 percent below the national average. Total educational and general revenues (excluding government grants and contracts) were 2 percent below average. The three two-year academic colleges obtained above-average state support but received very low tuition revenues per student (6th lowest in the country).

The state has five small independent colleges, which generally received tuition revenues too low to meet the national average for educational and general revenues. The two two-year colleges, Salish Kootenai Community College and Dull Knife Memorial College, obtained special funding from other revenues, gifts and grants, and government contracts, which allowed them to fund instruction at a level substantially above the national average.

Between 1979 and 1983 faculty salaries in Montana's public institutions made substantial gains, increasing by 43 percent, 18 percent above the national average. Overall, in 1983 salaries were 5 percent below average. The independent sector salaries increased by only 31 percent, 20 percent below the national average. Overall, salaries at the independents were 28 percent below average.

NEBRASKA

Recent Trends

Appropriations for public higher education in Nebraska increased an average of 32.6 percent from 1980 to 1984. However, enrollment growth of 6.1 percent and an inflation rate of 36.6 percent (HEPI) caused an 8.5 percent decline in appropriations per student in constant dollars. All sectors except the two-year schools shared in the losses. Tuition revenues increased by 3.2 percent in real value per student but were not sufficient to offset the decline in state funding. Thus Nebraska public institutions experienced a 4.5 percent decrease in total E&G revenues per student in constant dollars.

The gains in funding for the independent sector were far larger, increasing from 1980 to 1984 by 9.3 percent.

State Financing of Higher Education

Nebraska operates a large public higher education system relative to its population and in FY84 enrolled 32.6 FTE students per 1,000 population, compared to the national average of 29.1 per 1,000. Per capita appropriations of $124 for higher education were also high, 10 percent above average. Thus, appropriations of $3,859 per student were 4 percent above average, ranking Nebraska 15th. Total educational and general revenues per student were 3 percent above average.

Nebraska appropriated no funds for student financial aid, whereas the national average was $7 per capita. The state provided $22.67 million for state technical community colleges. Independent institutions received no state support.

State Tax Base and Budget

Nebraska has an average potential tax wealth and had a tax capacity of $1,184 (21st in the nation) in 1983, 1 percent above the national average. The state has tax potential higher than average for farm property, yet lower potential than average for taxing individual and corporate income and residential and commercial property. Nebraska's 1983 tax effort was 6 percent below the national average, with a state rank of 25th. Nebraska collected $61.5 million in additional property taxes because of above-average rates, but this was more than offset by a $48 million loss in individual income taxes and a $32 million loss in general sales taxes because of below-average rates. As a result, collected tax revenues of $1,118 per capita were 5 percent below average, ranking Nebraska 22nd in the nation in tax funds available to support public services.

Nebraska allocated 11 percent of its tax revenues to higher education, above the 10 percent national rate. As a result, appropriations of $124 per capita for institutional and other support were 10 percent above the national average.

If the total operating budget of Nebraska (including nontax and federal revenues) is considered, highways and higher education received a larger share of the budget relative to national averages, while public welfare received a proportionately smaller share.

Higher Education Enrollments

The 25 colleges and universities in Nebraska enrolled 69,256 FTE students in fall 1983. The public system, consisting of 13 institutions, enrolled 56,566 (82 percent) of the students. University enrollment, as a share of the public total, was proportionately larger than the national mix (38.3 versus 30.3 percent), four-year college enrollment also was larger (36.3 versus 29.9 percent), and two-year college enrollment was much smaller (21.4 versus 38.1 percent). The 12 independent institutions in the state enrolled 12,690 FTE students in fall 1983.

In 1983, Nebraska had a larger number of high school graduates per 1,000 population than the national average.

Institutional Finances and Characteristics

The University of Nebraska--Lincoln, enrolling 21,675 students, received state appropriations per student 21 percent below average and collected tuition revenues 24 percent below average. It also secured total educational and general revenues (excluding government contracts) per student 19 percent below the average for research universities without medical programs. As a result, its expenditures for instructional and academic support were below average, although the university's public-service program was funded at 13 times the national average per 1,000 capita.

The state's three comprehensive colleges, enrolling 18,197 students, were severely underfunded, primarily because of appropriations 38 percent below average, the lowest level in the country. Expenditures for instruction per student were underfunded by 32 percent as compared to the national average.

On the other hand, the state's two general baccalaureate colleges were well funded by the state (21 percent above average) and secured total educational and general revenues per student 6 percent above average. Most favorably treated were the state's two-year academic colleges and four two-year occupational colleges. They received state appropriations 58 and 41 percent above average, respectively. The latter level of support ranks Nebraska 4th in the nation in state support of two-year academic colleges.

Creighton University, a comprehensive school, is the largest independent institution in Nebraska. Creighton received above-average tuition revenues, gifts and grants, and other revenues, resulting in total educational and general revenues (excluding government contracts) per student 73 percent above average. The seven independent baccalaureate institutions received funding 7 percent below average.

Faculty salary increases in Nebraska's public sector fell below the national average for all types of institutions except for the two-year schools. Despite the large increase, salaries in the two-year academic and occupational institutions were still 25 and 20 percent below the national average, respectively. Overall, increases for independent institutions were at the national average.

Data Notes

1983-84

Additional State and Local Government Funding for Higher Education
Current Operations

The amounts shown below are included in the "State and Local Government Support of Higher Education" section on the first data page for your state. (The dollar amounts shown on the first data page are shown in per capita terms.)

Student Aid	$ 8,736,379
Postsecondary vocational-technical education	$ 21,594,548
State boards and commissions	$ 308,838
Centralized retirement or fringe benefits	$
Interstate contracts and reciprocity payments	$ 1,688,356
Service functions provided centrally (e.g., computer service, library, telephone, etc.)	$ 9,567,055
Centrally administered capital/debt service	$
Other	$

Clarification of Institutional Financial Reporting

These funds are noted here to clarify differences in practices among the states that affect the comparability of these data.

Capital Outlays	$ 9,395,863
Debt Service	$ 3,412,361

Sources:

- state appropriations centrally allocated	$
- state and local appropriations to institutions	$ 5,785 480
- tuition and fees	$ 3,268 707
- auxiliary enterprises	$ 3,472,574
- other	$ 281,963

Tuition and Fees reappropriated by the state? Yes

NEVADA

Recent Trends

Nevada's 29.1 percent increase in appropriations for public higher education from 1980 to 1984 was effectively neutralized by a 22.8 percent increase in enrollments (third highest in the nation) and 36.6 percent inflation (HEPI). Thus, appropriations per student in constant dollars declined 23.0 percent (third worst in the nation). Although tuition revenues increased 7.9 percent, this improvement was insufficient to offset the decline in appropriations and enrollment increase, resulting in a 15.7 percent loss. Only three other states (Iowa, Alaska, and South Dakota) experienced worse declines in total educational and general revenues per student in constant dollars.

State Financing of Higher Education

Nevada operates a smaller than average public higher education system, enrolling 26.4 FTE students per 1,000 population in 1984. The state and local appropriations for higher education, at $85 per capita, were 24 percent below the national average. Thus, appropriations per student of $2,999 were 19 percent below average, ranking the state 43rd. Revenues from private gifts and grants and other sources slightly improved total funding relative to national averages. The state appropriated $904,338 for tuition reciprocity payments to other states.

State Tax Base and Budget

Nevada is a tax-rich state and had a potential tax capacity of $1,731 per capita in 1983 (3rd in the nation), 47 percent above the national average of $1,176. This capacity was the result of a very high tax potential in general sales (157 percent above the national average), selective sales (42 percent above average), licenses (23 percent above average), individual income (19 percent above average), and residential property (25 percent above average).

Nevada's tax effort, however, was 36 percent below the national average rate, ranking the state lowest in the nation. Nevada has no individual income or corporate income taxes, and in 1983 lost $250 million and $46 million in potential collections as a result. The state taxed general sales at a rate 42 percent below average, which resulted in a loss of $265 million. Surprisingly, selective sales were taxed at rates 110 percent above average, for additional revenues of $193 million. Because of this combination of high capacity and low effort, collected tax revenues of $1,102 per capita were 6 percent below average, ranking Nevada 24th in the nation in tax funds available to support public services.

Nevada allocated 8 percent of its tax revenues to higher education, below the 10 percent national rate. The combination of low revenues and a low allocation rate resulted in per capita appropriations of $85 for institutional support and other support, 24 percent below the national average.

If the total operating budget of Nevada (including nontax and federal revenues) is considered, highways, public services, and health and hospitals received a larger share of the budget than average, while elementary/secondary and higher education and public welfare received a proportionately smaller share. Between 1980 and 1984, higher education's share of the budget dropped from 7.6 percent to 6.4 percent.

Higher Education Enrollments

Nevada's six public colleges and universities enrolled 23,010 FTE students in fall 1983. University enrollment, as a share of the public total, was proportionately slightly larger than the national level (32.2 versus 30.3 percent), comprehensive college enrollment was also larger (32.7 versus 25.9 percent), and two-year college enrollment was smaller (35.1 versus 38.1 percent). There are no independent institutions in the state reported in this study.

Nevada had a smaller number of high school graduates per 1,000 population than the national average.

Institutional Finances and Characteristics

The University of Nevada--Reno enrolls approximately one-third of the state's students. Appropriations of $4,563 per student to the Reno campus in 1984 were equal to the national average for universities with medical programs. However, the university received very low tuition revenues (34 percent below average), which lowered total educational and general revenues per student to 8 percent below the U.S. average. As a result, instructional expenditures of $3,217 per student were 13 percent below average.

At the University of Nevada--Las Vegas (7,522 students), appropriations of $2,938 per student were 11 percent below the U.S. average. However, substantial gifts and grants and revenues from other sources increased total educational and general revenues to 14 percent above the national average for comprehensive institutions. Although instructional expenditures per student were relatively low, all other functions were financed at above the average national rate.

The state's four two-year academic colleges received appropriations that were 31 percent below average for this type of institution (ranking last). Combined with low tuition revenues, the institutions received total educational and general revenues per student that were 28 percent below average. As a result, instructional expenditures and faculty salaries were both below average.

Despite Nevada's low funding, overall faculty salaries were 6 percent above the national average in 1983. Between 1979 and 1983, salaries increased overall by 39 percent, with the largest gain (43 percent) at the two-year academic institutions.

NEW HAMPSHIRE

Recent Trends

Between 1980 and 1984, New Hampshire increased its appropriations for public higher education by 20.9 percent, way below the national average of 34.6 percent. With an enrollment growth of 6.7 percent and an inflation rate of 36.6 percent (HEPI), appropriations per student in constant dollars declined 17.1 percent. New Hampshire increased tuition revenues at only one-quarter of the national average. Thus, total educational and general revenues per student in constant dollars declined by 4.6 percent.

Enrollment at the 14 independent institutions in the state increased 26.6 percent between 1980 and 1984, the sixth-largest increase in the nation. These institutions were not able to increase tuition and revenues from other sources to offset both the enrollment growth and inflation, and total educational and general revenues per student in constant dollars declined by 3.6 percent.

State Financing of Higher Education

New Hampshire operates a small public higher education system and enrolled 22.2 FTE students per 1,000 population in 1984, compared to the national average of 29.1 FTE students per 1,000 population. Appropriations for higher education were proportionately even smaller, $45 per capita, below the national average of $113. Thus, appropriations per student of $1,887 were 49 percent below the national average, ranking the state last in the nation. To offset low appropriations, New Hampshire made extensive use of tuition revenues. By charging more than twice the national average rates, the state achieved nearly average total funding per student.

The state appropriated $.40 per capita for student financial aid, compared to the national average of $7.00, and $213,000 for state boards and commissions. Independent institutions in New Hampshire received a small amount of state government support.

State Tax Base and Budget

New Hampshire has slightly more tax wealth than average and had a potential tax capacity of $1,265 per capita in 1983 (15th in the nation), 8 percent above the national average of $1,176. (In 1981, the state ranked 28th, with a capacity 4 percent below average.) The state had above-average capacity in general and selective sales, licenses, and property and below-average tax potential in corporate income.

New Hampshire's tax effort was 31 percent below national average rates, with a state rank of 49th. The state has no general sales tax, with a resulting loss in 1983 of $320 million in potential revenue. The low tax rate for individual income resulted in an additional loss of $221 million. These losses were partially offset by the additional $180 million collected in property taxes because of above-average rates.

Due to average tax capacity and low tax effort, the state's collected tax revenues of $873 per capita were 26 percent below the national average, ranking New Hampshire 44th in the nation in tax funds available to support public services.

New Hampshire allocated only 5 percent of its tax revenues to higher education, one-half the national average. Because of low tax revenues and a low allocation rate, appropriations of $45 per capita for institutional support, student aid, and other support were 60 percent below the national average.

If the total operating budget of New Hampshire (including nontax and federal revenues) is considered, highways received a larger share of the budget than national average allocations, and health and hospitals received a proportionately smaller share. Higher education received an almost average share, although its share of the budget declined between 1980 and 1984, falling from 9.7 percent to 8.6 percent.

Higher Education Enrollments

The 22 colleges and universities in New Hampshire enrolled 39,350 FTE students in fall 1983. The public system, consisting of 11 institutions, enrolled 21,157 (54 percent) of the students, making it a small public system. University enrollment, as a share of the public total, was proportionately much larger than the national mix (49.8 versus 30.3 percent), as was baccalaureate enrollment (28.9 versus 4.0 percent); two-year college enrollment was much smaller (21.2 versus 38.1 percent). The 11 independent institutions in the state enrolled 18,193 FTE students in fall 1983.

In 1983, New Hampshire had a larger number of high school graduates per 1,000 population than the U.S. average.

Institutional Finances and Characteristics

State appropriations in New Hampshire were substantially below average for all types of institutions in the public sector except the two-year academic colleges, which received appropriations 9 percent above average. With high tuition revenues per student (81 percent above average) and other E&G revenues (70 percent above average), the two-year academic institutions operated with total educational and general revenues at 26 percent above the national average. Hardest hit were the two baccalaureate institutions, which had appropriations per student that were 50 percent below the national average (ranking last among 38 states). The nonmedical university (University of New Hampshire), enrolling half of the public students, received appropriations 44 percent below average. Tuition at all public institutions was well above average. At the nonmedical university, tuition revenues were twice the national average, highest in the nation. The university was also very successful in securing funding from private gifts and grants and other sources. As a result, total educational and general revenues per student were 5 percent above average. This is a remarkable demonstration of funding higher education through institutional initiative and private means. The nonmedical university emphasizes research and public service and had substantially above-average funding in both areas. Expenditures for instruction, on the other hand, were 18 percent below average. The same pattern of emphasis also prevails at the baccalaureate and two-year academic colleges.

In the independent sector, Dartmouth College remained one of the better-funded medical universities in the country. Its total educational and general revenues per student were nearly twice the national average. The four baccalaureate colleges received funding 11 percent below the national average. The two two-year occupational colleges and the two professional colleges were underfunded by 46 and 29 percent, respectively, compared to national averages.

In 1983 faculty salaries in New Hampshire's public institutions were 15 percent below the national average, and at the average in the independent sector. Salary increases between 1979 and 1983 were 20 percent below average for the public colleges and universities.

Additional State and Local Government Funding for Higher Education Current Operations

The amounts shown below are included in the "State and Local Government Support of Higher Education" section on the first data page for your state. (The dollar amounts shown on the first data page are shown in per capita terms.)

Student Aid	$	335,110
Postsecondary vocational-technical education	$	6,936,000
State boards and commissions	$	313,000
Centralized retirement or fringe benefits	$	
Interstate contracts and reciprocity payments	$	
Service functions provided centrally (e.g., computer service, library, telephone, etc.)	$	
Centrally administered capital/debt service	$	
Other	$	

Clarification of Institutional Financial Reporting

These funds are noted here to clarify differences in practices among the states that affect the comparability of these data.

Capital Outlays	$
Debt Service	$

NEW JERSEY

Recent Trends

New Jersey increased appropriations to public institutions 39.5 percent from 1980 to 1984. However, this was more than offset by enrollment growth of 4.8 percent and inflation of 36.6 percent (HEPI). As a result, appropriations per student in constant dollars fell 2.6 percent, with some loss in purchasing power in fiscal years 1982 and 1983. Tuition revenues at public institutions surpassed inflation, resulting in a 13.8 percent gain per student in constant dollars. Thus, New Jersey's total educational and general revenues per student in constant dollars increased 3.1 percent, ranking New Jersey 13th in the nation in this regard. Nationally, there was a 2.9 percent decline in total E&G revenues per student.

Enrollment in the independent institutions in the state declined 11.6 percent from 1980 to 1984, substantially below the 4.5 percent national increase. Tuition revenues more than matched inflation, creating a 21.3 percent gain in constant dollars per student, fifth-highest gain in the nation. Revenues from other sources also improved in real amounts, leading to a 19.9 percent increase in total E&G revenues per student in constant dollars.

State Financing of Higher Education

New Jersey operates a very small public higher education system relative to its population. Total appropriations per capita of $91 for higher education were correspondingly low. Consequently, appropriations per student of $3,627 were 2 percent below the national average, ranking the state 27th. Tuition revenues were high but revenues from other sources were low, so the level of total funding equaled the national average.

New Jersey appropriated $7.50 per capita ($55.4 million) for student financial aid (ranking 7th), which was 7 percent more than the national average. The state also provided $113 million for retirement and fringe benefits and $4.7 million for state boards and commissions. Independent institutions in New Jersey received $2.50 per capita in state government support.

State Tax Base and Budget

New Jersey has above-average tax potential and had a tax capacity of $1,319 per capita in 1983 (12th in the nation), 12 percent above the national average of $1,176. The capacity was the result of above-average tax potential for general sales, selective sales, individual and corporate income, and residential and commercial property.

New Jersey's tax effort was 9 percent above national average rates, a state rank of 10th. The state collected $1.5 billion more in property taxes because of above-average rates, $490 million more in selective sales taxes, and $135 million more in licenses. These additional collections were offset by $582 million in potential revenue lost because of lower tax rates than average for general sales, and $847 million lost because of below-average individual income taxes. As a result of the state's above-average capacity and effort, collected tax revenues of $1,438 per capita were 22 percent above average, ranking New Jersey 6th in the nation in tax funds available to support public services.

New Jersey allocated 6 percent of its tax revenues to higher education, substantially below the 10 percent national rate. As a result of above-average tax revenues and a below-average allocation rate, appropriations of $91 per capita for institutional support, student aid, and other support were below the national average.

If the total operating and capital budget of New Jersey (including nontax and federal revenues) is considered, elementary/secondary education, public services, and other received a larger share of the budget relative to national average allocations; higher education, health and hospitals, and highways received a proportionately smaller share.

Higher Education Enrollments

The 53 colleges and universities in New Jersey enrolled 213,228 FTE students in fall 1983. The public system, consisting of 30 institutions, enrolled 166,986 (78 percent) of the students. University enrollment, as a share of the public total, was proportionately smaller than nationally (15.9 versus 30.3 percent), four-year college enrollment was larger (38.1 versus 29.9 percent), and two-year college enrollment was slightly larger (41.8 versus 38.1 percent). The 23 independent institutions in the state enrolled 46,242 FTE students in fall 1983.

In FY83, New Jersey had a larger number of high school graduates per 1,000 population than the national average.

Institutional Finances and Characteristics

State and local appropriations were rather unevenly distributed among New Jersey's public institutions. Rutgers University--New Brunswick, a research university without medical, received appropriations per student at the national average. The state's comprehensive colleges received appropriations 5 percent below the national average. The two-year academic colleges received state funds 19 percent below average, and the two-year occupational colleges received appropriations 29 percent below average (ranked 36th out of 45 states). State funding for the health-professional college was substantially above average.

Tuition revenues at all public institutions were above average, particularly at the two-year academic schools and the health-professional college, thereby helping to offset low appropriations. However, the general baccalaureate and the two-year occupational colleges operated with total educational and general revenues about 15 percent below average. Instructional expenditures per student at the various public institutions generally reflected the relative level of state appropriations. Low appropriations for the two-year occupational colleges resulted in instructional expenditures 29 percent less than the national average for instruction.

Princeton University, one of the country's six independent research universities without medical programs, was funded at 7 percent above the average for this exclusive group of institutions. The independent comprehensive colleges, with enrollments totaling 17,240 students, had nearly average total funding.

Faculty salaries in New Jersey were above average in both the public and independent sectors. In the public institutions, salaries at all categories of institutions exceeded the national average in 1983, except the two-year academic colleges which were only 2 percent below average. Between 1979 and 1983 both sectors increased salaries at a level 7 to 8 percent above average.

Data Notes

1983-84

Additional State and Local Government Funding for Higher Education Current Operations

The amounts shown below are included in the "State and Local Government Support of Higher Education" section on the first data page for your state. (The dollar amounts shown on the first data page are shown in per capita terms.)

Student Aid	$ 55,440,000
Postsecondary vocational-technical education	$
State boards and commissions	$ 4,689,111
Centralized retirement or fringe benefits	$113,446,000
Interstate contracts and reciprocity payments	$
Service functions provided centrally (e.g., computer service, library, telephone, etc.)	$ 100,000
Centrally administered capital/debt service	$
Other	$

Clarification of Institutional Financial Reporting

These funds are noted here to clarify differences in practices among the states that affect the comparability of these data.

Capital Outlays	$ 7,380,220
Debt Service	$ 40,552,400

NEW MEXICO

Recent Trends

State funding for public higher education in New Mexico rose 2.5 percent in fiscal year 1984. However, enrollment growth of 2.3 percent and an inflation rate of 5.4 percent (HEPI) caused a 4.7 percent decline in appropriations per student in constant dollars. Tuition revenues also declined by 2.7 percent in real-dollar value, resulting in an overall 5.5 percent decline in total educational and general revenues per student in constant dollars. Only the two-year occupational institutions did not share in the losses.

The value of state funding dropped substantially in New Mexico between 1980 and 1984. Although state appropriations of $170 million to public institutions in 1984 represented a 41.1 percent increase over 1980 levels, enrollments also grew at rates higher than the national rate, expanding by 12.9 percent. As a result, state funding per student, adjusted for inflation, shrank by 8.5 percent from four years earlier. Tuition revenues, after adjustment for inflation, also declined in the public sector (by 9.6 percent). These losses meant that the real-dollar base of revenues was reduced by 10.8 percent per student.

Enrollment declined 22.7 percent from 1980 to 1984 at the three independent institutions in New Mexico, the largest decrease in the nation. Tuition revenues increased 39 percent and, when adjusted for 36.6 percent (HEPI) inflation, showed a 33.7 percent increase in constant dollars per student, the highest increase in the nation. Total educational and general revenues per student in constant dollars increased 8.7 percent.

State Financing of Higher Education

New Mexico operates a larger than average public system relative to its population and in FY84 enrolled 32.5 students per 1,000 population compared to the national average of 29.1 per 1,000 population.

Total per capita appropriations for higher education of $145. were 29 percent higher than the national average. Appropriations per student of $3,765 were 2 percent above the national average, ranking the state 20th. Revenues from other sources resulted in public institutional total funding per student at 3 percent above average.

New Mexico appropriated $3.90 per capita for student financial aid, whereas the U.S. average was $7.00 per capita. Independent institutions in New Mexico received no state support.

State Tax Base and Budget

New Mexico had a tax capacity of $1,268 per capita in 1983, 14th in the nation and 8 percent above average. This wealth is due principally to an extremely high severance tax potential, almost seven times the national average.

New Mexico's tax effort, however, was 21 percent below national average rates, with a state rank of 47th. (In 1981, New Mexico's tax effort was only 11 percent below average, with a state rank of 32nd.) When its rates are compared to national averages, the state lost $240 million in potential individual income taxes and $291 million in potential property taxes. This was counterbalanced by higher taxes than average on general sales, which produced an additional $170 million. Collected tax revenues in 1983 of $1,002 per capita were 15 percent below average, ranking New Mexico 34th in the nation in tax funds available to support public services.

New Mexico allocated 15 percent of its tax revenues to higher education, considerably above the national average of 10 percent. This allocation rate provided appropriations of $145 per capita for institutional support.

According to Census Bureau figures, higher education received 11.7 percent of the total state budget in 1984, a similar share to that received in 1980 and 23 percent above average. Elementary/secondary education received an average budget share. Public welfare was a low priority, and at 6.9 percent of the budget, received almost half of the average share.

Higher Education Enrollments

The 17 colleges and universities in New Mexico enrolled 46,012 FTE students in fall 1983. The public system, consisting of 15 institutions, enrolled 45,211 (98 percent) of the students. University enrollment, as a share of the public total, was proportionately much larger than the national mix (65.2 versus 30.3 percent), comprehensive institution enrollment was smaller (19.5 versus 25.9 percent), and two-year college enrollment was much smaller (14.7 versus 38.1 percent). The two independent institutions in the state enrolled 801 FTE students in fall 1983.

In 1983, New Mexico had 6 percent more than the national average number of high school graduates per 1,000 population.

Institutional Finances and Characteristics

The manner in which New Mexico distributed appropriations to its major public institutions in 1984 is unusual. The four comprehensive colleges, enrolling 8,819 students, received appropriations per student 27 percent greater than the national average. New Mexico State University, a research university without medical programs, received appropriations 12 percent below the national average. The University of New Mexico, a university with medical programs, received appropriations 27 percent below average. Tuition revenues at both universities were also very low. Although both universities had a high level of revenues from other sources, total educational and general revenues per student still lagged below the national average. New Mexico State University was 16 percent below average, and the University of New Mexico was 30 percent below average. In addition to high appropriations, the four comprehensive colleges received a high level of private gifts and grants, and government grants and contracts, both nearly four times the national average. Consequently, their total educational and general revenues per student were 16 percent above average.

The two-year academic colleges and occupational colleges in New Mexico received very favorable funding. State appropriations were 26 percent above average at the academic colleges and 57 percent above average at the occupational colleges. Private gifts and grants were also very high, and as a result these colleges secured total educational and general revenues per student that were 65 and 40 percent above the national average, respectively.

Expenditures for instruction per student at New Mexico State University and the University of New Mexico were 27 and 36 percent below average, respectively. This was a direct consequence of both low appropriations and low tuition.

New Mexico's two small independent baccalaureate colleges were funded at 10 percent below the national average. However, they received an above-average level of government contracts per faculty member.

Faculty salaries overall in the public sector equaled the national average in 1983; they were strongest at the medical university, where they were above average by 3 percent. Between 1979 and 1983 salaries increased at an average rate. In the independent general baccalaureate colleges, salaries were 20 percent below the national average.

Data Notes

1983-84

Additional State and Local Government Funding for Higher Education
Current Operations

Only state and local funds not reported by the institutions through the HEGIS institutional finance report are shown here. The amounts shown below are included in the "State and Local Government Support of Higher Education" section on the first data page for your state. (The dollar amounts shown on the first data page are shown in per capita terms.)

Student Aid	$ 5,343,337
Postsecondary vocational-technical education	$
State boards and commissions	$ 702,502
Centralized retirement or fringe benefits	$
Interstate contracts and reciprocity payments	$
Service functions provided centrally (e.g., computer service, library, telephone, etc.)	$
Centrally administered capital/debt service	$
Other	$

Clarification of Institutional Financial Reporting

These funds are noted here to clarify differences in practices among the states that affect the comparability of these data.

Capital Outlays	$ Not available
Debt Service	$ Not available
Sources:	
- state appropriations centrally allocated	$ 5,000,000*
- state and local appropriations to institutions	$ 34,100,000
- tuition and fees	$
- auxiliary enterprises	$
- other	$

Tuition and Fees reappropriated by the state? No

Other Comments

* Excludes $5.0 million for two-year colleges for ongoing buildings and campus, maintenance and repair.

(Indexes shown in bold are based on U.S. average = 100)

NEW YORK

Recent Trends

New York experienced small real-dollar improvements in funding for higher education in FY1984. The 11.5 percent increase in state support was sufficient to accommodate inflation and enrollment gains, and the net result was a 5.0 percent improvement in the purchasing power of its state institutions. New York ranked 34th in the nation in real-dollar funding gains. Improvements in overall funding were evident in seven of the nine sectors. Funding for the medical research university dropped 2.7 percent per student in constant dollars in FY84. This followed a 20.8 percent increase in FY83.

The profile for the state between 1980 and 1984 shows a funding decline of 3.3 percent overall in constant dollars per student. This is primarily due to the decline in state support by 4.6 percent per student in real dollars. During this same period tuition revenues increased 1.8 percent per student. By category of institution, the profile is quite mixed. Total funding for the nonmedical universities declined 10.6 percent, the two-year academic colleges by 6.6 percent, and the health-professional institution declined by 7.8 percent. Gains in the other categories ranged from .3 to 11.5 percent.

By contrast, total E&G per student funding for the independent institutions increased 9.6 percent in real dollars between 1980 and 1984. All categories of institutions experienced gains from between 6.2 and 22.5 percent except for the two-year colleges where funding dropped from 10 to 20 percent per student.

State Financing of Higher Education

In 1984, total appropriations per capita of $123.20 were 10 percent above the national average. Moreover, New York provided more financial support to the independent sector ($15 per capita--almost four times the national average) than any other state. In total, 12 percent of the state's higher education budget was channeled to the private sector. The national average was 3 percent. New York also provided more student aid ($22.50 per capita) than any other state.

New York enrolled more students in independent institutions than any other state. Because of the substantial allocations to private higher education and the emphasis on student aid in the public sector, direct institutional appropriations to the public sector were below average. In 1984, the state appropriated 84 percent of its higher education budget to public institutions, 11 percent below average.

State Tax Base and Budget

New York had 5 percent less taxable wealth than the typical state, ranking it 29th in tax capacity. However, by levying the second-highest tax rate in the nation (63 percent above average), the state overcame its below-average wealth and raised more tax revenues than any other state except Alaska, Wyoming, and the District of Columbia. New York had above-average tax capacity in four of the ten tax categories--individual income, corporate income, commercial property, and death and gift transfers. The state made a below-average tax effort in three relatively minor categories, death and gift taxes, licenses, and severance, and the capacity of the latter was inherently low anyway. New York ranked 2nd in effort in collecting in corporate income tax rates (index 190) and in overall property tax (index 182), and it was 4th in tax rates for individual income. The state also levied substantial taxes on general and selective sales (indexes 140 and 109 respectively).

The net effect of these tax rates was that the state collected $1,832 per capita in tax revenues, exceeding by $710 its tax capacity of $1,122. This massive tax program enabled the state to collect 56 percent more in revenues than average tax rates could yield.

Census data for 1984 show that New York's operating budget, including federal revenue-sharing funds, was 43 percent greater than average. However, only three functions received above-average shares of this large budget: public welfare, health and hospitals, and other. New York spent 17.8 percent of its budget on public welfare, 38 percent more than the national average. Higher education received one of the smallest shares of the budget (only 5.5 percent), 42 percent below the national average share.

Higher Education Enrollments

New York provided much less emphasis on university studies and significantly more emphasis on study at two-year institutions than average in the public sector. In addition, its comprehensive sector was larger than usual. The portion of students enrolled in universities was half the usual share, creating a relatively less expensive system of higher education to support. By contrast, the independent sector was more university and comprehensive oriented and was therefore a more costly mix.

Institutional Finances and Characteristics

State support in 1984 to public institutions in New York was 10 percent below average, and enrollment levels were even lower (17 percent below average). As a result, appropriations per student in New York were 22 percent above average, with all sectors funded at rates above average except for the health-professional institutions. Tuition revenues were also substantially higher than average, by 14 percent, thus creating a significant base of support for the public sector. In total, all public sectors except the public health-professional (index 75) and specialized institutions (index 103) were funded at levels substantially above average (ranging from 23 to 105 percent), despite the fact that government grants and contracts, private gifts, and other E&G funding were markedly below average (by 28 to 42 percent).

Independent institutions in New York were also generally well funded by national standards, largely as a consequence of substantial tuition revenues and strong endowment income. Unlike public institutions in New York, private institutions have been very successful in securing government grants and contracts. These schools received 43 percent more per faculty member than did average U.S. independents.

Faculty salary increases in New York's public and independent sectors kept pace with national trends from 1979 to 1983. Overall, salaries in the public sector in New York were 9 percent above average, while those at independent institutions were 10 percent above average for that category.

Data Notes

1983-84

Additional State and Local Government Funding for Higher Education Current Operations

The amounts shown below are included in the "State and Local Government Support of Higher Education" section on the first data page for your state. (The dollar amounts shown on the first data page are shown in per capita terms.)

Student Aid	$[illegible]7,400,000
Postsecondary vocational-technical education	$
State boards and commissions	$ 29,400,000
Centralized retirement or fringe benefits	$
Interstate contracts and reciprocity payments	$
Service functions provided centrally (e.g., computer service, library, telephone, etc.)	$
Centrally administered capital/debt service	$
Other	$

Clarification of Institutional Financial Reporting

These funds are noted here to clarify differences in practices among the states that affect the comparability of these data.

Capital Outlays	$ 37,100,000
Debt Service	$317,600,000
Sources:	
- state appropriations centrally allocated	$
- state and local appropriations to institutions	$
- tuition and fees	$
- auxiliary enterprises	$
- other	$

Tuition and Fees reappropriated by the state? Yes

Other Comments

The New York State Education Department reports that institutional funds displayed for both sectors account for only 79.8 percent of New York state and local appropriations; further, these funds appear to include state funds for debt service for some public institutions, but not for others.

NCHEMS classification of institutions is not comparable to that used in New York. Therefore, the New York State Education Department was not able to certify the accuracy or comparability of the data.

(Indexes shown in bold are based on U.S. average = 100)

NORTH CAROLINA

Recent Trends

State appropriations to North Carolina's public institutions increased 50.9 percent from 1980 to 1984, the ninth-highest increase in the nation. However, the state also experienced an 11.3 percent growth in enrollments, a very high rate compared to the national average of 7.3 percent. When inflation of 36.6 percent (HEPI) is also taken into account, appropriations in constant dollars per student fell .8 percent during the four-year period. Tuition revenues increased by 3.0 percent per student in constant dollars. As a result, the gain in total educational and general revenues per student in constant dollars was 2 percent between 1980 and 1984. Substantial increases in appropriations and tuition per student in constant dollars in FY84 accounted for most of the increase in the four-year period.

Tuition revenues at the state's 41 independent institutions barely kept pace with inflation from 1980 to 1984, increasing only .9 percent per student in constant dollars. Revenues from other sources, however, increased sufficiently so that total educational and general revenues per student in constant dollars increased 1.4 percent. Only the medical research university and two-year occupational colleges suffered losses in total funding, declining 12.0 and 10.3 percent, respectively.

State Financing of Higher Education

Per capita appropriations for higher education of $153 were 36 percent above average. As a result, appropriations were $4,308 per student, 17 percent above average and ranking the state 9th in the nation. Low tuition revenues reduced total institutional funding per student to 6 percent above average.

State Tax Base and Budget

North Carolina's low tax potential of $1,020 per capita, 41st in the nation, was 13 percent below the national average of $1,176. This condition was the result of below-average tax capacity for general sales, individual income, and residential, commercial, and farm property.

The state's tax effort in 1983 was 12 percent below the national average, ranking it 34th. (Two years earlier, North Carolina's tax effort was 5 percent below average, ranking it 23rd.) By taxing individual income 42 percent above the national average, North Carolina secured an additional $459 million. However, by taxing property at a rate 39 percent below the national average, the state lost $823 million in potential revenues. Lower tax rates for general sales resulted in a $467 million loss. This low tax capacity and below-average effort produced tax revenues of $896 per capita, 24 percent below the national average, and placed North Carolina 42nd in the nation in tax funds available to support public services.

North Carolina allocated an exceptionally high 17 percent of its tax revenues to higher education, well above the national rate of 10 percent. This high allocation rate produced appropriations of $153 per capita for institutional support and student aid, 36 percent above the national average.

If the total operating budget of North Carolina (including nontax and federal transfers) is considered, higher education, elementary/secondary education, and health and hospitals received a larger share of the budget relative to national average allocations. Highways, public welfare, and public services received a proportionately smaller share. Moreover, higher education improved its budget share between 1980 and 1984 from 13.2 to 14.3 percent.

Higher Education Enrollments

The 114 colleges and universities in North Carolina enrolled 238,664 FTE students in fall 1983. The public system, consisting of 73 institutions, enrolled 187,354 (79 percent) of the students. University enrollment, as a share of the public total, was proportionately smaller than the national mix (25.4 versus 30.3 percent); four-year college enrollment was larger (32.7 versus 29.9 percent); and two-year college enrollment also was larger (41.8 versus 38.1 percent). The 41 independent institutions in the state enrolled 51,310 FTE students in fall 1983.

In FY83, North Carolina had a lower number of high school graduates per 1,000 population than the national average.

Institutional Finances and Characteristics

North Carolina's appropriations were above average for its public institutions with the exception of the nonmedical university (University of North Carolina--Greensboro), which received almost average funding from the state. The medical research university (University of North Carolina--Chapel Hill) received appropriations 32 percent above the national average (ranking 4th among 27 states); the nonmedical research university (North Carolina State University--Raleigh) received funds 44 percent above average (ranking 3rd among 17 states). However, tuition revenues were substantially below average at all public institutions. Nevertheless, public institutions in the state generally received above-average total educational and general revenues (excluding government contracts) per student. The exceptions were the University of North Carolina--Greensboro and the state's 48 two-year occupational colleges, which were funded at 17 percent and 4 percent below average, respectively.

Instructional expenditures per student were average and above for all public institutions, particularly the University of North Carolina--Chapel Hill, where the level was 58 percent above average.

The state's 41 independent institutions were generally well funded, with one notable exception--Duke University. Duke received relatively low tuition revenues, perhaps resulting from an effort to remain competitive with the state's public sector. As a result, Duke's total educational and general revenues (excluding government contracts) per student were 38 percent below average. We should point out, however, that Duke is classified as an independent research university with medical programs, a very exclusive category that includes only 18 institutions in the country. Duke's instructional expenditures per student and academic support per faculty member were about 25 to 35 percent below average.

Despite the above-average funding in North Carolina's public institutions, faculty salaries were below average by 11 percent. Salaries varied by sector and were lowest at the two-year colleges. Between 1979 and 1983, faculty salaries increased 33 percent, below the national average. Salaries in the independent sector were also below average by 23 percent.

Data Notes

1983-84

Additional State and Local Government Funding for Higher Education
Current Operations

The amounts shown below are included in the "State and Local Government Support of Higher Education" section on the first data page for your state. (The dollar amounts shown on the first data page are shown in per capita terms.)

Student Aid	$ 34,521,581
Postsecondary vocational-technical education	$239,547,436
State boards and commissions	$ 9,356,153
Centralized retirement or fringe benefits	$
Interstate contracts and reciprocity payments	$
Service functions provided centrally (e.g., computer service, library, telephone, etc.)	$ 1,527,974
Centrally administered capital/debt service	$
Other	$ 389,773*

Clarification of Institutional Financial Reporting

These funds are noted here to clarify differences in practices among the states that affect the comparability of these data.

Capital Outlays	$——
Debt Service	$
Sources:	
- state appropriations centrally allocated	$
- state and local appropriations to institutions	$
- tuition and fees	$
- auxiliary enterprises	$
- other	$

Tuition and Fees reappropriated by the state? Yes**

Other Comments

* Expenditures for centralized curriculum development.

** In FY84, $100.0 million of the expenditures were for appropriated tuition and fees.

Davidson County Community Colleges (two-year occupational) was eliminated from this study.

NORTH DAKOTA

Recent Trends

Between 1980 and 1984, North Dakota increased its appropriations for public higher education by 45.4 percent. However, this was not enough to compensate for a 12.5 percent enrollment growth and a 36.6 percent (HEPI) inflation rate, so the state registered a 5.4 percent decline in appropriations per student in constant dollars. This decline was offset by a substantial increase in tuition revenues, doubling during the four years, which increased tuition revenues per student by 31.5 percent. As a result, total educational and general revenues per student in constant dollars increased 3.1 percent.

The two independent institutions in the state experienced massive enrollment growth of 49.3 percent between 1980 and 1984, the second-largest increase in the nation. Between 1980 and 1984 the general baccalaureate institutions increased tuition and revenues from other sources to offset inflation, and total E&G revenues per student in constant dollars grew 16.3 percent.

State Financing of Higher Education

Relative to population, North Dakota operated a large public higher education system, 48 percent above the national average. Thus, while total appropriations of $169 per capita for higher education were very high, 50 percent above average, state appropriations of $3,527 per student were 5 percent below the national average, ranking the state 28th. High revenues from private gifts and grants and other sources raised total institutional revenues per student to 4 percent above average.

North Dakota appropriated $1.2 million for interstate contracts and reciprocity payments, $549,000 for state boards and commissions, and $510,000 for student aid.

State Tax Base and Budget

In 1983 North Dakota ranked 13th in the nation in its capacity to raise taxes, 16 percent above average. This potential was due to above-average severance-tax potential, five times the national average. North Dakota also had above-average tax potential for general sales, selective sales, licenses, and farm property.

North Dakota's tax effort was 19 percent below the national average, with a state rank of 44th. The state undertaxed general sales, creating a loss of potential revenue of $48 million, individual income, creating a potential loss of $99 million, and property, creating a potential loss of $46 million. The low effort offset high capacity and resulted in collected tax revenues of $1,058 per capita, 10 percent below average. This placed North Dakota 29th in the nation in tax funds available to support public services.

North Dakota allocated 16 percent of its tax revenues to higher education, third-highest share in the country and well above the national average rate of 10 percent. As a result, per capita appropriations of $169 for institutional support, student aid, and other support were 50 percent above the national average, ranking North Dakota 5th in the nation.

If the total operating budget of North Dakota (including nontax and federal transfers) is considered, higher education, highways, and other sources received a larger share of the budget relative to the national average. Public welfare, health and hospitals, and public services received a proportionately smaller share. Higher education's share of the budget increased between 1980 and 1984 from 12.3 percent to 13.4 percent.

Higher Education Enrollments

The 13 colleges and universities in North Dakota enrolled 30,903 FTE students in fall 1983. The public system, consisting of 11 institutions, enrolled 30,164 (98 percent) students. University enrollment, as a share of the public total, was near the national level (32.1 versus 30.3 percent). Four-year college enrollment was much larger (47.0 versus 29.9 percent), and two-year college enrollment was much smaller (21.0 versus 38.1 percent). The two independent institutions in the state enrolled 739 FTE students in fall 1983.

In 1983, North Dakota had 20 percent more high school graduates per 1,000 population than the national average.

Institutional Finances and Characteristics

North Dakota State University appears to be the most favored of the state's public institutions in terms of financial support. Enrolling 8,735 students, it received appropriations per student 23 percent above average for comprehensive institutions. On the other hand, the University of North Dakota, enrolling 9,679 students, received appropriations 12 percent below average for universities with medical programs. The medical university received below-average tuition revenues but above-average revenues from gifts, grants, and other sources. As a result, total educational and general revenues per student were only 8 percent below average. The comprehensive institution received above-average tuition and revenues from all other sources, thus obtaining total educational and general revenues per student 44 percent above average. Yet, in an unusual turnabout, North Dakota State University, which emphasizes research and public service, spent 16 percent less than average for instruction, whereas the University of North Dakota spent 10 percent more

The state's four baccalaureate colleges and two two-year occupational schools received appropriations slightly above average. The three two-year academic colleges were funded at 16 percent below average per student.

The state's public institutions generally received average tuition revenues. This was not the case at the state's academic two-year institutions. Their tuition revenues were 57 percent above average, evidently to counterbalance their low share of state support.

The independent comprehensive institution in the state was financed at an average level. The two-year academic college was underfinanced greatly.

Faculty salaries made considerable strides between 1979 and 1983, increasing by 17 percent in the public sector. Thus in 1983, salaries overall were only 8 percent lower than the national average.

Data Notes

1983-84

Additional State and Local Government Funding for Higher Education Current Operations

The amounts shown below are included in the "State and Local Government Support of Higher Education" section on the first data page for your state. (The dollar amounts shown on the first data page are shown in per capita terms.)

Student Aid	$ 510,000
Postsecondary vocational-technical education	$
State boards and commissions	$ 1,698,594
Centralized re* ent or fringe benefits	$
Interstate contracts and reciprocity payments	$ 1,150,000
Service functions provided centrally (e.g., computer service, library, telephone, etc.)	$
Centrally administered capital/debt service	$
Other	$

Clarification of Institutional Financial Reporting

These funds are noted here to clarify differences in practices among the states that affect the comparability of these data.

Capital Outlays	$
Debt Service	$
Sources:	
- state appropriations centrally allocated	$
- state and local appropriations to institutions	$
- tuition and fees	$
- auxiliary enterprises	$
- other	$

Tuition and Fees reappropriated by the state? Yes*

Other Comments

* Tuition only

OHIO

Recent Trends

State and local appropriations to public higher education increased 32.1 percent in Ohio between 1980 and 1984, slightly less than the U.S. average of 34.6 percent. During the same period, enrollment grew by 9.1 percent, significantly above the U.S. average of 7.3 percent. Thus, when inflation of 36.6 percent (HEPI) is taken into account, appropriations per student in constant dollars declined 11.4 percent, well below the national average decline of 8.2 percent and ranking the state 34th. Tuition revenues at public institutions did, however, keep pace with inflation, increasing 18.5 percent per student in constant dollars, but it was not sufficient to offset the decline in state funding and enrollment growth. As a result, total educational and general revenues per student in constant dollars fell 2.0 percent.

The independent sector in Ohio saw its overall spending power improve by 5.2 percent for the 1980 to 1984 period. These improvements were evident in all categories of independent schools.

State Financing of Higher Education

In FY84, total per capita appropriations of $83 for higher education were below the national average of $113. Consequently, appropriations of $3,010 per student were 19 percent below average, ranking Ohio 42nd in the nation. The state received tuition revenues that were 67 percent above average, and together with above-average revenues from other sources, total educational and general revenues per student were 3 percent above average.

Ohio appropriated $4.10 per capita for student financial aid compared to the national average of $7.00 per capita. Independent institutions in Ohio received $2.50 per capita in state government support.

State Tax Base and Budget

Ohio's tax capacity of $1,051 per capita in 1983 was 11 percent below the national average, ranking the state 34th. The state had a nearly average capacity for each of the major types of taxes.

Ohio's tax effort was 3 percent above the national average, with a state rank of 18th. (In 1981, Ohio's tax effort was 11 percent below average, with a state rank of 33rd.) The state taxed general sales at 16 percent below national average rates, thereby losing $430 million in potential revenue. Corporate income was also undertaxed, creating a potential loss of $247 million. This was offset, however, by higher taxes on selective sales, individual income, and total property taxes, which netted an additional $1 billion in revenues. As a result of the low capacity and high effort, collected tax revenues of $1,081 per capita were 8 percent below average, ranking Ohio 27th in the nation in tax funds available to support public services.

Ohio allocated 8 percent of its tax revenues to higher education, below the national average rate of 10 percent. Due to low allocations and low collected revenues, appropriations of $83 per capita for institutional support, student aid, and other support were below the national average.

If the total operating budget of Ohio (including nontax and federal revenues) is considered, elementary/secondary education, highways, and public welfare received a larger share of the budget relative to national average allocations. Health and hospitals, public services, and other functions received a proportionately smaller share. Higher education received an average share of the state budget.

Higher Education Enrollments

The 123 colleges and universities in Ohio enrolled 372,105 FTE students in fall 1983. The public system, consisting of 59 institutions, enrolled 290,170 (78 percent) of the students. University enrollment, as a share of the public total, was proportionately much larger than the national level (57.6 versus 30.3 percent). Four-year college enrollment was very much smaller in relative size (14.3 versus 29.9 percent), as was two-year college enrollment (28.1 versus 38.1 percent). The 64 independent institutions in the state enrolled 81,935 FTE students in fall 1983.

In FY83, Ohio had an above-average number of high school graduates per 1,000 population compared to the nation.

Institutional Finances and Characteristics

The state of Ohio consistently and uniformly underfunded its public institutions of higher education as judged by national averages. Ohio State University and the University of Cincinnati, research universities with medical programs, received appropriations per student 23 percent below average (ranked 22nd out of 27 states). Appropriations to the University of Ohio (university with medical program) and the universities without medical programs were 31 and 34 percent below average, respectively. The state's 14 two-year academic colleges were the best-supported institutions, receiving funding 5 percent below average. All of the public institutions attempted to make up for low appropriations with high tuition, but only three categories of institutions were successful. The state's comprehensive colleges received tuition revenues 65 percent higher than average (highest in the nation for this type of institution), plus substantial private gifts and grants. This brought their total educational and general revenues per student 12 percent above the national average. The state's general baccalaureate and two-year academic colleges also succeeded in exceeding the national average by receiving revenues from other sources.

Overall instructional expenditures per student were above average at the public institutions by 6 percent. Research expenditures per faculty member at the University of Cincinnati and Ohio State University were underfunded by 43 percent in comparison to national averages. However, public service was funded at 62 percent above average.

Ohio's 64 independent institutions generally charged less tuition than average and were underfinanced overall. The 30 general baccalaureate colleges were exceptions. They received tuition revenues 19 percent above average and had total educational and general revenues per student that were 12 percent above average.

Faculty salaries in the public institutions in Ohio in 1983 were close to or above the national average at all institutional types with the exception of the two-year occupational colleges and health-professional school. Salary increases between 1979 and 1983 were below average for those two types of institutions. Salary increases in the independent sector during the same time period were close to the national average.

Data Notes

1983-84

Additional State and Local Government Funding for Higher Education Current Operations

The amounts shown below are included in the "State and Local Government Support of Higher Education" section on the first data page for your state. (The dollar amounts shown on the first data page are shown in per capita terms.)

Student Aid	$ 44,203,000
Postsecondary vocational technical education	$
State boards and commissions	$ 1,940,000
Centralized retirement or fringe benefits	$
Interstate contracts and reciprocity payments	$
Service functions provided centrally (e.g., computer service, library, telephone, etc.)	$
Centrally administered capital/debt service	$
Other	$

Clarification of Institutional Financial Reporting

These funds are noted here to clarify differences in practices among the states that affect the comparability of these data.

Capital Outlays	$
Debt Service	$
Sources:	
- state appropriations centrally allocated	$105,361,000
- state and local appropriations to institutions	$
- tuition and fees	$
- auxiliary enterprises	$
- other	$

Tuition and Fees reappropriated by the state? No

Other Comments

The Ohio Board of Regents considers the Ohio State University branch campus (Lima, Mansfield, Marion, and Newark) as two-year academic colleges, and not as general baccalaureate college as reported in this study. Therefore, the numbers for these two categories may be skewed in one direction.

(Indexes shown in bold are based on U.S. average = 100)

OKLAHOMA

Recent Trends

For Oklahoma's system of public higher education, fiscal year 1984 was marked by a significant drop in constant-dollar per student funding. No other states fared worse than Oklahoma, where inflation-adjusted state and local state appropriations plummeted 15.1 percent. Tuition increases were slightly less than inflation but were not sufficient to counteract the loss in appropriations. Thus the purchasing power of total revenues per student dropped 12.2 percent. All types of public institutions shared in the loss.

The overall four-year profile (1980 to 1984) was similar, although not as severe. Oklahoma's public sector declined 2.4 percent in its overall revenue base.

Between 1980 and 1984, the 12 independent institutions in the state grew by only 3.2 percent, whereas the national average enrollment growth for private colleges was 4.5 percent. The private sector substantially increased tuition revenues, by 65 percent, resulting in a 17.2 percent gain per student in constant dollars. However, total educational and general revenues per student in constant dollars dropped .6 percent.

State Financing of Higher Education

Relative to its population, Oklahoma operated a larger than average public higher education system in 1984 and enrolled 33.1 FTE students per 1,000 population, compared to the national average of 29.1 students per 1,000 population.

Appropriations of $3,123 per student were 15 percent below average in 1984, ranking the state 38th. Institutions in the state received tuition revenues that were 51 percent below average, as well as low revenues from other sources. As a result, total revenues per student were 26 percent below average.

State Tax Base and Budget

Oklahoma is a potentially tax-rich state and in 1983 had a tax capacity of $1,351 per capita, 15 percent above the national average of $1,176. The state had above-average capacity in selective sales, licenses, and property. The state had a severance-tax potential 5.87 times the national average, with potential revenues of $645 million if national average tax rates had been applied.

Oklahoma's tax effort was 20 percent below the national average, one of the lowest in the nation, ranking the state 45th. When its rates are compared to national averages, the state lost $36 million in potential general sales taxes, $131 million in potential taxes on selective sales income, $73 million in potential individual income, $98 million in potential taxes on corporate income, and $728 million in potential taxes on property. This unusual combination of very high capacity and very low effort resulted in collected tax revenues of $1,085 per capita, 8 percent below the national average, ranking Oklahoma 26th in the nation in tax funds available to support public services. This was still an improvement over 1980, when state tax revenues were 17 percent below the national average, ranking the state 35th.

If the total operating budget of Oklahoma (including nontax and federal transfers) is considered, higher education, elementary/secondary education, highways, and health and hospitals received a larger share of the budget relative to national average allocations; public welfare, public services, and other programs received a proportionately smaller share. Higher education decreased its share of the state budget between 1980 and 1984 from 12.4 to 11.4 percent.

Higher Education Enrollments

The 41 colleges and universities in Oklahoma enrolled 128,415 FTE students in fall 1983. The public system, consisting of 29 institutions, enrolled 111,157 (87 percent) of the students. University enrollment, as a share of the public total, was proportionately larger than nationally (36.6 versus 30.3 percent). Four-year college enrollment was smaller in relative size (26.7 versus 29.9 percent), as was two-year college enrollment (29.1 versus 38.1 percent). The 12 independent institutions in the state enrolled 17,258 FTE students in fall 1983.

In FY83, Oklahoma had an above-average number of high school graduates per 1,000 population compared to other states.

Institutional Finances and Characteristics

State appropriations in Oklahoma were overall below average by 15 percent. Only the two-year occupational school had appropriations close to the national average (98 percent). The medical research university received appropriations 33 percent below average--the third worst in the nation. Tuition revenues were also low at all public institutions in Oklahoma, 51 percent below average, ranking Oklahoma last in this regard. Lacking large compensatory revenues from other sources, Oklahoma's total educational and general revenues per student remained 26 percent below average, the lowest total funding per student in the country.

The 12 independent institutions in the state generally received low tuition revenues per student but compensated somewhat with large revenues from private gifts and grants and from endowment income. Total educational and general revenues per student of $7,257 were 17 percent below the national average. The comprehensive and two-year academic institutions operated with above-average total E&G revenues, by 19 percent and 15 percent respectively.

Between 1979 and 1983, faculty salaries in Oklahoma's public institutions made major strides forward, increasing 47 percent more than average, the largest increase in the nation. This increase brought overall salaries up to the national level. Salaries in independent institutions lagged behind the national average by 11 percent.

1983-84

Additional State and Local Government Funding for Higher Education
Current Operations

The amounts shown below are included in the "State and Local Government Support of Higher Education" section on the first data page for your state. (The dollar amounts shown on the first data page are shown in per capita terms.)

Student Aid	$
Postsecondary vocational technical education	$
State boards and commissions	$
Centralized retirement or fringe benefits	$
Interstate contracts and reciprocity payments	$
Service functions provided centrally (e.g computer service, library, telephone, etc.)	$
Centrally administered capital/debt service	$
Other	$

Clarification of Institutional Financial Reporting

These funds are noted here to clarify differences in practices among the states that affect the comparability of these data.

Capital Outlays	$
Debt Service appropriations to public institutions in the state Sources:	$
- state appropriations centrally allocated	$
- state and local appropriations to institutions	$
- tuition and fees	$
- auxiliary enterprises	$
- other	$

Tuition and Fees reappropriated by the ate?

Other Comments

(Indexes shown in bold are based on U.S. average = 100)

OREGON

Recent Trends

In fiscal year 1984, Oregon rebounded from the losses of the previous year in constant-dollar state funding and achieved a 12.9 percent increase, after accounting for inflation and enrollment shifts. Public institutions in Oregon failed to increase tuition revenues to offset inflation, resulting in a 4.9 percent reduction per student in constant dollars. This moderated the gain achieved through appropriations, but total E&G revenues per student in constant dollars still increased 7.0 percent, over twice the national average.

For 1980 to 1984, the profile was not so positive. Despite a 13.0 percent increase in constant-dollar tuition revenues, the 5.2 percent decline in adjusted state appropriations created a net decline in purchasing power of .8 percent. Four of the eight sectors experienced declines.

The Oregon Institute of Technology had the worst setback, with revenue losses in constant dollars per student of 15.6 percent, followed by the two-year occupational schools (with losses of 6.6 percent), the general baccalaureates (with losses of 5.0 percent), and the two-year academics (with losses of 4.8 percent). The nonmedical university operated with gains in total E&G funding of 9.1 percent per student in real dollars.

State Financing of Higher Education

In fiscal year 1984, Oregon spent $113 per capita for higher education, a rate similar to the national average. Most of these funds went directly to public institutions in the form of general institutional support, and a small amount went to the private institutions. The rest was allocated to interstate contracts and reciprocity payments, centralized library services, public broadcasting, and support of the state's coordinating commission.

State Tax Base and Budget

Oregon was slightly below average in its capacity to raise tax funds, ranking 28th among the states. Economic activity in four of the ten tax categories was above average, and Oregon was particularly strong in general sales taxes, licenses, and residential and farm property. Its rate of taxation was 4 percent above average. Its tax structure is unusual, with the state having the highest individual income taxes in the nation and no general sales taxes. Oregon's tax revenues were close to the national average (index 99).

Higher education received a large share of the state's budget, even though this share fell slightly (from 11.1 to 10.8 percent) between 1980 and 1984. By contrast, public welfare and health and hospitals were low priorities and received below-average shares of the state's budget. All other functions were funded at or above the average.

Higher Education Enrollments

Higher education in Oregon in 1984 was distinctly public in nature, with 88 percent of all students enrolled at public institutions. The private sector in the state was 46 percent smaller than average.

The two-year sector in 1984 in Oregon enrolled an unusually large proportion of public students, 46 percent. The comprehensive sector by contrast was much smaller than average. An average number of students enrolled at the graduate level.

Institutional Finances and Characteristics

Oregon provided average tax support per capita for higher education, and state appropriations per student were also at the U.S. average. Funding, however, varied by category of institution. The universities, comprehensive institutions, and Oregon Institute of Technology received state funds that were 12 to 26 percent below average. By contrast, the baccalaureate institution (Eastern Oregon State) and the academic/comprehensive two-year campuses were funded by the state at levels 27 and 49 percent above average, respectively. The large two-year occupational sector received 6 percent more from the state than average.

Tuition revenues were 12 percent above average overall, though revenues from other sources (except private sources and government grants and contracts) were below average. As a result, total revenues per student (excluding grants and contracts) were $5,707 in 1984, a level matching the U.S. average. However, revenue profiles of the different groups of institutions were very uneven. The academic/comprehensive two-year colleges were most successful in garnering resources, collecting 47 percent more funds per student than average. The baccalaureate schools, occupational two-year institutions, and the health-professional institution also functioned with above-average funding (by 22, 6, and 17 percent respectively). The nonmedical universities (University of Oregon and Portland State University) and the Oregon Institute of Technology were the least successful in obtaining revenues and so function with 15 and 25 percent, respectively, less funding than average for these categories. In addition, Oregon State (index 96) and the two comprehensive institutions (index 99) operated with below-average support.

Faculty salaries increased by only 24 percent between 1979 and 1983, which compared poorly with the 36 percent gain nationally. These losses put faculty salaries in Oregon's public system at a level 9 percent below the national average.

Additional State and Local Government Funding for Higher Education
Current Operations

The amounts shown below are included in the "State and Local Government Support of Higher Education" section on the first data page for your state. (The dollar amounts shown on the first data page are shown in per capita terms.)

Student Aid	$ 10,685,000
Postsecondary vocational technical education	$
State boards and commissions	$ 9,605,000
Centralized retirement or fringe benefits	$
Interstate contracts and reciprocity payments	$ 446,000
Service functions provided centrally (e.g., computer service, library, telephone, etc.)	$ 18,000
Centrally administered capital/debt service	$
Other	$

Clarification of Institutional Financial Reporting

These funds are noted here to clarify differences in practices among the states that affect the comparability of these data.

Capital Outlays	$ 35,993,000
Debt Service	$ 26,340,000

PENNSYLVANIA

Recent Trends

Pennsylvania increased appropriations to public higher education by only 26.1 percent between 1980 and 1984, below the 34.6 percent national average. With enrollment growth of 8.1 percent and inflation of 36.6 percent (HEPI), appropriations per student in constant dollars declined 14.6 percent, far more than the national average decline of 8.2 percent. Revenue from tuition and fees rose 60 percent during the four years, a constant-dollar increase of 8.8 percent. This improvement was not sufficient to offset the decline in appropriations. As a result, total educational and general revenues per student in constant dollars decreased 4.8 percent. All of the university sectors and professional sectors experienced gains in total E&G funding between 1980 and 1984.

The state's 95 independent institutions had a sizable enrollment growth of 7.5 percent from 1980 to 1984. They also increased tuition revenues by 65 percent, which resulted in a 12.8 percent gain per student in constant dollars. Consequently, total educational and general revenues per student increased 7.6 percent in constant dollars. Only the medical research university and two-year academic colleges experienced declines of 4.0 and 2.1 percent per student in constant dollars, respectively.

State Financing of Higher Education

Total appropriations for higher education were low, $77 per capita, 31 percent below average. Thus, appropriations of $2,871 per student were 22 percent below average, ranking Pennsylvania 47th. Because public institutions received tuition revenues that were almost twice the national average, total funding per student was 3 percent above the national average.

Pennsylvania appropriated $6.90 per capita for student aid ($82.3 million), which was equal to the U.S. average. Moreover, Pennsylvania appropriated a very high $4.30 per capita for direct support of independent institutions.

State Tax Base and Budget

Pennsylvania had a below-average tax capacity of $1,037 per capita in 1983, 22 percent less than the national average of $1,176. The state ranked 36th in this respect. Tax capacity for both general sales and selective sales was about 10 percent below the U.S. average.

Pennsylvania's tax effort was 5 percent above average, with a rank of 15th among the states. The state taxed selective sales at a rate 13 percent higher than the national average rate, resulting in additional revenues of $197 million. Higher taxes than average for licenses brought in an additional $438 million; individual income taxes, $627 million, corporate income, $99 million; and death and gift taxes, an extra $137 million. This was offset, however, by lower taxes on general sales and property than average, a combined loss of $802 million in potential revenue. As a result of low capacity and high effort, collected tax revenues of $1,087 per capita were 7 percent below the national average, ranking Pennsylvania 25th in the nation in tax funds available to support public services.

Pennsylvania allocated only 7 percent of its tax revenues to higher education, compared to the national average of 10 percent. As a result of this low allocation rate and nearly average revenues, appropriations of $77 per capita for institutional support, student aid, and other support were below average.

If the total operating budget of Pennsylvania (including nontax and federal transfers) is considered, elementary/secondary education and public welfare received a larger share of the budget relative to national average allocations. Higher education, health and hospitals, and public services received a proportionately smaller share. Higher education received about half as much of the state's budget as was typical in other states.

Higher Education Enrollments

The 156 colleges and universities in Pennsylvania enrolled 405,485 FTE students in fall 1983. The public system, consisting of 61 institutions, enrolled 237,659 (59 percent) of the students. University enrollment, as a share of the public total, was proportionately larger than the national mix (32.3 versus 30.1 percent), as was four-year college enrollment (33.7 versus 29.9 percent). However, two-year college enrollment was proportionately smaller (34.0 versus 38.1 percent). The 95 independent institutions in the state enrolled 167,826 FTE students in fall 1983.

In FY83, Pennsylvania had an above-average number of high school graduates per 1,000 population compared to the nation.

Institutional Finances and Characteristics

State appropriations for public higher education in Pennsylvania were below average for each type of institution except for the other professional and specialized (Pennsylvania State University--Radnor Center). The medical research university (University of Pittsburg) received appropriations per student that were 34 percent below average, appropriations to the nonmedical research university (Pennsylvania State University) were 29 percent below average, and appropriations to the medical university (Temple University) were 6 percent below average. In most instances the deficiency was more than made up for by high tuition revenues, averaging almost twice the national average. (Pennsylvania ranked 3rd in the nation in tuition revenues per student at public institutions.) Thus, all public institutions except the health-professional institution obtained total educational and general revenues per student that were close to or greater than the national average. Expenditures for instruction per student and academic support per faculty member were generally near or above average.

In the independent sector, the medical research university (University of Pennsylvania) received tuition revenues 3 percent above average but had a low level of private gifts and grants and other revenues. As a result, total educational and general revenues per student were 10 percent below average. As a research university without medical programs, Carnegie-Mellon University was substantially underfunded, by 21 percent. The 9 comprehensive colleges, enrolling 37,785 students, were funded at a level 14 percent below average, while the 48 baccalaureate colleges, enrolling 60,507 students, were funded slightly above the national average.

Faculty salaries in Pennsylvania in 1983 were above average in both the public and independent sectors. However, increases in recent years show that public institutions in the state have lost ground generally. In the public sector, faculty salaries grew 20 percent more slowly than average between 1979 and 1983, while in the independent sector the rate of salary increase was 5 percent above the national average.

Data Notes

1983-84

Additional State and Local Government Funding for Higher Education
Current Operations

The amounts shown below are included in the "State and Local Government Support of Higher Education" section on the first data page for your state. (The dollar amounts shown on the first data page are shown in per capita terms.)

Student Aid	$ 82,317,000
Postsecondary vocational technical education	$
State boards and commissions	$ 408,000*
Centralized retirement or fringe benefits	$ *
Interstate contracts and reciprocity payments	$
Service functions provided centrally (e.g., computer service, library, telephone, etc.)	$ *
Other	$ 261,000**

Clarification of Institutional Financial Reporting

These funds are noted here to clarify differences in practices among the states that affect the comparability of these data.

Capital Outlays	$ 32,654,039
Debt Service	$140,872,545
Sources:	
- state appropriations centrally allocated	$157,625,378
- state and local appropriations to institutions	$ 15,901,206
- tuition and fees	$ *
- auxiliary enterprises	$
- other	$

Tuition and Fees reappropriated by the state?

Other Comments

* Data are not available on the State System of Higher Education which operates the 14 state-owned universities.

RHODE ISLAND

Recent Trends

Between 1980 and 1984, appropriations to public higher education in Rhode Island increased by only 30.2 percent, compared to the national average of 34.6 percent. Thus, with enrollment growth of 2.2 percent and inflation of 36.6 percent (HEPI), appropriations per student in constant dollars declined 6.8 percent, slightly less than the average national loss of 8.2 percent. During this same period, institutions increased tuition revenues 13.0 percent per student in constant dollars. Still, total educational and general revenues per student in constant dollars decreased 1.4 percent. Constant-dollar declines were visible in state support in 1982 and 1984 and in total operating budgets in fiscal year 1982.

The seven independent institutions in Rhode Island increased tuition in constant dollars per student by 21.5 percent, the fourth-highest increase in the nation. Total educational and general revenues improved 17.9 percent, substantially above the national average increase.

State Financing of Higher Education

Rhode Island operated a somewhat smaller public system of higher education than average and in FY84 enrolled 25.6 FTE students per 1,000 population. Total appropriations for higher education of $102 per capita were slightly low, 9 percent below average. As a result, appropriations of $3,650 per student were close to the national average, ranking the state 25th. Despite higher tuition revenues than average, poor funding from other sources prevented any improvement in total funding per student, so total educational and general revenues per student were 2 percent below the national average.

The state of Rhode Island appropriated $7.50 per capita for student aid, slightly above the U.S. average of $7.00 per capita. The state also provided $1.20 per capita to support independent institutions.

State Tax Base and Budget

Rhode Island is a poor state as measured by tax potential and had a capacity of $1,009 per capita in 1983 (43rd in the nation), 14 percent below the national average of $1,176. The state had below-average capacity in all tax categories.

Despite a low tax potential, the tax effort of Rhode Island was 26 percent above average, with a state rank of 6th. Selective sales were taxed at a rate 20 percent higher than average, providing additional revenues of $26 million; individual income was taxed at a rate 30 percent above average, for an additional $60 million; and property was taxed at a rate 80 percent above average, to provide an additional $228 million. As a result of low capacity and high effort, the state collected tax revenues of $1,276 per capita, 9 percent above the national average. This placed Rhode Island 13th in the nation in tax funds available to support public services.

Rhode Island allocated 8 percent of its tax revenues to higher education, below the national average of 10 percent. This low rate plus average revenues resulted in appropriations of $102 per capita for institutional support.

If the total operating budget of Rhode Island (including nontax and federal transfers) is considered, public welfare and other programs received a larger share of the budget relative to national average allocations. The other functions, including higher education, received a proportionately smaller share. Higher education's share of the budget decreased slightly from 8.1 percent in 1980 to 7.9 percent in 1984.

Higher Education Enrollments

The ten colleges and universities in Rhode Island enrolled 46,071 FTE students in fall 1983. The public system, consisting of three institutions, enrolled 24,544 (53 percent) of the students. University enrollment, as a share of the public total, was proportionately larger than the national average (44.3 versus 30.3 percent). Comprehensive enrollment matched the national average, and two-year college enrollment was smaller (29.9 versus 38.1 percent). The seven independent institutions in the state enrolled 21,527 FTE students in fall 1983.

In 1983, Rhode Island had an average number of high school graduates per 1,000 population compared to the nation.

Institutional Finances and Characteristics

The University of Rhode Island, with 10,875 students, received state appropriations per student that were 12 percent below the national average for research universities without medical programs. Despite higher tuition than average, other revenues were low. As a result, the total educational and general revenues per student were 13 percent below the U.S. average. Rhode Island College, with 6,335 students, received appropriations 8 percent above average for a comprehensive institution and had average total E&G revenues. Rhode Island Community College, a two-year academic college enrolling 7,334 FTE students, secured appropriations that were 14 percent above average. With high revenues from tuition and private gifts and grants, it functioned with total educational and general revenues per student that were 15 percent better than average.

Rhode Island College had the lowest relative expenditures for instruction among public institutions in the state but very high academic support expenditures. The University of Rhode Island had above-average expenditures for all functions except research per faculty member, which was 39 percent below average.

The state has seven independent institutions reported in this study. Brown University was the best funded, with total educational and general revenues per student 6 percent above average for universities with medical programs. The two baccalaureate colleges had the lowest funding, 16 percent below the national average.

Faculty salaries in 1983 at the nonmedical research university were close to the national average. Salaries at the comprehensive institutions and two-year academic colleges were about 8 percent below average. Salary increases between 1979 and 1983 were below average by 13 percent. Salaries in the independent sector were above average except at the comprehensive institutions.

SOUTH CAROLINA

Recent Trends

Fiscal year 1984 provided a marked improvement in funding for public higher education in South Carolina. A 5.9 percent increase in state appropriations outpaced inflation, resulting in a 3.1 percent net increase in the value of state monies for higher education. Tuition revenues also showed real gains, rising 12.1 percent in constant-dollar terms. As a result, the total pool of revenues available to support the higher education enterprise in South Carolina increased by 6.7 percent, after adjustment for inflation and enrollment increases. Only six other states had more positive fiscal conditions in FY84 than did South Carolina.

The four-year profile (FY80 through FY84) was one of retrenchment for public higher education in South Carolina. Large gains of 31.0 percent in constant-dollar tuition revenues per student (9th largest in the nation) were not sufficient to offset the 16.0 percent real-dollar decline in state funding. As a result, total E&G funding in South Carolina's public institutions declined 6.6 percent per student in constant dollars, far below the national decline of 2.9 percent. Only the two-year occupational colleges and the health-professional institutions experienced increases in total funding of 8.8 and 5.9 percent, respectively.

The private institutions experienced real-dollar gains in total funding of 7.3 percent per student between 1980 and 1984. The profile by sector was uneven, however, with three categories gaining and one losing.

State Financing of Higher Education

South Carolina operated a smaller than average public higher education system, enrolling 27.3 FTE students per 1,000 population in 1984, compared to the national average of 29.1 students per 1,000 population. Appropriations of $4,276 per student were above average by 16 percent. Revenues from tuition and other sources were also above average, resulting in total E&G revenues per student 11 percent above average.

State Tax Base and Budget

South Carolina collected $848 per capita in state taxes in 1983, a level 28 percent below the norm. The comparatively low revenue resulted from a tax capacity 24 percent below average and was compounded somewhat by a state tax effort that was 4 percent below average. South Carolina's tax capacity was well below average in all categories in 1984. Only two other states (Alabama and Mississippi) had a lesser base of taxable economic activity to draw upon. The state's tax structure emphasized individual income tax, ranking 13th nationally in money raised by that means.

Elementary/secondary education received the largest portion (28.5 percent) of direct general expenditures by state and local governments in South Carolina. Health and hospitals followed at 14.8 percent. The share going to higher education, 12.5 percent of the budget, was 32 percent above average and placed South Carolina's per capita expenditures for higher education above national levels--a considerable achievement in view of the state's weak overall revenue picture.

Higher Education Enrollments

The two universities in the state enrolled 35 percent of the students in the public sector in 1984, with another 34 percent of students represented in the two-year schools. In the private sector, over half (57 percent) of the enrollment was concentrated in baccalaureate institutions. Overall, South Carolina's public sector enrolled 83 percent of the higher education students, slightly more than the U.S. average (78 percent).

Institutional Finances and Characteristics

State and local appropriations per student for public higher education in South Carolina were 16 percent above average in 1984, and the state's public institutions relied more heavily than most states on these revenues, obtaining 63 percent of their funds from this source. Tuition revenues were also above average by 8 percent. As a group, public institutions in South Carolina obtained total E&G revenues per student (excluding government contracts) above average by 11 percent, despite recent losses in purchasing power. All sectors except the two largest, the medical university (index 82) and the occupational two-year schools (index 90), had above-average or nearly average revenues. For instance, Clemson University (nonmedical research university) had 31 percent more revenues per student than the average for institutions in its group, primarily because of above-average state funding. The academic/comprehensive two-year schools (index 109) and the comprehensive institutions (index 107) were next in relative funding. The Medical University of South Carolina received funds that were 4 percent above the average, and the public general baccalaureates were funded at just 4 percent below average. In general, given low state revenues, state funding for higher education in South Carolina is impressive.

The private sector in South Carolina was not financed as well as the public sector, comparatively speaking. Total E&G revenues per student (excluding government contracts) were 40 percent below the norm for the private sector as a whole. Tuition revenues per student were 34 percent below average even though dependence on tuition, which represented over 62 percent of all revenues, was above average.

Despite a generally positive funding situation, faculty salaries in public institutions were below average, and particularly so in the two-year institutions and health-professional school. Between 1979 and 1983, faculty salaries increased 37 percent, slightly above the U.S. average. Salaries in the two-year occupational schools made some gains, increasing by 43 percent. Faculty salaries in the private sector averaged 6 to 19 percent lower than national rates for similar types of institutions.

SOUTH DAKOTA

Recent Trends

Between 1980 and 1984, South Dakota's public institutions experienced an 8.9 percent enrollment increase. This expansion, plus 36.6 percent (HEPI) inflation, offset a small appropriation increase of 12.1 percent and resulted in a 24.6 percent reduction in constant-dollar appropriations per student. No other state in the nation experienced more difficult funding circumstances. An attempt was made to make up this loss by increasing tuition revenues 82 percent, representing a 22.7 percent increase per student in constant dollars. But despite the increase in tuition and the improvement in revenues from other sources, there still was a reduction in total educational and general revenues per student of 20.2 percent in constant dollars. No other state faced more constrained financial circumstances.

Enrollment rose slightly by .5 percent at the nine independent institutions in the state between 1980 and 1984, compared to a national gain of 4.5 percent, and revenues from tuition and other sources increased to more than match inflation. This resulted in a 5.1 percent increase in educational and general revenues per student in constant dollars. All types of independent institutions except the other-professional schools made gains in total funding.

State Financing of Higher Education

Total per capita appropriations of $77 for higher education were below average. As a result, appropriations per student of $2,600 were 30 percent below average, ranking the state 49th in the nation. Tuition revenues of 23 percent above average and revenues from other sources increased total funding per student to only 10 percent below the national average.

South Dakota appropriated only $.40 per capita for student aid, substantially below the U.S. average of $7.00. The state appropriated $4.2 million for state boards and commissions. Independent institutions in South Dakota received no direct state support.

State Tax Base and Budget

South Dakota has below-average tax potential and had a capacity of $1,028 per capita in 1983 (37th in the nation), 13 percent below the national average of $1,176. The state had below-average capacity in individual and corporate income and in residential and commercial property. Farm property had 5.2 times the national average tax capacity per capita.

South Dakota's tax effort was 15 percent below average, with a state rank of 39th. (In 1981, South Dakota's tax effort was 7 percent below average with a state rank of 27th.) The state has no individual income tax, in 1983 representing a loss of $111 million in potential revenues. Corporate income was also undertaxed. Property was taxed at a rate 14 percent above the national average rate, resulting in additional revenues of $33 million. The combination of low tax capacity and low tax effort resulted in collected tax revenues of $878 per capita, 25 percent below average and ranking South Dakota 43rd in the nation in tax funds available to support public services. South Dakota allocated 9 percent of its revenues to higher education. This below-average rate plus low collected tax revenues resulted in appropriations of $77 per capita for institutional support, student aid, and other support, 31 percent below average.

If the total operating budget of South Dakota (including nontax and federal revenues) is considered, highways received a much larger share of the budget relative to national average allocations; public welfare and health and hospitals received a proportionately smaller share. Higher education's share was 2 percent below average, a reduction from 10.5 percent in 1980 to 9.3 in 1984.

Higher Education Enrollments

The sixteen colleges and universities of South Dakota enrolled 28,029 FTE students in fall 1983. The public system, consisting of seven institutions, enrolled 21,237 (76 percent) of the students, a nearly average share. Comprehensive and baccalaureate enrollments, as a share of the public total, were proportionately much larger than the national mix (56.9 versus 29.9 percent), while two-year college enrollment was much smaller (3.7 versus 38.1 percent). The nine independent institutions in the state enrolled 6,792 FTE students in fall 1983.

In FY83, South Dakota had a larger number of high school graduates per 1,000 population compared to the nation.

Institutional Finances and Characteristics

Relative to national averages, state appropriations were disproportionately allocated among the various types of institutions in South Dakota. The medical universities--the University of South Dakota--received appropriations 40 percent below the national average. The three baccalaureate colleges and South Dakota School of Mines and Technology (professional) also received low appropriations 43 and 47 percent below average for their respective types of institutions. The single two-year occupational college had appropriations 9 percent above average and the comprehensive institutions received average appropriations.

Except for the medical university and the School of Mines, tuition revenues at public institutions in South Dakota were above average. The comprehensives and two-year occupational institutions also had very high revenues from other sources, so their total educational and general revenues per student were 37 and 24 percent above average, respectively.

The baccalaureate colleges failed to make up their low appropriations with higher tuition and other revenues. Total funding, therefore, fell 17 percent below the national average. The same held true for the School of Mines, with total educational and general revenues per student 30 percent below average. Expenditures for instruction of $2,224 per student at the School of Mines were 24 percent below average.

Despite receiving nearly average tuition revenues, the state's six independent baccalaureate colleges operated with total educational and general funding that was 12 percent below average. Only the two-year occupational schools operated with above-average funding by 78 percent.

Reflective of these lower operating budgets, faculty salaries were below average in both the public and private sectors. Salary increases between 1979 and 1983 were also below national rates.

STATE FINANCING OF HIGHER EDUCATION S. DAKOTA

Data Notes

1983-84

Additional State and Local Government Funding for Higher Education Current Operations

The amounts shown below are included in the "State and Local Government Support of Higher Education" section on the first data page for your state. (The dollar amounts shown on the first data page are shown in per capita terms.)

Student Aid	$ 601,000*
Postsecondary vocational technical education	$
State boards and commissions	$ 4,188,000
Centralized retirement or fringe benefits	$ 3,564,000**
Interstate contracts and reciprocity payments	$
Service functions provided centrally (e.g., computer service, library, telephone, etc.)	$ 38,047,000
Centrally administered capital/debt service	$
Other	$

Clarification of Institutional Financial Reporting

These funds are noted here to clarify differences in practices among the states that affect the comparability of these data.

Capital Outlays	$ 8,519,000
Debt Service	$ 793,000
Sources:	
- state appropriations centrally allocated	$
- state and local appropriations to institutions	$
- tuition and fees	$
- auxiliary enterprises	$ 219,000
- other	$

Tuition and fees reappropriated by the state? Yes

Other Comments

* Does not include work-study support.

** Includes retirement plan, medical/dental, Social Security taxes, unemployment compensation, group life insurance, and workmen's compensation.

Data notes do not include amounts for University of South Dakota - Springfield.

Source: South Dakota Board of Regents

(Indexes shown in bold are based on U.S. average = 100)

TENNESSEE

Recent Trends

State funding for public higher education in Tennessee in FY84 increased 6.0 percent. After adjustment for inflation and enrollment growth of 1.6 percent, this meant a .7 percent decline in state funding. Tuition revenues per student in real dollars also failed to keep pace with inflation, and the value of funding in Tennessee showed a loss of 1.1 percent, after adjustment for inflation.

Tennessee's 1980 to 1984 profile for funding of public higher education was more positive, with constant-dollar gains of 9 percent per student. This is due primarily to the large gain of 17.4 percent in real-dollar funding for tuition revenues. The increase in tuition helped offset the 8.7 percent decline per student in real-dollar state funding. Total funding varied by sector ranging from a 29.8 percent increase at the health-professional institution to a 16.1 percent decline in the two-year academic colleges.

During the same period (1980 to 1984), the private sector had a large overall gain in spending power per student of 16.0 percent. The largest sector, the general baccalaureates, gained 14.0 percent in total funding during this period.

State Financing of Higher Education

Tennessee spent $87 per capita for higher education in 1984, a level 22 percent below average and 33rd among the states. Of those expenditures, almost 98 percent went toward general institutional support, and 2 percent went to student aid.

State Tax Base and Budget

Tennessee falls below the national average in both tax capacity and tax effort. Accordingly, state and local tax revenues per capita of $774 were 34 percent below average, placing Tennessee 3rd from the bottom among the states in the funding of public services. The state ranked 46th in overall tax capacity and did not exceed average capacity in any individual tax category, although Tennessee's tax effort was relatively high with respect to general sales, licenses, and death and gift taxes. The major revenue source in the state was general sales taxes, which, along with selective sales and property taxes, accounted for 87 percent of total revenues.

Health and hospitals (index 145) and highways (index 127) were priority state functions in Tennessee in 1984, while public services (index 86) and public welfare (index 91) received substantially less funding than was typical. Higher education received a larger share than average (index 104).

Higher Education Enrollments

Public enrollments were concentrated in three sectors: the universities, 40 percent; the comprehensive institutions, 32 percent; and the two-year colleges, 27 percent. An average proportion (8 percent) of students were studying at graduate levels in 1984. Private enrollments were highly concentrated in baccalaureate institutions--60 percent. At 151,841 FTE students, Tennessee's total enrollment was the 18th largest in the nation.

Institutional Finances and Characteristics

Tennessee's public colleges and universities were funded at rates below the national average. Although attendance at the public sector was 13 percent below average in 1984, state funding at 17 percent below average was even lower, creating a level of state funding that, at $2,992 per student, was 19 percent below national rates. All categories of public institutions were underfunded by the state, at rates between 14 and 40 percent below average. As mentioned above, Tennessee is among the poorest states in the United States. Although Tennessee allocated an above-average share of these smaller tax revenues to higher education in 1984, state support per student was still below the national average. If total E&G revenues per student (excluding government contracts) are used as the measure, public institutions in Tennessee received an average of $4,687 per student, a level 17 percent below U.S. averages.

Within the public sector, no sector was funded at the average for comparable institutions; the academic/comprehensive two-year institutions came the closest (index 88). The universities (University of Tennessee--Knoxville and East Tennessee State University) operated with funds 25 percent below average. The health-professional school (the University of Tennessee Health Science Center) was funded at 28 percent below average. The six comprehensive institutions operated with 15 percent fewer funds per student than similar schools.

Funding in the major segments of private higher education in Tennessee was also below average. In the largest sector, the private baccalaureates, total funding was 7 percent below average. In part, this lower funding is due to the lower proportion of revenues coming from tuition.

Reflective of these lower operating budgets, faculty salaries in 1983 were overall below average in both the public and private sectors by 11 percent. Faculty salaries increased by only 30 percent between 1979 and 1983, which compared poorly with the 36 percent gain nationally.

Data Notes

1983-84

Additional State and Local Government Funding for Higher Education Current Operations

The amounts shown below are included in the "State and Local Government Support of Higher Education" section on the first data page for your state. (The dollar amounts shown on the first data page are shown in per capita terms.)

Student Aid	$ 7,662,748
Postsecondary vocational technical education	$
State boards and commissions	$
Centralized retirement or fringe benefits	$ 69,627,269*
Interstate contracts and reciprocity payments	$
Service functions provided centrally (e.g., computer service, library, telephone, etc.)	$
Centrally administered capital/debt service	$
Other	$

Clarification of Institutional Financial Reporting

These funds are noted here to clarify differences in practices among the states that affect the comparability of these data.

Capital Outlays	$
Debt Service	$
Sources:	
- state appropriations centrally allocated	$ 18,002,000
- state and local appropriations to institutions	$
- tuition and fees	$
- auxiliary enterprises	$
- other	$

Tuition and Fees reappropriated by the state? Yes**

Other Comments

* Retirement expenditures include unfunded liability payments.

** Tuition and fees are retained by each institution and not remitted to the state's general fund. As a result, all tuition and fees are reported as such and there is no reappropriation because there was not an initial remittance.

TEXAS

Recent Trends

Texas achieved small constant-dollar improvements in state support for higher education in FY84. An 11.2 percent increase in state appropriations coupled with a 5.2 percent enrollment gain and 36.6 percent inflation (HEPI) provided a .7 percent net gain. Tuition revenues were not sufficient to offset inflation, declining by 1.6 percent per student in real dollars. Overall, the operating base of public institutions showed a net gain of 1.7 percent. Although all but two categories of institutions experienced some improvement in their funding bases, the size of these shifts varied from 1.1 percent in constant dollars per student at the comprehensive institutions to 107.2 percent at the general baccalaureate institutions. The two-year academic colleges and the health-professional institutions had an erosion in their purchasing power of .6 and 1.7 percent, respectively.

Over the longer term, FY80 to FY84, the profile of strong financial improvement for public higher education in Texas was evident. During those four years, inflation-adjusted revenues per student in Texas jumped 6.0 percent, above the national average decline of 2.9 percent.

Again, however, when sector-by-sector circumstances are examined, the profile that emerges is mixed. The University of Houston--Central Campus (the medical university) experienced an erosion in purchasing power of 3.5 percent per student. By contrast, for the medical research university (Texas A&M) there was a 21.8 percent gain in the value of funding between 1980 and 1984. The largest category, the academic/comprehensive two-year institutions, had gains of 2.3 percent. Other sectors experienced gains ranging from .7 to 173.2 percent.

Overall, then, this period for Texas was one of strong general gains fueled by a major infusion of state support; at the same time, significant sector differences are evident. Gains were also posted for independent higher education in Texas both in FY84 and for the 1980 to 1984 period (1.6 and 18.5 percent respectively).

State Financing of Higher Education

Texas operated a larger public higher-education system than average, and in FY1984 enrolled 31.5 FTE students per 1,000 population. Appropriations of $4,623 per student were also above average. Tuition revenues were about one-half the national average but revenues from other sources were above average, so total E&G revenues per student were 14 percent above average.

State Tax Base and Budget

In 1984 Texas was the fifth-richest state in the nation in terms of taxable economic activity, with a total tax capacity 24 percent above average. The state had above-average capacity in 9 of the 10 potential tax categories, the exception being residential property. Texas, however, had very low tax rates (only Nevada had a lower overall rate). Despite its above-average tax capacity, Texas was above average in tax effort in only one category: licenses. The state has no income tax (individual or corporate), relatively low property tax levels, and low sales-tax rates. As a consequence, the state collected 33 percent less in tax revenues than its strong tax capacity would yield at average tax rates. Because the state begins with a strong tax capacity, actual tax revenues were only 17 percent below average.

An average or above-average share of the Texas state budget in 1984 went to each category except public welfare and other. Public welfare in particular received about half of the typical share of the budget accorded by the states. Higher education received 12.7 percent of the budget in Texas in 1984, a slight gain from 1980.

Higher Education Enrollments

The structure of higher education in Texas was fairly similar to the national pattern, though there was a slightly greater emphasis on the comprehensive level. As a consequence, the proportion of students enrolled at the graduate level was 25 percent above average. This created additional funding requirements for Texas as compared to other states. But the larger average size of its institutions in the public sector counterbalances these costs to some degree.

Institutional Finances and Characteristics

In the public sector in Texas in 1984, state enrollments were above average, and state support per student was 25 percent above average. This support is unevenly distributed among various categories of public institutions. State funding was below average by 1 percent at the nonmedical research university and by 2 percent at the comprehensive institutions. At all other categories of public institutions, state support per student exceeded national levels and generally by large amounts, ranging from 13 percent to over 500 percent above average. These levels represent an increasingly important role for state funding, which carried 66 percent of the budget of public institutions in 1984.

Tuition revenues at public institutions in Texas continued to be substantially lower than those collected elsewhere; on average, they were 47 percent below U.S. norms. Every category of public institution followed that pattern, with per-student tuition revenues ranging between 27 and 81 percent below average. By contrast, revenues from private gifts were above average by 32 percent. Total revenue patterns, however, varied by sector. Four of the ten public sectors in Texas functioned with revenues that were 1 to 13 percent below average (including three of the university sectors and the comprehensive-institutions sector).

Gains in funding were accompanied by gains in faculty salary. Salaries in Texas grew 26 percent faster than the national average between 1979 and 1983. Still, statewide, salary levels were average in the public sector. In the private sector, they were 3 percent below average.

Additional State and Local Government Funding for Higher Education Current Operations

The amounts shown below are included in the "State and Local Government Support of Higher Education" section on the first data page for your state. (The dollar amounts shown on the first data page are shown in per capita terms.)

Student Aid	$
Postsecondary vocational technical education	$
State boards and commissions	$
Centralized retirement or fringe benefits	$
Interstate contracts and reciprocity payments	$
Service functions provided centrally (e.g., computer service, library, telephone, etc.)	$
Centrally administered capital/debt service	$
Other	$

Clarification of Institutional Financial Reporting

These funds are noted here to clarify differences in practices among the states that affect the comparability of these data.

Capital Outlays	$
Debt Service	$

Sources:

- state appropriations centrally allocated	$
- state and local appropriations to institutions	$
- tuition and fees	$
- auxiliary enterprises	$
- other	$

Tuition and Fees reappropriated by the state? Yes

Other Comments

Source: No data notes were provided by the state higher education agency/commission.

UTAH

Recent Trends

The 45.4 percent increase in appropriations for public higher education in Utah from 1980 to 1984 was not sufficient to offset enrollment growth and inflation. With enrollment increasing 16.7 percent (twice the national average) and inflation at 36.6 percent (HEPI), appropriations per student in constant dollars declined 8.9 percent, a record similar to the national average loss of 8.9 percent. Tuition revenues gained in constant dollars by 6.1 percent but were not sufficient to counteract the loss in appropriations. As a result, total educational and general revenues per student in constant dollars decreased by 7.6 percent. All institutional types decreased total funding from between .3 and 21.2 percent.

State Financing of Higher Education

Relative to its population, Utah operated a larger public system of higher education than average in 1984 and enrolled 33.0 FTE students per 1,000 population. Total appropriations for higher education were larger than average nationally, equal to $170 per capita. Thus, appropriations per student of $3,788 were 2 percent above the national average. High revenues from private gifts and grants and from other sources increased total funding per student to 12 percent above the national average.

Utah appropriated $3.40 per capita for student financial aid, compared to the U.S. average of $7.00 per capita. The state provided $1.1 million for state boards and commissions and $50,000 for tuition reciprocity payments.

State Tax Base and Budget

Utah had a tax capacity of $965 per capita in 1983 (45th in the nation), 18 percent below the national average of $1,176. The state's individual income tax potential was 34 percent below average.

Utah's tax effort was 2 percent below the national average, with a state rank of 20th. The state had a heavy general sales tax that brought in an additional $91 million in revenues over what would have been collected at national average rates. Also, individual income was taxed at a rate 38 percent above the national average, resulting in $95 million in additional revenues. This was offset, however, by $59 million lost in potential property taxes and $66 million lost in potential severance taxes. The combination of low tax capacity and average effort resulted in collected tax revenues of $947 per capita, 19 percent below average and ranking Utah 36th in the nation in tax funds available to support public services.

Utah allocated 18 percent of its tax revenues to higher education, highest in the nation. This high rate created above-average appropriations of $170 per capita for student aid, institutional support, and other support.

Higher education is a state priority in Utah, receiving 14.3 percent of the total operating and capital budget (including nontax and federal transfers) in 1984. Elementary/secondary education and highways also received a larger share of the budget relative to national average allocations. Public welfare, health and hospitals, and public services received a proportionately smaller share. Between 1980 and 1984 higher education's share of the budget dropped slightly.

Higher Education Enrollments

The nine public colleges and universities in Utah enrolled 53,245 FTE students in fall 1983. University enrollment, as a share of the public total, was proportionately much larger than the national mix (54.7 versus 30.3 percent), as were general baccalaureate enrollments (19.9 versus 4.0 percent). Two-year college enrollment was proportionately smaller (25.4 versus 38.1 percent). No institutions are reported in this study.

In 1983, Utah had an average number of high school graduates per 1,000 population compared to the nation.

Institutional Finances and Characteristics

State appropriations were inconsistently allocated among the public institutions in Utah relative to national averages. Utah State University, a nonmedical research university, and the general baccalaureate colleges received appropriations that were average, while the University of Utah, a medical research university, received appropriations that were 21 percent below average. Appropriations at the two-year academic colleges were 49 percent above average (ranked 5th among 46 states). However, two-year occupational colleges received appropriations that were 29 percent below average. Only the two-year academic colleges received above-average tuition revenues. The combination of high tuition revenues and high appropriations for these schools caused total educational and general revenues to exceed the national average by 48 percent. The medical research university and two-year occupational schools operated with total educational and general funds per student 15 and 31 percent below average, respectively.

Public institutions in Utah spent more than the national average for instruction and academic support per student. This did not hold true for the University of Utah, where low appropriations and tuition revenues created a correspondingly low expenditure pattern.

Faculty salaries were generally near the national average except at the state's two-year academic colleges, where faculty salaries were 16 percent below the national average. Between 1979 and 1983 salary increases were close to the U.S. average.

1983-84

Additional State and Local Government Funding for Higher Education Current Operations

The amounts shown below are included in the "State and Local Government Support of Higher Education" section on the first data page for your state. (The dollar amounts shown on the first data page are shown in per capita terms.)

Student Aid	$	5,447,786
Postsecondary vocational technical education	$	
State boards and commissions	$	1,078,060
Centralized retirement or fringe benefits	$	
Interstate contracts and reciprocity payments	$	50,000
Service functions provided centrally (e.g., computer service, library, telephone, etc.)	$	
Centrally administered capital/debt service	$	
Other	$	133,461

Clarification of Institutional Financial Reporting

These funds are noted here to clarify differences in practices among the states that affect the comparability of these data.

Capital Outlays	$	*
Debt Service	$	
Sources:		
- state appropriations centrally allocated	$	4,460,000
- state and local appropriations to institutions	$	
- tuition and fees	$	
- auxiliary enterprises	$	
- other	$	

Tuition and Fees reappropriated by the state? Yes

Other Comments

Brigham Young University, an independent nonmedical university, has been excluded from the analysis because of incomplete reporting of HEGIS data.

VERMONT

Recent Trends

Appropriations to Vermont's five public institutions increased 36.2 percent between 1980 and 1984, above the 34.6 percent national average. With slight enrollment growth of .6 percent and inflation of 36.6 percent (HEPI), these appropriations represented a 1.0 percent loss per student in constant dollars. The national average reduction was 8.2 percent. Institutions more than made up for this loss by increasing tuition revenues by 56 percent and by increasing revenues from other sources. As a result, total educational and general revenues per student in constant dollars increased 11.8 percent, the second-largest increase in the nation, while the national average declined 2.9 percent. All institutional types shared in the increase.

Enrollment at the independent institutions in the state declined 13.2 percent between 1980 and 1984, and tuition revenues increased a substantial 76 percent. This represents a 14.1 percent gain per student in constant dollars. Revenues from other sources kept pace, so total educational and general revenues per student in constant dollars increased 12.3 percent. Increases of total funding in real dollars were almost seven times the national average at the two-year academic schools.

State Financing of Higher Education

Relative to its population, Vermont operated a smaller public system of higher education than average and enrolled 25.6 FTE students per 1,000 population. Appropriations per student of $2,142 were 42 percent below average, ranking the state 50th in the nation. In order to balance the low state support, institutions received tuition revenues that were 3.4 times higher than the national average. In addition, substantial revenues from other sources raised total funding per student for all public institutions to a level 46 percent above the national average, ranking the state 4th in this regard.

State Tax Base and Budget

Vermont had a tax capacity of $1,102 per capita in 1983 (30th in the nation), 6 percent below the national average of $1,176. (In 1981, Vermont's tax capacity was 16 percent below average, with a state rank of 41st.) The state had below-average capacity in individual and corporate income as well as property.

Vermont's tax effort was 5 percent below average, with a state rank of 23rd. The state collected $51 million in additional property taxes because of higher rates than average, but lost $108 million in potential revenue because of low general sales taxes. Individual income was taxed at rates 18 percent above the national average. As a result of low capacity and average effort, collected tax revenues of $1,050 per capita were 11 percent below average, ranking Vermont 30th in the nation in tax funds available to support public services.

If the total operating budget of Vermont (including nontax and federal transfers) is considered, higher education and highways received a larger share of the budget relative to national average allocations, while health and hospitals and public services received proportionately smaller shares.

Higher Education Enrollments

The fifteen colleges and universities in Vermont enrolled 22,898 FTE students in fall 1983. The public system, consisting of five institutions, enrolled 13,324 (only 58 percent) of the students, far below the 78 percent national average. University enrollment, as a share of the public total, was proportionately much larger than the national mix (68.1 versus 30.3 percent), as was baccalaureate college enrollment (26.6 versus 4.0 percent). However, two-year college enrollment was much smaller (5.3 versus 38.1 percent). The ten independent institutions in the state enrolled 9,574 FTE students in fall 1983. These institutions served 42 percent of all students, ranking Vermont 4th in the nation in this regard.

Vermont had an above-average number of high school graduates per 1,000 population compared to the nation.

Institutional Finances and Characteristics

The University of Vermont and State Agricultural College received state appropriations of $2,281 per student. This was 51 percent below average for a university with a medical program, and ranking Vermont last. However, by receiving above-average revenues from tuition, private gifts and grants, and other sources, the university succeeded in obtaining total educational and general revenues per student that were 28 percent above average. Expenditures for all functions at the university were well above average, with public services per 1,000 capita provided at 32 times the national average.

The three public general baccalaureate colleges also received low levels of state support. However, because tuition revenues were twice the national average, they succeeded in reaching an above-average level (by 8 percent) of total educational and general revenues per student. The state's single two-year occupational college (Vermont Technical College) received state appropriations of $2,775 per student, 6 percent above the national average. When high tuition revenues were added, total educational and general revenues at this school were 63 percent above average.

Vermont's ten independent colleges received tuition revenues per student that were 20 percent above average and were generally well funded, with the exception of the other-professional schools. Instructional expenditures per student were generally above average.

Between 1979 and 1983 faculty salaries increased in Vermont's public institutions by 46 percent, well above the national average increase of 36 percent. Still, this increase was not sufficient to bring salaries up to the national average. Overall, salaries in 1983 remained 8 percent below average. Salaries were above average in the independent sector for all types of institutions except the comprehensive and other-professional institutions.

Data Notes

1983-84

Additional State and Local Government Funding for Higher Education Current Operations

The amounts shown below are included in the "State and Local Government Support of Higher Education" section on the first data page for your state. (The dollar amounts shown on the first data page are shown in per capita terms.)

Student Aid $

Postsecondary vocational technical education $

State boards and commissions $

Centralized retirement or fringe benefits $

Interstate contracts and reciprocity payments $

Service functions provided centrally (e.g., computer service, library, telephone, etc.) $

Centrally administered capital/debt service $

Other $

Clarification of Institutional Financial Reporting

These funds are noted here to clarify differences in practices among the states that affect the comparability of these data.

Capital Outlays $
Debt Service $

Sources:

- state appropriations centrally allocated $
- state and local appropriations to institutions $
- tuition and fees $
- auxiliary enterprises $
- other $

Tuition and Fees reappropriated by the state?

Other Comments

Source: No data notes were provided by the state higher education agency/commission.

(Indexes shown in bold are based on U.S. average = 100)

VIRGINIA

Recent Trends

State appropriations for public institutions in Virginia declined 2.0 percent in fiscal year 1984. During the same period, enrollments remained stable. Once adjustments are made for inflation, state funding actually declined 7.3 percent. However, tuition revenues gained ground but not enough to make up for the loss in state funding. As a result, the total operating budgets of public institutions experienced a 4.9 percent erosion in purchasing power. The loss primarily affected the medical university (Virginia Commonwealth University), which experienced a 25.4 percent loss in total funding in 1984.

Virginia boosted its state and local appropriations to public higher education by only 17.7 percent between 1980 and 1984. Only four states had smaller increases. Enrollments increased by 7.1 percent. With inflation and the enrollment increase factored in, state funding declined 19.6 percent in real dollars per student. Increased revenues from tuition and other sources helped offset the decline in state funding somewhat, and the decline in total educational and general revenues per student was only 9.4 percent.

Enrollment at the state's 30 independent institutions grew 9.1 percent between 1980 and 1984. Tuition increases offset inflation and the enrollment growth, and revenues from other sources increased substantially. As a result, total educational and general revenues per student in constant dollars increased 5.8 percent.

State Financing of Higher Education

Relative to its population, Virginia operated a larger public higher education system than average in 1984 and enrolled 31.3 FTE students per 1,000 population. Total appropriations of $115 per capita for higher education were average. Appropriations per student of $3,054 were 17 percent below the national average, ranking the state 39th. Slightly higher tuition revenues than average and private gifts and grants increased total funding per student slightly, to 11 percent below the national average.

Virginia appropriated $4.10 per capita for student financial aid, compared to the national average of $7.00 per capita, and spent $1.30 per capita in support of independent institutions. State boards and commissions received $6.9 million in state support.

State Tax Base and Budget

Virginia had a tax capacity of $1,124 per capita in 1983 (27th in the nation), 4 percent below the national average of $1,176. Tax capacity was lower than the U.S. average for selective sales, licenses, corporate income, and commercial property.

Virginia's tax effort was also below the national average, by 11 percent, with a state rank of 32nd. The state taxed selective sales and individual income at higher rates than the national average, for additional income of $290 million. This was more than offset by taxing general sales, corporate income, and property taxes at levels below the national rates, for a combined loss of $928 million in potential revenues. The combination of nearly average capacity and low effort resulted in collected tax revenues of $1,003 per capita, 15 percent below average, ranking Virginia 33rd in the nation in tax funds available to support public services.

Virginia allocated 11 percent of its tax revenues to higher education, above the national average of 10 percent. Low revenues, however, resulted in per capita appropriations of $115 for institutional support, student aid, and other support, equal to the U.S. average.

If the total operating budget of Virginia (including nontax and federal revenues) is considered, higher and elementary/secondary education and highways received a larger share of the budget than the national average. Public welfare, health and hospitals, and public service received a proportionately smaller share. Between 1980 and 1984, higher education increased its share of the budget from 10.8 to 11.6.

Higher Education Enrollments

The 66 colleges and universities in Virginia enrolled 203,886 FTE students in fall 1983. The public system, consisting of 39 institutions, enrolled 172,861 (85 percent) of the students, a larger share than average. University enrollment, as a share of the public total, was near the national level (29.8 versus 30.3 percent). Four-year college enrollment was proportionately slightly larger (36.5 versus 29.9 percent), while two-year college enrollment was smaller (33.7 versus 38.1 percent). The 27 independent institutions in the state enrolled only 31,025 FTE students in fall 1983, a relatively small share.

In FY83, Virginia had an above-average number of high school graduates per 1,000 population compared to the nation.

Institutional Finances and Characteristics

Only the nonmedical research university and the medical university received average or above-average per-student appropriations. All other institutions operated with funding from 10 to 27 percent below average. Each type of institution received above-average tuition revenues per student (except the two-year occupational schools). However, on average, the public institutions functioned with 11 percent less per student in general operating funds. Only the nonmedical research university and medical university operated with above-average funding per student.

Corresponding to the unevenness in state support, instructional expenditures per student were above average at the universities but below average at the other public institutions. Academic support per student was above average at all public institutions except at the comprehensive colleges.

Most students in the private sector were enrolled at the state's 4 comprehensive and 18 baccalaureate colleges. Both types of institutions were well funded. The comprehensive colleges had strong endowment income and the baccalaureate colleges obtained substantial funding through private gifts and grants. Expenditures for instruction and academic support were at or above the national average, while expenditures for research per faculty member were low.

Faculty salaries in public institutions were generally below average, and particularly so at the two-year schools. However, salary increases at these institutions were average or above during the four-year period from 1979 to 1983. The largest increase occurred at the medical university, where increases were 14 percent above national rates. In the independent sector salaries were 16 percent below average.

Data Notes

1983-84

Additional State and Local Government Funding for Higher Education Current Operations

The amounts shown below are included in the "State and Local Government Support of Higher Education" section on the first data page for your state. (The dollar amounts shown on the first data page are shown in per capita terms.)

Student Aid	$ 21,894,552
Postsecondary vocational technical education	$
State boards and commissions	$ 6,983,210
Centralized retirement or fringe benefits	$
Interstate contracts and reciprocity payments	$
Service functions provided centrally (e.g., computer service, library, telephone, etc.)	$ 151,790
Centrally administered capital/debt service	$
Other	$ 2,968,350*

Clarification of Institutional Financial Reporting

These funds are noted here to clarify differences in practices among the states that affect the comparability of these data.

Capital Outlays	$ 76,122,276
Debt service that is part of state and local appropriations to public institutions in the state	$ 48,339,125
Sources:	
- state appropriations centrally allocated	$
- state and local appropriations to institutions	$
- tuition and fees	$
- auxiliary enterprises	$
- other	$

Tuition and Fees reappropriated by the state? **

Other Comments

* Includes programs for Eminent Scholars, Maintenance of Excellence, Affirmative Action, and regional grants and contracts.

** Tuition and fees are appropriated and were about 35 percent of the adjusted E&G institutional appropriations (other revenue makes up the balance of an institution's E&G Non-General Fund Appropriations).

Source: State Council of Higher Education for Virginia

(Indexes shown in bold are based on U.S. average = 100)

WASHINGTON

Recent Trends

Washington led the nation in improving funding for state-operated institutions in 1984. Appropriations increased 22.3 percent, almost three times the national average. Enrollments dropped slightly (.4 percent). Consequently, appropriations per student in constant dollars increased 16.7 percent, a level that was unsurpassed in the nation. Public institutions also increased tuition sufficiently to offset inflation, resulting in a 7.7 percent gain per student in constant dollars. This moderated the gain achieved through appropriations, but total E&G revenues per student in constant dollars still increased 12.9 percent, more than in any other state. All categories of public institutions were impacted, with total revenue gains per student adjusted for inflation increasing between 1.5 and 20.5 percent in FY84.

The four-year (FY80 to FY84) profile for Washington was also impressive, showing a purchasing power gain of 10.7 percent, which ranked fourth in the nation. Only the comprehensive and general baccalaureate sectors experienced losses in total funding during the four-year period (6.8 and 5.9 percent respectively). The research university experienced increases in purchasing power of 8.9 percent. The private sector also benefited from revenue gains in both FY84 and for the four-year period, by 2.5 and 11.9 percent respectively.

State Financing of Higher Education

Relative to its population, Washington operated a larger public higher-education system than average and in FY1984 enrolled 34.4 FTE students per 1,000 population, compared to the national average of 29.1 percent per 1,000 population. The net value of above-average state funding was therefore decreased somewhat, and state appropriations per student were 2 percent below average. Total funding per student was at the U.S. average (index 99).

State Tax Base and Budget

Washington had an average capacity (index 101) to raise taxes in 1983 and its tax effort was slightly above average (index 104). Tax revenues collected were therefore above the U.S. average (by 5 percent). Washington's tax capacity was strongest in individual income, residential and farm property, and licenses. Its tax structure was heavily weighted toward sales-tax categories--both general sales, where it had the highest rate in the U.S., and selective sales, where it had the third-highest rate. The state collected no income taxes, personal or corporate. Property taxes in the state were also lower than average.

When total state resources are combined (including federal revenue-sharing funds), the state's total budget was 7 percent larger than average. Higher education received an 11.1 percent share of that budget, a share 17 percent above average. Highways, public services, and elementary/secondary education were also favored state activities, at the expense of public welfare, health and hospitals, and other services. Although higher education received an above-average share of a larger than average state pie, its share of the state budget declined from 1980 (when it received 11.8 percent) to 1984 (when it received 11.1 percent).

Higher Education Enrollments

Washington enrolled 170,106 FTE students in fall 1983, ranking 16th in the nation. More than half of those students (51 percent) attended one of the 27 community colleges in the state, a very large share compared to other states. The comprehensive and baccalaureate sectors were smaller than average, and university-level enrollments were just above average. Washington's student population is less graduate as a whole because of the emphasis on the two-year sectors, and the system is therefore less expensive to run.

Institutional Finances and Characteristics

State appropriations per student in Washington were 2 percent below average partly due to a pool of students that was nearly 20 percent larger than usual. Only the medical research universities (University of Washington and Washington State University) received below-average state funding.

Tuition revenues were low in the public sector (10 percent below average), but revenues from other sources were above average, and consequently, the total revenues per student were average. However, revenue profiles of the different groups of institutions were uneven. The general baccalaureate institutions were most successful in garnering resources, collecting 56 percent more funds per student than average. The large two-year academic sector also functioned with above-average funding (by 7 percent). The medical research universities were the least successful in obtaining revenues and so function with 8 percent less funding than average.

Overall, faculty salaries in 1983 were close to the national average, however, there were clear variations by rank. Salaries for full professors were below average in all cases, while those for the lower ranks were close to or above average. Between 1979 and 1983 salaries increased at an average rate slower than the U.S. average.

1983-84

Additional State and Local Government Funding for Higher Education
Current Operations

The amounts shown below are included in the "State and Local Government Support of Higher Education" section on the first data page for your state. (The dollar amounts shown on the first data page are shown in per capita terms.)

Student Aid	$
Postsecondary vocational technical education	$
State boards and commissions	$
Centralized retirement or fringe benefits	$
Interstate contracts and reciprocity payments	$
Service functions provided centrally (e.g., computer service, library, telephone, etc.)	$
Centrally administered capital/debt service	$
Other	$

Clarification of Institutional Financial Reporting

These funds are noted here to clarify differences in practices among the states that affect the comparability of these data.

Capital Outlays	$
Debt Service	$
Sources:	
- state appropriations centrally allocated	$
- state and local appropriations to institutions	$
- tuition and fees	$
- auxiliary enterprises	$
- other	$

Tuition and Fees reappropriated by the state? Yes

Other Comments

WEST VIRGINIA

Recent Trends

State appropriations to public higher education in West Virginia increased 8.6 percent in fiscal year 1984. The increase was sufficient to cover both inflation and a small 1.1 percent increase in enrollments, making for a 2.3 percent real-dollar increase in state funding. Tuition revenues also surpassed inflation, which resulted in a 13.5 percent gain per student in constant dollars. Thus, West Virginia public institutions received a gain of 10.6 percent in the value of total funding per student. This gain followed two years of retrenchment in state appropriations and a loss in overall purchasing power in FY82.

Between 1980 and 1984, the 18.4 percent increase in appropriations was completely offset by inflation and enrollment increases, which created an 18.9 percent per student loss in constant dollars. During this period real-dollar gains were made in tuition revenues per student as they increased by 47.3 percent, the third-largest increase in the nation. The increase in tuition revenues was not sufficient to offset the decline in state funding and as a result, total E&G revenues per student in constant dollars declined 9.5 percent.

Enrollment at the state's independent institutions decreased 7.1 percent from 1980 to 1984, compared to the 4.5 percent national average increase. Tuition kept pace with inflation, and there were sizable increases in revenues from other sources. As a result, total educational and general revenues per student in constant dollars increased 2.5 percent.

State Financing of Higher Education

Total per capita appropriations of $100 for higher education were 11 percent below the national average. As a result, appropriations per student of $3,256 were 12 percent below average, ranking the state 35th in the nation. Low revenues from tuition and private gifts and grants resulted in total funding per student that was 12 percent lower than the national average.

The state appropriated $3.00 per capita for student financial aid, compared to the U.S. average of $7.00 per capita. Independent institutions in West Virginia received no state support. State boards and commissions received $1.3 million for their operations.

State Tax Base and Budget

West Virginia's potential tax wealth was $1,024 per capita in 1983 (39th in the nation), 13 percent below the national average of $1,176. The state had below-average capacity in general and selective sales, individual and corporate income, and residential and farm property. West Virginia's tax effort was 12 percent below the national average, with a state rank of 35th. The state taxed corporate income at 49 percent below national rates, for a loss of $44 million in potential income; property was taxed at 44 percent below national rates, for a loss of $275 million. The combination of low tax capacity and low tax effort resulted in collected tax revenues of $898 per capita, 24 percent below average. This placed West Virginia 41st in the nation in tax funds available to support public services.

West Virginia allocated 11 percent of its tax revenues to higher education, compared to the national average of 10 percent. Due to low tax revenues, however, this allocation resulted in per capita appropriations of only $100 for institutional support, student aid, and other support.

If the total operating budget of West Virginia (including nontax and federal revenues) is considered, highways and elementary/secondary education received a larger share of the budget relative to national average allocations. Higher education, public welfare, and public services all received a proportionately smaller share. Between 1980 and 1984, higher education's share increased slightly from 8.8 percent to 9.2 percent.

Higher Education Enrollments

The 26 colleges and universities in West Virignia enrolled 61,899 FTE students in fall 1983. The public system, consisting of 16 institutions, enrolled 53,790, or 87 percent of the students compared to 78 percent nationally. University enrollment, as a share of the public total, was slightly higher than the national level (33.3 versus 30.3 percent). Four-year college enrollment was proportionately much larger (53.2 versus 29.9 percent), while two-year college enrollment was much smaller (11.1 versus 38.1 percent). The 10 independent institutions in the state enrolled 8,109 FTE students in fall 1983, representing only 13 percent of students in the state.

In 1983, West Virginia had slightly fewer high school graduates per 1,000 population than the national average.

Institutional Finances and Characteristics

In 1984, West Virginia allocated $3,256 per student to public institutions. However, the distribution of these funds varied by type of institution. Two types--the medical university (West Virginia University) (index 109) and the two-year academic school (Potomac State College) (index 129)--were funded by the state at levels above those of similar schools elsewhere. The remaining classifications were funded at rates below average. The two-year occupational schools and the health-professional school (West Virginia School of Osteopathic Medicine) had the lowest relative level of funding--35 and 67 percent, respectively, below levels for similar institutions across the United States.

Revenues from tuition were below average (index 85) in the public sector, revenues from private gifts were 51 percent below average, and those from other sources were 13 percent above average. In net figures, total educational and general funding per student was 12 percent below average, with variations by sector. Only the medical university and two-year occupational schools operated with above-average funding. The remaining institutions operated with funding that was 10 to 72 percent below average.

The seven independent baccalaureate colleges in the state received tuition revenues that were 10 percent below average and obtained total educational and general revenues per student that were 13 percent below the national average. The independent two-year academic colleges operated with total funding 54 percent below average for that type of institution.

Faculty salaries in 1983 in West Virginia were below average in both the public and private sectors. Salary increases between 1979 and 1983 lagged behind the national average by about 15 percent.

1983-84

Additional State and Local Government Funding for Higher Education Current Operations

The amounts shown below are included in the "State and Local Government Support of Higher Education" section on the first data page for your state. (The dollar amounts shown on the first data page are shown in per capita terms.)

Student Aid	$ 5,943,456*
Postsecondary vocational technical education	$
State boards and commissions	$ 1,340,000
Centralized retirement or fringe benefits	$ 18,330,000
Interstate contracts and reciprocity payments	$ 711,000
Service functions provided centrally (e.g., computer service, library, telephone, etc.)	$ 4,590,000
Centrally administered capital/debt service	$
Other	$

Clarification of Institutional Financial Reporting

These funds are noted here to clarify differences in practices among the states that affect the comparability of these data.

Capital Outlays	$ 17,750,000
Debt Service	$ 13,580,000

Sources:

- state appropriations centrally allocated	$
- state and local appropriations to institutions	$
- tuition and fees	$ 26,146,000*
auxiliary enterprises	$ 5,051,000
- other	$ 133,000

Tuition and Fees reappropriated by the state? No

WISCONSIN

Recent Trends

Appropriations for public higher education in Wisconsin increased 32.7 percent between 1980 and 1984, close to the national average. However, enrollment growth of 11.3 percent and an inflation rate of 36.6 percent (HEPI) caused a 12.8 percent decline in appropriations per student in constant dollars. All categories of institutions shared in the loss. Tuition revenues also declined by 2.4 percent in real value per student, resulting in an overall 8.8 percent decline in total E&G revenues per student in constant dollars. No categories of institutions were spared with losses ranging from .6 percent at the medical research university to 28.5 percent at the two-year academic colleges.

In contrast, the independent sector saw its overall spending power improve from FY80 to FY84 by 12.7 percent. These improvements were evident in most categories of independent schools.

State Financing of Higher Education

Wisconsin spent $107 per capita for higher education in FY84, almost equal to the national average. Ninety-one percent of this expenditure went toward general support of institutions, and student aid received 9 percent.

State Tax Base and Budget

Wisconsin raised $1,407 per capita in state taxes in 1983, 20 percent more than the U.S. average. Although Wisconsin's inherent tax wealth was 13 percent below average, the state had a high tax rate in 1984 (ranking 4th nationally), which accounted for the state's large pool of tax revenues. Through strong tax efforts in both individual income tax (the state ranked 5th among the states in this category) and property taxes (with a rank of 6), the below-average inherent wealth was overcome and an above-average pool of tax revenues was achieved by the state.

Elementary/secondary education received 25.6 precent of the state budget (the largest portion), followed by 16.1 percent for other services and 15.1 percent for public welfare. Higher education and public services both received about 13 percent of the budget, and highways receive 9.2 percent. Health and hospitals and other services were most underfunded as compared to the U.S. average. (The portion going to higher education increased from 12.1 percent in 1980 (to 12.7 percent in 1980), that allotment was 34 percent greater than the average higher education budget share.)

Higher Education Enrollments

In 1984, 87 percent of the total enrollment in Wisconsin was in the public sector. Of the public students, 31 percent enrolled in universities, 36 percent attended comprehensive institutions, and 31 percent attended two-year institutions. The University of Wisconsin--Madison (medical research university) enrolled a larger than average number of graduate students as compared to similar institutions--25 percent versus 20 percent--thus creating additional funding needs for the campus. As for private enrollments, 47 percent of the students were concentrated in baccalaureate institutions and 36 percent attended the medical university (Marquette University).

Enrollments in the public sector rose 11.3 percent from 1980 to 1984, and there was a similar rise (6.4 percent) in the private sector. With 214,530 FTE students, Wisconsin's total enrollment in higher education was the 11th largest in the nation in 1984.

Institutional Finances and Characteristics

In terms of total E&G revenues (excluding government contracts), public institutions in Wisconsin received per-student funding that was 2 percent above national levels. This is largely the result of above-average state funding (index 106) and tuition revenues (index 109). However, the distribution of these funds was quite uneven, and four sectors functioned with below-average funding (from 4 to 18 percent) while two others received 7 to 50 percent more than similar institutions elsewhere. The nonmedical university (University of Wisconsin--Milwaukee) was the most underfunded compared to national averages and operated with 18 percent less per student than the norm. The University of Wisconsin--Madison obtained 6 percent less in operating support than average for medical research universities and, in addition, had greater expenses due to its above-average emphasis on graduate education. The comprehensive institutions received revenues that were below average (by 10 percent). The general baccalaureate schools secured 7 percent more funding than average. The two-year occupational schools were the best funded and functioned with 50 percent more in funds than the average for this sector.

Total revenues for institutions in the private sector were 5 percent better than average, although there are major variations in funding among different types of institutions. Only Marquette University functioned with significantly below-average funding.

Faculty salaries in Wisconsin were at national levels in the public sector in 1983 but were 9 percent below average in the private sector. Although Wisconsin's increases in faculty salaries from 1979 to 1983 were similar to national rates, differences by rank were evident; in comparison with similar faculty elsewhere, faculty in the lower ranks fared better than did full professors.

Data Notes

1983-84

Additional State and Local Government Funding for Higher Education
Current Operations

The amounts shown below are included in the "State and Local Government Support of Higher Education" section on the first data page for your state. (The dollar amounts shown on the first data page are shown in per capita terms.)

Student Aid	$ 45,551,368
Postsecondary vocational technical education	$
State boards and commissions	$
Centralized retirement or fringe benefits	$
Interstate contracts and reciprocity payments	$
Service functions provided centrally (e.g., computer service, library, telephone, etc.)	$
Centrally administered capital/debt service	$
Other (University extension)	$

Clarification of Institutional Financial Reporting

These funds are noted here to clarify differences in practices among the states that affect the comparability of these data.

Capital Outlays	$ 98,015,173
Debt service that is part of state and local Sources:	$ 65,481,898
- state appropriations centrally allocated	$ 29,985,964
- state and local appropriations to institutions	$ 76,000,428
- tuition and fees	$ 0
- auxiliary enterprises	$ 26,590,446
- other	$ 30,912,233

Tuition and Fees reappropriated by the state? Yes

Other Comments

(Indexes shown in bold are based on U.S. average = 100)

WYOMING

Recent Trends

Wyoming led the nation in improving funding for state institutions between 1980 and 1984. Appropriations increased 96.6 percent, almost three times the national average. Enrollments also increased by 23.6 percent during this period, the second-highest increase in the nation. Even after adjustments for enrollment growth and inflation, these appropriations represented an impressive 16.5 percent increase per student in constant dollars. Although increases in tuition lagged behind inflation (by 16.0 percent), total educational and general revenues per student in constant dollars still increased 15.3 percent, the highest increase in the nation.

This is a marked improvement over the four-year period 1978 to 1982 where Wyoming experienced the nation's worst decline in total educational and general revenues per student in constant dollars.

State Financing of Higher Education

Appropriations per student of $6,606 were 79 percent above average in 1984, ranking Wyoming 3rd in the nation in this measure. Public institutions received low tuition revenues but substantial funding from private gifts and grants and from other sources. Thus, total funding per student was 68 percent above average, ranking Wyoming 2nd in the nation.

State Tax Base and Budget

Wyoming has a very high tax potential and had a tax capacity of $2,432 per capita in 1983, second-highest in the nation. This was 82 percent above the national average of $1,176. The state had above-average capacity for all types of taxes, with the potential for severance-tax revenues being 21 times the national average.

Wyoming's tax effort was also high, 13 percent above the national average, ranking the state 8th in the nation. (In 1981, Wyoming's tax effort was 27 percent below average, with a state rank of 49th.) The state taxed general sales, licenses, and property above national rates. Wyoming has no individual income or corporate income tax, in 1983 losing an estimated $164 million in potential revenues as a result. As a result of the high capacity and high effort, Wyoming yielded collected tax revenues of $2,432 per capita, twice the national average. As a result, Wyoming ranked 2nd in the nation in tax funds available to support public services.

If the total operating budget of Wyoming (including nontax and federal transfers) is considered, highways, elementary/secondary, and higher education received larger shares of the budget relative to national average allocations. Public welfare and health and hospitals received proportionately smaller shares. Between 1980 and 1984, higher education's share of the budget dropped from 22 percent above average to 6 percent above average.

Higher Education Enrollments

The eight public colleges and universities in Wyoming enrolled 17,559 FTE students in fall 1983. University enrollment, as a share of the public total, was proportionately much larger than the national mix (52.7 versus 30.3 percent). Wyoming has no institutions classified as four-year colleges or independent colleges by this study. Two-year college enrollment was proportionately much larger than the national mix (47.3 versus 38.1 percent).

In 1983, Wyoming had a nearly average number of high school graduates per 1,000 population compared to the nation.

Institutional Finances and Characteristics

The University of Wyoming enrolled over half of the public students in the state. In 1982, the state appropriated $3,294 per student to the university, equal to the national average. In 1984, appropriations of $7,727 per student were twice the national average. Tuition revenues at the university were low, 39 percent below average, while private gifts and grants were 3.7 times the national average, and other revenues were over 5 times the average. As a result, total educational and general revenues per student at the university were over twice as high as the national average. The expenditure pattern of the university was correspondingly high. Public-service expenditures per 1,000 capita were 18 times the national average.

The six public two-year academic colleges in Wyoming received 2.4 times the national average in state funding (ranked 2nd among 46 states). Instructional expenditures of $3,360 per student were ranked 2nd highest in the nation.

Between 1979 and 1983 faculty salaries in Wyoming's public institutions increased at a rate 29 percent above the national average. Salaries were above average in the upper ranks in 1983 for all types of institutions.

(Indexes shown in bold are based on U.S. average = 100)

APPENDIX A: LISTING OF INSTITUTIONS BY CLASSIFICATION, CONTROL, AND STATE

Description of the Institutional Classification System

Most earlier studies of higher education financing have used a three-category institutional classification system--university, four-year, and two-year institutions--prompted largely by the use of these categories by the National Center for Education Statistics (NCES). Given the substantial differences among higher education institutions in terms of their relative emphasis on different levels and fields of study and the implications of these differences for financial comparisons, this study uses a more detailed classification, based on ten different institutional categories, plus a distinction between the public and private/independent sectors.

This classification procedure was developed by NCHEMS, and is modified here to identify separately doctoral institutions that offer first-professional health science programs (that is, medicine, dentistry, osteopathy, and veterinary medicine). NCHEMS uses an explicit set of empirically based criteria that are applied objectively by computer analysis to identify each institution's category.

The criteria are based on:

- The number of degrees earned, by type of degree (associate, bachelor's, master's, doctorate, and first professional) as an indication of the institution's *commitment* to the levels of education offered (for example, postbaccalaureate, undergraduate).
- The number of fields in which degrees were earned. This measure is an indication of the *diversity* of program offerings at an institution.
- The ratio of degree completions in several specific fields to total degree completions. This is an indication of *program emphasis* at an institution.
- Research expenditures as an indication of the centrality of *research* activities to the mission of a campus.
- For the purposes of this study, an additional criterion was used to distinguish whether medical-related activities were an integral part of the educational mission of the institution. The granting of professional doctoral degrees in the fields of medicine, dentistry, osteopathic medicine, or veterinary medicine places campuses in the category "with medical" as contrasted to "without medical." This criteria was applied only to universities (that is, research universities and universities).

This classification process uses the Higher Education General Information Survey (HEGIS) data on degrees and finances, which were obtained from NCES. Only those institutions reported in the HEGIS universe are included. Many nonresponding single-program occupational schools are therefore not included in this universe.

In identifying "campus units" for classification, the study relied on the reporting units used by NCES in the HEGIS surveys. This caused some problems for branch campuses that were separately classified based on their own degree-granting activities and *not* on the basis of those at the parent institution. Several institutions reported enrollment and financial data but did not report degrees conferred. These institutions were hand classified into appropriate categories based upon input from their respective state agency and judgment as to where such institutions belonged in the classification scheme. In addition, several other institutions reporting degrees conferred were hand classified because of the unique nature of the institution (for example, Rockefeller University in New York and the Georgia Institute of Technology).

The major categories in the NCHEMS institutional classification system and numbers of institutions by category and control in this study are:

Categories of Institutions	**Public**	**Independent**
Research univ., medical	36	18
Research univ., nonmedical	17	6
University, medical	21	13
University, nonmedical	38	23
Comprehensive	258	164
General baccalaureate	113	529
2-year academic & comprehensive	625	99
2-year occupational	329	85
Health professional	30	20
Other professional & specialized	31	288
Total	1,498	1,245

The criteria used in classifying institutions by these categories are as follows:

Research Universities

These institutions are characterized by a significant level of activity in and commitment to doctoral-level education as measured by the number of doctorate recipients and the diversity in doctoral program offerings and by engaging in a significant level of research activities. To be classified as a research university, an institution must grant a minimum of 30 doctoral-level degrees in three or more doctoral-level program areas [1] on an annual basis or, alternatively, have an interdisciplinary program at the doctorate level. Included in the counts of doctorate degrees are the first professional (M. D., D. D., D. V. M., D. D. S.). In addition to meeting the criteria on degrees, a research university must rank among the top 75 institutions in the country in research expenditures. For this study, exceptions have been made to include Rockefeller University and Georgia Institute of Technology Main Campus in this category because of their doctoral program emphasis and substantial level of research; thus, there are 77 research universities used in this study.

Universities

These institutions meet all of the criteria stated above, except they are not as significantly involved in research activities as the research universities.

Comprehensive Institutions

These institutions are characterized by a strong, diverse postbaccalaureate program (including first professional) but do not engage in significant doctoral-level education. Specifically, this category includes institutions not considered specialized schools in that the number of doctoral-level degrees granted is less than 30 or in that fewer than three doctoral-level programs are offered. In addition, these institutions must grant a minimum of 30 postbaccalaureate [2] degrees and either grant degrees in three or more postbaccalaureate programs, or alternatively, have an interdisciplinary program at the postbaccalaureate level.

General Baccalaureate Institutions

These institutions have, as their primary emphasis, general undergraduate, baccalaureate education. They are not significantly engaged in postbaccalaureate education. Included are institutions not considered specialized institutions, in which the number of postbaccalaureate degrees granted is less than 30 or in which fewer than three postbaccalaureate level programs are offered, but either (a) grant baccalaureate degrees and grant degrees in three or more baccalaureate programs, or (b) offer a baccalaureate program in interdisciplinary studies.

Two-Year Institutions

Institutions that confer fewer than 25 percent of their degrees at the baccalaureate or postbaccalaureate level, and that confer over 75 percent of their degrees or awards for two years of work, or formal awards and completions requiring less than two years of work, are considered two-year institutions. Institutions with a two-year upper division program would *not* fall in this category because they grant baccalaureate degrees.

(1) Academic/Comprehensive: Institutions in which the number of degrees awarded in the academic area (5600 field in the HEGIS Taxonomy) is at least 80 percent of all degrees awarded.

(2) Occupational: Institutions in which degrees or awards in two or more occupational programs are conferred and that grant less than 20 percent of their degrees in the academic area (5600 field in the HEGIS Taxonomy).

Health Professional Institutions

Institutions in which health science education is the primary objective and that confer first-professional medical degrees such as M. D., D. O., D. D. S., and D. V. M. constitute medical institutions. These institutions are those (a) in which the number of professional health science degrees (medicine, dentistry, optometry, pharmacy, and so on) granted plus the number of other health science degrees (1200 field in the HEGIS Taxonomy) exceeds 60 percent of all degrees awarded, or alternatively, in which the number of such degrees awarded exceeds 50 percent of all degrees awarded and the number of baccalaureate programs offered is fewer than five, and (b) in which one of the following first-professional medical degrees is conferred: M. D., D. D. S., D. O., or D. V. M.

Other Professional and Specialized Institutions

This category includes a diverse group of specialized institutions. For purposes of the study, they have been collapsed into a single category. The more detailed distinctions are:

---

[1] Programs or program areas are a major field of study as defined at the two-digit level of the HEGIS Taxonomy of Programs.

[2] Includes master's, doctoral, and first-professional degrees.

(1) *Other Health Institutions* - Institutions in which health science is the primary objective but that do *not* confer an M. D., D. D. S., D. O., or D. V. M. These institutions are those that satisfy criterion (a) above, but do not award any one of the following first-professional medical degrees: M. D., D. D. S., D. O., or D. V. M.

(2) *Education Schools* - Institutions in which over 60 percent of the degrees are conferred in education (0800 field in the HEGIS Taxonomy), or alternatively, in which the number of such degrees awarded exceeds 50 percent of all degrees awarded and the number of baccalaureate programs offered is fewer than five.

(3) *Engineering Schools* - Institutions in which either the number of degrees awarded in the area of engineering (0900 field in the HEGIS Taxonomy) exceeds 60 percent of all degrees awarded, or alternatively, in which the number of such degrees awarded exceeds 50 percent of all degrees awarded and the number of baccalaureate programs offered is fewer than five.

(4) *Divinity Institutions* - Institutions in which either the number of professional theological degrees plus the number of other degrees granted in theology (2300 field in the HEGIS Taxonomy) exceeds 60 percent of all degrees awarded, or alternatively, in which the number of such degrees awarded exceeds 50 percent of all degrees awarded and the number of baccalaureate programs offered is fewer than five.

(5) *Business and Management Schools* - Institutions in which over 60 percent of the degrees are conferred in the area of business and management science (0500 field in the HEGIS Taxonomy), or alternatively, in which the number of such degrees awarded exceeds 50 percent of all degrees awarded and the number of baccalaureate programs offered is fewer than five.

(6) *Art, Music, and Design Schools* - Institutions in which over 60 percent of the degrees are conferred in the area of art, music, and/or design (1000 field in the HEGIS Taxonomy), or alternatively, in which the number of such degrees awarded exceeds 50 percent of all degrees awarded and the number of baccalaureate programs offered is fewer than five.

(7) *Law Schools* - Institutions in which either the number of professional law degrees (L. L. B. or J. D.) plus the number of other degrees awarded in law (1400 field in the HEGIS Taxonomy) exceeds 60 percent of all degrees awarded, or alternatively, in which the number of such degrees awarded exceeds 50 percent of all degrees awarded and the number of baccalaureate programs offered is fewer than five.

(8) *Other Specialized or Professional Schools* - Institutions that grant degrees in *fewer than three programs* at the baccalaureate level, master's level, and the doctorate level and do *not* confer over 50 percent of their degrees in any of the above categories.

(9) *U.S. Service Schools* - Although these schools are separately categorized here, they were *excluded* from the study.

There follows a listing of all campuses included in this study, by institutional category and state. The states are shown in alphabetical order. The institutions listed include any campus that reported HEGIS data to NCES during the years FY80 through FY84 that are used in this study.

APPENDIX B: DATA SOURCES AND CAUTIONS

Section One: Data Sources and Definitions

To facilitate the cross-reference of data sources with the state profiles, the attached data-sources information is referenced on a page-by-page basis for the seven data pages.

FIRST DATA PAGE - STATE FINANCING OF HIGHER EDUCATION

Section: State and Local Government Support of Higher Education 1984 (Per Capita)

Student Aid

Source: Special survey of states conducted by NCHEMS in February 1985 entitled, "Survey of Selected State Funding for Postsecondary Education," Boulder, Colo., 1985.

Funds that are appropriated to and expended for student aid through acts of state and local governments for outright scholarship grants, fellowship stipends, and work-study to individuals enrolled in formal coursework, either for credit or not. These funds are provided *directly* to students. They do not include state appropriations to institutions for student aid. Includes both merit (academic and athletic) and need-based awards to students at the undergraduate and graduate level attending in-state institutions.

General Institutional Support

Source: Special survey of states conducted by NCHEMS in February 1985 entitled; "Survey of Selected State Funding for Postsecondary Education," Boulder, Colo., 1985.

State appropriations or grants and contracts to public and independent institutions fo all non-capital operating expenses. These funds exclude student aid, capital outlays, and debt service.

Other

Source: Special survey of states conducted by NCHEMS in February 1985 entitled, "Survey of Selected State Funding for Postsecondary Education," Boulder, Colo., 1985.

State and local government appropriations for higher education, excluding those for student aid noted above and institutional appropriations as represented in the HEGIS reporting universe. This category reports *other* government support for higher education operations *not reported through HEGIS*. Included are appropriations for operating expenses for postsecondary vocational-technical institutions not listed in the HEGIS universe; support for the operating expenses of postsecondary education coordinating boards, governing boards, boards of trustees, system offices, or similar organizations not reported through HEGIS; certain reciprocity payments to other states; support for the operation of centralized services (library, computing, extension); and state and locally paid fringe benefits and retirement payments that do not flow directly through instructional accounts.

Total

Source: Derived measure.

The sum of state and local support provided for student aid, general institutional support, and other.

Population

Source: U.S. Bureau of the Census. "State Population Estimates, by Age and Components of Change: 1980 to 1984." In *Current Population reports*, Series P-25, No. 970. Washington, D.C.: U.S. Government Printing Office, 1985.

Per-capita measures are used throughout the study and utilize these population figures. Estimates of state population are conducted annually by the U.S. Census Bureau and the states under the Federal-State Cooperative Program. The count represents individuals who, at the time of the survey, considered the given place their usual residence. Residence is interpreted here as the place a person lives and sleeps rather than the legal or voting residence.

State and Local Tax Capacity, Effort, and Revenues

Source: Advisory Commission on Intergovernmental Relations. *1983 Tax Capacity of the States.* Washington, D.C.: ACIR, 1986.

See definitions in section entitled "Tax Capacity and Effort 1983."

Percent Allocated to Higher Education

Source: Derived measure.

Percent calculated by dividing the total state appropriation by tax revenues.

State and Local Appropriations to Higher Education Per Capita

Source: Derived measure.

The sum of state and local support provided for student aid, general institutional support, and "other," divided by the state's population. These appropriations are shown separately for public and independent institutions, where state record-keeping practice permits a separate distinction. Where this information is not available, the figures are shown under "not identified by sector."

It should be noted that for this study the HEGIS universe of institutions has been modified in two ways. First, all U.S. service schools such as West Point and the U.S. Air Force Academy have been *excluded* from the analysis because they do not receive state funds and because their inclusion would dramatically distort state sector averages. Second, all institutions in the U.S. territories (for example, Puerto Rico) are not included because the territories are not "states."

Section: Demographics

Population

Source: U.S. Bureau of the Census. "State Population Estimates, by Age and Components of Change: 1980 to 1984." In *Current Population Series* P-25, No. 970. Washington, D.C.: U.S. Goverment Printing Office, 1985.

High School Graduates

Source: Halstead, D. Kent. *How States Compare in Financing Higher Education 1984-1985.* Washington, D.C.: NIE, May 1985.

High School Graduates (per 1,000 population)

Source: Derived Measure.

Total FTE Enrollment

Source: NCES. *HEGIS XVI: Fall Enrollment in Institutions of Higher Education, 1983.* Washington, D.C.: NCES, 1983. (Magnetic Tape.)

FTE enrollment figures are based on the sum of full-time men plus full-time women plus an FTE of part-time students (as reported by institutions)--that is, line 14, columns 13 and 14; and line 28, column 15 on the survey form. (For institutions that do not report the FTE of part-time students, FTE is calculated by summing part-time men and part-time women, and dividing by three.)

Section: State and Local Government Direct General Expenditures by Function 1984

Expenditures by Category

Source: U.S. Bureau of the Census. *Governmental Finances in 1983-84.* Series GF84, no. 5. 1985.

Higher Education - Facilities and activities of all educational institutions beyond the high school level operated by state or local governments, except that agricultural experiment stations and agricultural extension services are classed under natural resources, and university-operated hospitals serving the public are classed under hospitals.

Elementary/Secondary - Comprises payments for operation of elementary and secondary schools. Construction of school buildings, purchase and operation of school buses, and other local school services. Also includes direct state expenditures for state educational administration and services, tuition grants, fellowships, aid to private schools, and special programs.

Highways - Streets, highways, and structures necessary for their use, street lighting, snow and ice removal, toll highway and bridge facilities, and ferries.

Public Welfare - Support of and assistance to needy persons contingent upon their need. Excludes pensions to former employees and other benefits not contingent on need.

Health and Hospitals - Health services, including health research, clinics, nursing, immunization, and so on. Hospitals include the establishment and operation of hospital facilities, provision of hospital care, and support of public or private hospitals.

Public Services - Services for the public, including police protection, fire protection, libraries, sewerage, and natural resources and parks.

Other - Categories include veterans services, air transportation, corrections, housing and urban renewal, governmental administration, interest on debt, and all other general expenditures.

Section: Tax Capacity and Effort 1983

Tax Capacity

Source: Advisory Commission on Intergovernmental Relations. *1983 Tax Capacity of the States.* Washington, D.C.: ACIR, 1986.

Tax capacity is calculated using a representative tax system. Tax capacity of a state and its local governments is defined as the amount of revenue they could raise (relative to other state-local governments) if all 50 state-local systems applied identical tax rates (national averages) to their respective tax bases. Tax capacity is expressed as an index relative to the U.S. at 100. Tax bases include general sales, selective sales and gross receipts, licenses, individual income, corporate net income, property, death and gift, and severance. For a full description of tax capacity, see the source document.

Tax Effort

Source; Advisory Commission on Intergovernmental Relations. *1983 Tax Capacity of the States.* Washington, D. C.: ACIR, 1986.

Measures the extent to which tax capacity is actually used, and is expressed as the percentage relation between actual amounts of tax revenues collected by governments compared to tax capacity. Since the nationwide effort measure is 100 percent, the effort values for various states actually indicate how states compare in tax-effort performance to the national average.

Potential Amounts

Source: Advisory Commission on Intergovernmental Relations. *1983 Tax Capacity of the States.* Washington, D. C.: ACIR, 1986.

The absolute-dollar amount of tax capacity based on the total economic base of state and local governments as measured by the representative tax system.

Collected Amounts

Source: Advisory Commission on Intergovernmental Relations. *1983 Tax Capacity of the States.* Washington, D. C.: ACIR, 1986.

Compulsory contributions exacted by state and local governments for public purposes. Includes interest and penalties but excludes refunds. *Nontax revenues* such as fees and charges, special assessments, rents, royalties, fines, interest earnings, and net profits from government-operated electric utilities, gas and water companies, liquor stores, and grain elevators *are excluded.*

Over (Under) Utilized Amounts

Source: Advisory Commission on Intergovernmental Relations. *1983 Tax Capacity of the States.* Washington, D. C.: ACIR, 1986.

The difference between potential tax capacity and actual taxes collected.

Percent Distribution of Capacity

Source: Advisory Commission on Intergovernmental Relations. *1983 Tax Capacity of the States.* Washington, D. C.: ACIR, 1986.

Shows the share of potential tax revenues attributable to each tax source for the state, and U. S. average.

Amounts Per Capita

Source: Advisory Commission on Intergovernmental Relations. *1983 Tax Capacity of the States.* Washington, D. C.: ACIR, September 1983.

State and U. S. tax capacity and revenue are expressed in per-capita amounts.

Tax Categories

Source: Advisory Commission on Intergovernmental Relations. *1983 Tax Capacity of the States.* Washington, D. C.: ACIR, 1986.

General Sales - Sales and gross receipts for retail trade and service businesses, such as hotels, personal services, and amusement establishments.

Selective Sales - Taxes on sales and gross receipts for motor fuels, alcoholic beverages, tobacco products, insurance, public utilities, parimutuel turnover from horse and dog racing, and amusement-related receipts such as from movie theaters.

Licenses - Taxes on motor vehicles, motor-vehicle operators, for incorporation of businesses, retail licenses for the sale of distilled spirits, and hunting and fishing licenses.

Individual Income - Taxes on individuals measured by income and taxes distinctly imposed on special types of income (e. g., interest, dividends, intangibles).

Corporate Net Income - Corporate income allocated among states based on three factors: retail receipts, payroll, and corporate property. Typically, equal weights (one-third) are applied to each of these factors. However, data for corporate property and sales by state were not available, and proxies were used to estimate these factors in the formula for each industry. Payroll data, by industry, by state, and retail sales data formed the basis for the proxies that were utilized.

Property Tax - The property taxes are separated into four different components--residential, commercial, farm, and public utilities--each of which was estimated separately. Three classes are reported separately in this study: residential, commercial, and farm.

a) *Residential* - Estimated sales value of specified owner- and renter-occupied property.
b) *Commercial and Industrial* - Estimated net book value of depreciable assets, inventories, depletable assets, and land of corporations.
c) *Farm Real Estate* - Estimated value of farm land and buildings.
d) *Public Utilities* - Gas-utility plant values allocated among states according to miles of gas pipeline, telephone plant values allocated among states according to number of telephones, and electric-plant values allocated among states according to electrical generating capacity in kilowatts. Public utilities

are not separately reported but are included in the total.

Death and Gift – Value of taxable estate.

Severance – Taxes imposed distinctively on the removal of natural products--e. g., oil, gas, and other minerals. This is not a measure of reserves.

SECOND AND THIRD DATA PAGES – PUBLIC AND INDEPENDENT INSTITUTIONS: STATUS REPORT

Sections: State and Local Finances

Abstracted from first data page – for public and independent institutions separately.

Section: FTE Enrollments

Source: NCES. *HEGIS XVII: Fall enrollment in Institutions of Higher Education, 1983* Washington, D. C.: NCES 1983. (Magnetic Tape.)

Sum of full-time men plus full-time women plus a full-time equivalent of part-time students (as reported by institutions)--that is, line 14, columns 13 and 14; and line 28, column 15 on the survey form. (For institutions that do not report the FTE of part-time students, FTE is calculated by summing part-time men and part-time women and dividing by three.)

Section: Institutional Revenues

State and Local Appropriations

Source: NCES. *HEGIS XVII: Financial Statistics of Institutions of Higher Education for Fiscal Year Ending 1984.* Washington, D. C.: NCES, 1984. (Magnetic Tape.)

Appropriations equal the sum of Part A, lines 3 and 4, of the HEGIS finance survey. Grants or contracts are excluded. Dollars appropriated or made available by state and local governments to public or private institutions of higher education for current operating expenses and not for scientific projects or programs. Federal appropriations received through state channels should be included in the total for federal appropriations. Tuition and fees collected by the institution and returned to the institution in the form of appropriations (that is, reappropriated tuition and fees) should have been subtracted, as they are already reported under tuition and fees.

Tuition Revenues

Source: NCES. *HEGIS XVII: Financial Statistics of Institutions of Higher Education for Fiscal Year Ending 1984.* Washington, D. C.: NCES, 1984. (Magnetic Tape.)

Part A, line 1, of the HEGIS finance survey. All tuition and mandatory fees assessed against students for current operating purposes. Includes tuition and fee remissions or exemptions even when there is no intention of collecting from the student. Includes those tuitions and fees that are remitted to the state as an offset to the state appropriations. (Charges for room, board, and other services rendered by auxiliary enterprises are not reported here.)

Private Gifts, Grants, and Endowment Income

Source: NCES. *HEGIS XVII: Financial Statistics of Institutions of Higher Education for Fiscal Year Ending 1984.* Washington, D. C.: NCES, 1984. (Magnetic Tape.)

Part A, lines 11, 12, 13, and 14, of the HEGIS finance survey. Private gifts and grants include revenues from private donors for which no legal consideration is involved. Private contracts include those funds for which specific goods and services must be provided to the funder as stipulation for receipt of the funds. Includes only those gifts, grants, and contracts that are directly related to instruction, research, or public service. Monies received as a result of gifts, grants, or contracts from a foreign government are included. Endowment income includes the unrestricted income of endowment and similar funds; the restricted income of endowment and similar funds to the extent expended for current operating purposes; and income from funds held in trust by others under irrevocable trusts. Capital gains or losses are not included.

Other E&G (Excluding Government Contracts)

Source: NCES. *HEGIS XVII: Financial Statistics of Institutions of Higher Education for Fiscal Year Ending 1984.* Washington, D. C.: NCES, 1984. (Magnetic Tape.)

Part A, lines 2, 15, and 18, of the HEGIS finance survey. Includes revenues from federal appropriations, sales and services of educational activities, and "other." Federal appropriations include all amounts received from or made available to the institutions through an act of Congress, except grants or contracts. These funds are for meeting the current operating expenses and not for specific projects or programs. Examples are federal land-grant appropriations and federal revenue-sharing funds. BEOGs should not be included. Sales and services of educational activities include revenues derived from the sale of goods and services that are incidental to the conduct of instruction, research, or public service. Examples include film rentals, scientific and literary publications, testing services, university presses, and dairy products. "Other" sources includes all items of revenue not covered elsewhere. Examples are interest income and gains (net of losses) from investments of unrestricted current funds. Includes revenues resulting from the sales and services of internal service departments to persons or agencies external to the institution.

Total E&G (Excluding Government Contracts)

Source: NCES. *HEGIS XVII: Financial Statistics of Institutions of Higher Education for Fiscal Year Ending 1984.* Washington, D. C.: NCES, 1984. (Magnetic Tape.)

Part A, the sum of lines 1, 2, 3, 4, 11, 12, 13, 14, 15, and 18. This is the same definition as for Total E&G revenues, except government grants and contracts are excluded.

Government Grants and Contracts

Source: NCES. *HEGIS XVII: Financial Statistics of Institutions of Higher Education for Fiscal Year Ending 1984.* Washington, D. C.: NCES, 1984. (Magnetic Tape.)

Part A, the sum of lines 5, 6, 7, 8, 9, and 10, of the HEGIS finance survey. Includes revenues from governmental agencies (federal, state, and local), that are for specific research projects or other types of programs such as student aid. Examples are research projects, training programs, and similar activities for which amounts are received or expenditures are reimbursable under the terms of a government grant or contract. Includes indirect costs recovered. Pell Grants are excluded.

Faculty counts are taken from the following source: NCES. *HEGIS XVI: Salaries, Tenure, and Fringe Benefits of Full-time Instructional Faculty, 1982-83.* Washington, D. C.: NCES, 1982. (Magnetic Tape.) Headcount of instructional faculty on 9- to 10-month contracts. Does *not* include faculty on 11- to 12-month contracts. If significant numbers of faculty are so employed, these figures will be overstated due to the undercounting of faculty.

Total E&G Revenues

Source: NCES. *HEGIS XVII: Financial Statistics of Institutions of Higher Education for Fiscal Year Ending 1984.* Washington, D. C.: NCES, 1984. (Magnetic Tape.)

Part A, the sum of lines 1 through 15, and 18. Consists of current funds revenues from state and local appropriations; tuition income; government grants and contracts; private gifts, grants, and endowment income; sales and services of educational activities; and other revenues. Excluded from E&G revenues are income from sales and services of auxiliary enterprises, sales and services of hospitals, independent operations, and revenues for capital purposes. E&G funds include only those funds intended for operating purposes. Pell Grants are excluded.

Percent Distribution: Institutional Revenues

Source: Derived measure.

This measure shows the share of revenues provided by each source. The next-to-last column is an intermediate total, with the final share contributed by government grants and contracts.

Section: Institutional Expenditures

Instruction

Source: NCES. *HEGIS XVII: Financial Statistics of Institutions of Higher Education for Fiscal Year Ending 1984.* Washington, D. C.: NCES, 1984. (Magnetic Tape.)

Part B, line 1. Instruction expenditures of the colleges, schools, departments, and other instructional divisions of the institution, and expenditures for departmental research and public service that are not separately budgeted, should be included in this classification. Includes expenditures for both credit and noncredit activities. Excludes expenditures for academic administration where the primary function is administration (for example, academic deans). This category includes the following: general academic instruction; occupational and vocational instruction; special-session instruction; community education; preparatory and adult basic education; and remedial and tutorial instruction.

Academic Support

Source: NCES. *HEGIS XVII: Financial Statistics of Institutions of Higher Education for Fiscal Year Ending 1984.* Washington, D. C.: NCES, 1984. (Magnetic Tape.)

Part B, line 4. Academic support includes expenditures for the support services that are an integral part of the institution's primary missions of instruction, research, or public services. Includes expenditures for libraries, museums, galleries, audiovisual services, academic computing support, ancillary support, academic administration and personnel development, and course and curricular development.

Research

Source: NCES. *HEGIS XVII: Financial Statistics of Institutions of Higher Education for Fiscal Year Ending 1984.* Washington, D. C.: NCES, 1984. (Magnetic Tape.)

Part B, line 2. Research includes all funds expended for activities specifically organized to produce research outcomes and commissioned by an agency either external to the institution or separately budgeted by an organizational unit within the institution. Does not include nonresearch projects (such as training programs).

Faculty counts are taken from the following source: NCES. *HEGIS XVI: Salaries, Tenure, and Fringe Benefits of Full-time Instructional Faculty, 1982-83.* Washington, D. C.: NCES, 1982. (Magnetic Tape.)

Headcount of instructional faculty on 9- to 10-month contracts. Does not include faculty on 11- to 12-month contracts. If significant numbers of faculty are so employed, these figures will be overstated due to the undercounting of faculty.

Public Service

Source: NCES. *HEGIS XVII: Financial Statistics of Institutions of Higher Education for Fiscal Year Ending 1984.* Washington, D. C.: NCES, 1984. (Magnetic Tape.)

Part B, line 3. Public service includes all funds budgeted specifically for public service and expended for activities established primarily to provide noninstructional services that are beneficial to groups external to the institution. Examples are seminars and projects provided to particular sectors of the community. Includes expenditures for community services and cooperative extension services.

Other E&G Expenditures

Source: NCES. *HEGIS XVII: Financial Statistics of Institutions of Higher Education for Fiscal Year Ending 1984.* Washington, D. C.: NCES, 1984. (Magnetic Tape.)

Part B, lines 6, 7, 8, 9, 10, and 11. Includes student services, institutional support, operation and maintenance of plant, scholarships and fellowships, and E&G mandatory transfers. For complete definitions, please see the HEGIS finance form.

Total E&G Expenditures

Source: NCES. *HEGIS XVII: Financial Statistics of Institutions of Higher Education for Fiscal Year Ending 1984.* Washington, D. C.: NCES, 1984. (Magnetic Tape.)

Part B, line 12. Educational and general expenditures include current fund expenditures for instruction, research, public service, academic support, student services, institutional support, operation and maintenance of plant, scholarships and fellowships, and educational and general mandatory transfers. Educational and general expenditures exclude expenditures for auxiliary enterprises, hospitals, and independent operations.

FOURTH DATA PAGE - TRENDS

Section: State and Local Appropriations Diagram

Dollars

Source: NCES. *HEGIS XIII-XVII: Financial Statistics of Institutions of Higher Education for Fiscal Year Ending 1980-1984.* Washington, D. C.: NCES, 1980-1984. (Magnetic Tape.)

Shows graphically the percentage change in state and local appropriations to public institutions between 1980 and 1984.

Enrollments

Source: NCES. *HEGIS XII-XVI: Fall Enrollment in Institutions of Higher Education, 1979-1983.* Washington, D. C.: NCES, 1979-1983. (Magnetic Tape.)

Shows graphically the percentage change in public FTE enrollments between 1979 and 1983, the relevant academic period corresponding to the fiscal-year data used in this report.

Constant Dollars per Student

Source: "Higher Education Prices and Price Indexes: 1984 Update." Research Associates of Washington, Washington, D. C., September 1984.

Takes the foregoing data on appropriations and enrollments and adjusts for inflation, using the Higher Education Price Index (HEPI). The HEPI measures average changes in the prices of goods and services purchased by colleges and universities through current fund E&G expenditures (excluding expenditures for sponsored research and auxiliary enterprises). The following table shows the index values used and the percentage increase for the years of this study.

Year	HEPI	HEPI Increase		
1980	185.3	1980-84	36.6%	
1981	205.2	1983-84	5.4%	1971=100
1982	225.8	1982-83	6.3%	
1983	240.1	1981-82	10.0%	
1984	253.1			

Section: Enrollment Mix Pie Diagram

Source: NCES. *HEGIS XII and XVI: Fall Enrollment in Institutions of Higher Education, 1979 and 1983.* Washington, D. C.: NCES, 1979 and 1983. (Magnetic Tape.)

Using the institutional classification system described in appendix A, the distribution of enrollments by institutional type in the public and private sectors are calculated and shown separately for 1983 and for 1979. 1979 figures are in parentheses.

Section: State and Local Appropriations and Enrollments

These measures are the same as those shown previously, except in this section the absolute amounts for 1984 for appropriations (and for fall 1983 for enrollments) are shown, along with percentage change for the four-year period 1980 to 1984 and for yearly changes for 1983 to 1984, 1982 to 1983, and 1981 to 1982.

Section: A Comparison of Tuition Revenues and Instruction Expenditures

These data are the same as those shown on the second and third data pages for tuition revenues and instruction expenditures. The base measures are shown in constant dollars per student. The solid white column shows the dollars per student for instruction expenditures and the cross-hatched column shows the tuition-revenue dollars per student. The percentages at the bottom of each box show the proportion of instruction expenditures that tuition represents in FY80 and FY84.

FIFTH DATA PAGE - TRENDS

Section: Constant-Dollar Revenues

The revenue categories in this section are the same as those used in the status report pages (second and third data pages). The per-student amounts have been adjusted by the HEPI to provide constant-dollar amounts. The percent changes between 1980 and 1984, as well as individual yearly changes for 1983-84, 1982-83, and 1981-82.

Section: Trends in the Mix of Support for Higher Education

The bar graphs show individually for the public and independent sectors the mix of support for the following sources: state and local appropriations, tuition revenues, government grants and contracts, private gifts, grants and endowment income, and "other" E&G revenues. The solid white column represents FY80 and the cross-hatched column is for FY84.

SIXTH DATA PAGE - FACULTY SALARIES

Average Faculty Salaries

Source: NCES. *HEGIS XVI: Salaries, Tenure, and Fringe Benefits of Full-time Instructional Faculty, 1982-83.* Washington, D. C.: NCES, 1982. (Magnetic Tape.)

Part 1, A, lines 1, 2, 3, 4, 5, and 6. Instructional faculty are defined as those members of the instruction/research staff who are employed on a full-time basis, on 9- to 10- month contracts, whose major regular assignment is instruction, including those with released time for research. Instructional faculty on sabbatical leave are to be included at their regular salaries even though they may be receiving a reduced annuity while on leave. Replacement for those on sabbatical should not be included. Total salary outlay for each rank is divided by the headcount of full-time persons at that rank. Faculty data for academic year 1983-84 normally would be used, but they were not available.

SEVENTH AND LAST DATA PAGE - INSTITUTIONAL DESCRIPTORS AND DATA NOTES

Number of Institutions

Source: NCES. *HEGIS XVII: Financial Statistics of Institutions of Higher Education for Fiscal Year Ending 1984.* Washington, D. C.: NCES, 1984. (Magnetic Tape.)

Count of institutions in each category, based on the institutional classification system described in appendix A.

Mean Size of Institutions

Source: NCES. *HEGIS XVI: Fall Enrollment in Institutions of Higher Education, 1983.* Washington, D. C.: NCES, 1983. (Magnetic Tape.)

Cumulative FTE enrollment for institutions in each category is divided by the number of institutions in that category.

Total FTE Enrollment

Source: NCES. *HEGIS XVI: Fall Enrollment in Institutions of Higher Education, 1983.* Washington, D. C.: NCES, 1983. (Magnetic Tape.)

Fall 1983 enrollment is the relevant base for FY84 financial data. The cumulative enrollment of all institutions in that category.

Percent of Enrollment by Student Level

Source: NCES. *HEGIS XVI: Fall Enrollment in Institutions of Higher Education, 1983.* Washington, D. C.: NCES, 1983. (Magnetic Tape.)

Based on FTE counts. Lower division includes the sum of first-time freshmen, other first-year and second-year undergraduate students. Upper division includes the sum of third-year and fourth-year and beyond. Unclassified undergraduate and postbaccalaureate undergraduate students are combined. Graduate includes first-professional students plus graduate-student totals. Note that part-time undergraduate students are classified as lower division since the survey does not provide a breakdown by level.

Data Notes

Source: Special survey of states conducted by NCHEMS in February 1985 entitled, "Survey of Selected State Funding for Postsecondary Education," Boulder, Colo., 1985.

"Additional State and Local Goverment Funding for Higher Education" reports absolute-dollar amounts that are the basis for the "State and Local Government Support of Higher Education" table on the first data page. The second section of these data notes, "Clarification of Institutional Financial Reporting," provides additional clarifications on reporting practices in the states. A general "Other Comments" section follows to allow for clarification of special circumstances affecting the data analysis in the state. The sources of these data notes are noted at the bottom of this section.

Section Two: Important Data Cautions

The value of this study is highly dependent on the accuracy of the data. The data used (primarily finance and enrollment data collected by the National Center for Education Statistics) are the best comprehensive data available. However certain limitations exist and should be kept in mind for proper usage and interpretation of the data. To the extent that they have been reported to NCES or to the authors, these limitations have been documented in the "Data Notes" for each state and should be taken into account in any interpretations. Other problems recognized by readers and not identified here should be brought to the authors' attention.

Inclusion of Institutions

The HEGIS universe excludes postsecondary public and proprietary-area vocational-technical institutions that are not accredited by a nationally recognized accrediting body. For states with many postsecondary institutions of this type, enrollments and state appropriations reported in this study for the collegiate universe are presented in the "Data Notes" section as total amounts only. These institutions, however, are not included in the detailed institutional categories.

Treatment of Central Administration Costs

Revenues and expenditures for administration at campus system offices are included in the finances for the parent institution. In states where administration is provided by a state postsecondary commission, similar administrative costs are *not* included. As a result, revenues and expenditures for these latter systems are somewhat understated.

Chargebacks and Central Payment of Employee Benefits

For some large university systems, a single campus may provide services to other campuses. If some form of chargeback system is not used, then the finances for the campus providing the service will be overstated, and finances for the campuses receiving services will be understated. In other cases, employee benefits are paid to a separate agency handling such funds, and consequently, they do not flow through institutional accounts.

Counts of FTE Students

The HEGIS fall enrollment survey does not establish a standard definition for "full-time-equivalent student." To the extent that institutions use different formulas, their FTE enrollment data lack comparability. And since FTE enrollment is used as a denominator for many indexes in this study, lack of comparability is a serious problem. However, it is believed that most institutions use *similar* bases for determining FTE enrollment, thereby likely reducing the seriousness of these inconsistencies.

Further problems are caused because not all institutions count enrollments on the same calendar date. Also the enrollment count is for the fall term and not the entire year. In contrast, finance data covers the entire fiscal year. Institutions with low attrition or large numbers of summer students will therefore show per-student revenues and expenditures that are overstated relative to institutions in the opposite situation. Finally, the financial data reflect noncredit instructional and other expenditures; however noncredit enrollments are not reported.

Debt Service

In some states, the capital costs of physical facilities are financed through a separate state agency; in other states, debt service is paid with current funds. For those that pay with current funds, their expenditures will be overstated in comparison to other states.

Tuition Remissions

In some states, tuition and fees are remitted to the state as an offset to state appropriations. Although the HEGIS finance survey directions clearly specify that these funds should be reported under tuition and fees and *not* under state appropriations, there is uncertainty as to whether these directions have been strictly followed. Appropriations may be overstated in some states if remitted tuition and fees are not excluded.

Tuition and fee remissions and exemptions for students should be reported under tuition and fees revenues. If not, the amounts will be understated.

Variances in Public Service

Institutions vary in the types of public-service activities they engage in. In many states, a variety of other state agencies may be providing these services (instruction in public bygiene, indigent patient care, hygiene research). To the extent that a typical state appropriations for these activities are reported, general institutional support will be overstated.

Geographical Price Adjustments

No attempt has been made in this study to adjust dollar values for differences among states in the prices paid for equivalent goods and services for higher education. Geographical price differences do exist and they are substantial, ranging from perhaps as high as 30 to 40 percent above the national average in Alaska to 15 to 20 percent below the average in certain nonmetropolitan areas of the country. In establishing a basis for interstate comparisons of purchasing power, such price differences should be taken into account. However, these data are not currently available.

Imputed Data

In some instances where institutions fail to report data, NCES imputes these numbers. The attached listing indicates by state, those institutions where one or more values in the finance data base were imputed.
